Glycoprotein Methods and Protocols Anthony P. Corfield, 2007-10-26

The mucins mucus glycoproteins have long been a complex corner of glycoprotein biology While dramatic advances in the separation structural analysis biosynthesis and degradation have marked the progress in general glycoprotein understanding the mucins have lagged behind The reasons for this lack of progress have always been clear and are only now being resolved The mucins are very large molecules they are difficult to separate from other molecules present in mucosal secretions or membranes they are often degraded owing to natural protective functions or to isolation methodology and their peptide and oligosaccharide structures are varied and complex Understanding these molecules has demanded progress in several major areas Isolation techniques that protect the intact mucins and allow dissociation from other adsorbed but discrete molecules needed to be developed and accepted by all researchers in the field Improved methods for the study of very large molecules with regard to their aggregation and polymerization were also needed Structural analysis of the peptide domains and the multitude of oligosaccharide chains was required for smaller sample sizes for multiple samples and in shorter time In view of these problems it is perhaps not surprising that the mucins have remained a dilemma of obvious biological importance and

interest but very difficult to analyze

Glycobiology and Human Diseases Gherman Wiederschain, 2016-02-22 This book discusses glycobiology and various forms of human diseases Topics covered include immunoglobulins inflammation and glycosylation the role and therapeutic significance of natural anti glycan antibodies in malignancies and in normal and aberrant pregnancy identifying urinary glycans as a possible method for the diagnosis of lysosomal st

Techniques in Protein Chemistry John W. Crabb, 2014-06-28 Techniques in Protein Chemistry V highlights current methods in peptide and protein mass spectrometry sequence and amino acid analysis fragmentations separations protein folding and modeling peptide and protein NMR and peptide synthesis This volume emerged from the manuscripts presented at the Seventh Symposium of the Protein Society held in San Diego on July 24 28 1993 This volume is organized into eight parts encompassing 61 chapters The first part surveys the peptide and protein characterization detection and analysis by mass spectrometry The subsequent parts describe the structural characterization and analysis of posttranslational processing events as well as the characterization of protein and amino acid sequences using several analytical techniques Other parts explore other analytical methods for peptide and protein separations some aspects involved in protein design and functional domain analysis and the evaluation of protein conformation folding and modeling The last parts contain research papers on NMR analysis of peptide and protein solution structures These parts also look into topics related to peptide synthesis and peptide libraries This book is intended primarily for protein and analytical chemists

Aoki-Kinoshita, 2009-11-19 A Focused State of the Art Overview of This Evolving Field Presents Various Techniques for Glycoinformatics The development and use of informatics tools and databases for glycobiology and glycomics research have increased considerably in recent years In addition to accumulating well structured glyco related data researchers have now developed semi

Methods On Glycoconjugates André Verbert, 1995-07-01 By guiding the reader toward answering basic questions on the structural analysis of glycoconjugates using conventional techniques this book studies methods such as chemical cleavage molar composition use of enzymes use of lectins and typical fractionation procedures such as HPLC GLC TLC and other chromatographic systems More sophisticated techniques such as NMR or MS are described to give the reader the essential information needed to adapt procedures to his her requirements This book will serve as a practical manual designed for scientists not familiar with glycoconjugate methodologies but whose research work requires contact with analytical problems or metabolic investigations in glycobiology It is the result of twenty years of experience of summer schools held in a laboratory environment and will acquaint the reader with widely used techniques in the area rather than cataloguing an exhaustive list of methods This will help any biochemist to develop an experiment with ease
