

Practice tip: How to assess and support students with reading and speech sound difficulties

A school-aged child with a history of a speech sound disorder is at a significantly increased risk of reading difficulties.

**About
25-30%**

of children with reading difficulties have a history of speech sound disorders in preschool.

When assessing the reading skills of a school-aged child with a persistent speech sound disorder (or history), professionals need to go beyond just checking grapheme-phoneme links and word recognition skills, and assess:

- **motor-speech production skills**, e.g. on phonologically complex, polysyllabic words, syllable sequencing and production tasks; and
- **oral language skills**, including vocabulary, morphology, syntax, and social use in discourse.

When supporting a student with reading difficulties and a persistent speech sound disorder (e.g. childhood apraxia of speech), we should take an integrated approach combining:

- **speech sound production practice**;
- **explicit training of phoneme-grapheme links**, and blending & segmenting skills; and
- (if needed) **explicit support for oral and written expressive language development**, including at the sentence and discourse levels.
