Development of Science Teachers' TPACK Ying-Shao

Hsu, 2015-05-18 Science is a subject matter that requires learners to explore the world and develop their own abilities on the basis of that exploration. As technology broadens and deepens, science teachers need to expand their Technological Pedagogical Content Knowledge (TPACK) which determines how well they use technology to help students learn science. The book details our efforts to prepare science teachers to teach with the help of technology, examining various aspects of teacher education, professional development, and teaching material preparation. It consists of three parts which focus on how TPACK is conceptually constructed within the field of science education, how teacher evaluation and teaching materials are developed and utilized based on the transformative model, and how science teachers are prepared and supported with electronic resources based on the integrative model. The book offers a valuable resource for all those working in science education as well as those readers who are interested in teacher education. Science teachers will come to know how simulations and animations can pedagogically support student learning. Practices for teachers' TPACK development, such as learning by design, evaluation and measurement, and teacher communities, are also addressed, applied and discussed in the case of science teachers. The individual chapters will provide teacher educators and researchers from all disciplines with new insights into preparing teachers for the Digital Era.

Teaching and Learning Through Inquiry Virginia S. Lee, 2023-07-03

Inquiry-guided learning (IGL) refers to an array of classroom practices that promote student learning through guided and increasingly independent investigation of complex questions and problems. Rather than teaching the results of others' investigations, which students learn passively, instructors assist students in mastering and learning through the process of active investigation itself. IGL develops critical thinking, independent inquiry, students' responsibility for their own learning, and intellectual growth and maturity. The 1999 Boyer Commission Report emphasized the importance of establishing a firm grounding in inquiry-based learning and communication of information and ideas. While this approach capitalizes on one of the key strengths of research universities—the expertise of its faculty in research—it is one that can be fruitfully adopted throughout higher education. North Carolina State University is at the forefront of the development and implementation of IGL both at the course level and as part of a successful faculty-led process of reform of undergraduate education in a complex research institution. This book documents and explores NCSU's IGL initiative from a variety of perspectives: how faculty arrived at their current understanding of inquiry-guided learning and how they have interpreted it at various levels—the individual course, the major, the college, the university-wide program, and the undergraduate curriculum as a whole. The contributors show how IGL has been dovetailed with other complementary efforts and programs and how they have assessed its impact. The book is divided into four parts: the first briefly summarizes the history of the initiative; Part Two, the largest section, describes how various instructors, departments, and colleges in a range of disciplines have interpreted inquiry-guided learning. It provides examples from disciplines as varied as ecology, engineering, foreign language, learning history, music,

microbiology physics and psychology It also outlines the potential for even broader dissemination of inquiry guided learning in the undergraduate curriculum as a whole Part Three describes two inquiry guided learning programs for first year students and the interesting ways in which NCSU s university wide writing and speaking program and growing service learning program support inquiry guided learning Part Four documents how the institution has supported instructors and how they have supported themselves as well as the methods used to assess the impact of inquiry guided learning on students faculty and the institution as a whole The book has been written with three audiences in mind instructors who want to use inquiry guided learning in their classrooms faculty developers considering supporting comparable efforts on their campuses and administrators interested in managing similar undergraduate reform efforts It will also appeal to instructors of courses in the administration of higher education who are looking for relevant case studies of reform While this is a model successfully implemented at a research university it is one that is relevant for all institutions of higher education
