Teaching Sign Language To Chimpanzees:

Teaching Sign Language to Chimpanzees R. Allen Gardner, Beatrix T. Gardner, Thomas E. Van Cantfort, 1989-01-01 In this volume the Gardners and their co workers explore the continuity between human behavior and the rest of animal behavior and find no barriers to be broken no chasms to be bridged only unknown territory to be charted and fresh discoveries to be made With the beginning of Project Washoe in 1966 sign language studies of chimpanzees opened up a new field of scientific inquiry by providing a new tool for looking at the nature of language and intelligence and the relation between human and nonhuman intelligence Here the pioneers in this field review the unique procedures that they developed and the extensive body of evidence accumulated over the years This close look at what the chimpanzees have actually done and said under rigorous laboratory conditions is the best answer to the heated controversies that have been generated by this line of research among ethologists psychologists anthropologists linguists and philosophers The Study of Signed Languages William C. Stokoe, David F. Armstrong, Michael A. Karchmer, 2002 This text contains papers that were presented at an October 1999 conference at Gallaudet University in honor of the 80th birthday of William C Stokoe one of the most influential language scholars of the 20th century Twenty two international specialists contribute 12 chapters on the historical con *The Mentalities of Gorillas and Orangutans* Sue Taylor Parker, Robert W. Mitchell, H. Lyn Miles, 1999-08-26 Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution In contrast less attention has been paid to the abilities of gorillas and orangutans This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees bonobos and humans The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes including performances in the classic domains of tool use and tool making imitation self awareness social communication and symbol use All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove The Study of Language George Yule, 2017 Easy to follow simple to understand broad yet concise this fundamental introduction to the study of language now includes new study questions and tasks Handbook of Psychology, Experimental Psychology Alice F. Healy, Robert W. Proctor, 2003-03-11 Includes established theories and cutting edge developments Presents the work of an international group of experts Presents the nature origin implications and future course of major unresolved issues in the area Animal Minds Donald R. Griffin, 2024-05-31 In *Animal Minds* Donald R Griffin takes us on a guided tour of the recent explosion of scientific research on animal mentality Are animals consciously aware of anything or are they merely living machines incapable of conscious thoughts or emotional feelings How can we tell Such questions have long fascinated Griffin who has been a pioneer at the forefront of research in animal cognition for decades and is recognized

as one of the leading behavioral ecologists of the twentieth century With this new edition of his classic book which he has completely revised and updated Griffin moves beyond considerations of animal cognition to argue that scientists can and should investigate questions of animal consciousness Using examples from studies of species ranging from chimpanzees and dolphins to birds and honeybees he demonstrates how communication among animals can serve as a window into what animals think and feel just as human speech and nonverbal communication tell us most of what we know about the thoughts and feelings of other people Even when they don't communicate about it animals respond with sometimes surprising versatility to new situations for which neither their genes nor their previous experiences have prepared them and Griffin discusses what these behaviors can tell us about animal minds He also reviews the latest research in cognitive neuroscience which has revealed startling similarities in the neural mechanisms underlying brain functioning in both humans and other animals Finally in four chapters greatly expanded for this edition Griffin considers the latest scientific research on animal consciousness pro and con and explores its profound philosophical and ethical implications

Becoming Wild Carl Safina, 2020-04-14 A NEW YORK TIMES NOTABLE BOOK OF 2020 In this superbly articulate cri de coeur Safina gives us a new way of looking at the natural world that is radically different The Washington Post New York Times bestselling author Carl Safina brings readers close to three non human cultures what they do why they do it and how life is for them A New York Times Notable Books of 2020 Some believe that culture is strictly a human phenomenon But this book reveals cultures of other than human beings in some of Earth's remaining wild places It shows how if you're a sperm whale a scarlet macaw or a chimpanzee you too come to understand yourself as an individual within a particular community that does things in specific ways that has traditions Alongside genes culture is a second form of inheritance passed through generations as pools of learned knowledge As situations change social learning culture allows behaviors to adjust much faster than genes can adapt *Becoming Wild* brings readers into intimate proximity with various nonhuman individuals in their free living communities It presents a revelatory account of how animals function beyond our usual view Safina shows that for non humans and humans alike culture comprises the answers to the question How do we live here It unites individuals within a group identity But cultural groups often seek to avoid or even be hostile toward other factions By showing that this is true across species Safina illuminates why human cultural tensions remain maddeningly intractable despite the arbitrariness of many of our differences *Becoming Wild* takes readers behind the curtain of life on Earth to witness from a new vantage point the most world saving of perceptions how we are all connected

AS Level Psychology Through Diagrams Grahame Hill, 2001 This text uses material from the first edition of *Advanced Psychology Through Diagrams* combined with several new pages to meet the requirements of the new AS Level examination specifications

Speaking of Apes Thomas A. Sebeok, Jean Umiker-Sebeok, 2013-03-09

Apes and Human Evolution Russell H. Tuttle, 2014-02-17 Russell Tuttle synthesizes a vast literature in primate evolution and behavior to explain how apes and humans evolved in relation to one another and why

humans became a bipedal tool making culture inventing species distinct from other hominoids He refutes the theory that we are sophisticated instinctively aggressive and destructive killer apes
