**The Growing Spine** Behrooz A. Akbarnia, George H. Thompson, Muharrem Yazici, Ron El-Hawary, 2022-02-03 There has been significant progress in the field of spinal disorders in very young children over the past two decades However the treatment of such conditions remains challenging due to the age of the patient different etiologies associated morbidities and the progressive nature of the deformity Depending on the etiology of the deformity these children are often cared for by multiple specialists including pediatricians pulmonologists pediatric orthopedists or orthopedic spine surgeons pediatric surgeons pediatric neurosurgeons neurologists and oncologists Health professionals in

all of the mentioned disciplines are involved in the management of these patients which is why compiling a comprehensive text that is not limited to orthopedic specialists is essential Since the second edition of this book was published there has been a significant body of literature that has been published and advances made in the care of young children with spinal and thoracic deformities This new edition will effectively help to standardize the care of these patients Furthermore other professionals such as nurses physical therapists and healthcare professionals in training are usually not familiar with these conditions and are in need of a reference book to consult when caring for young children with spinal deformities Sections are arranged thematically and comprise a comprehensive presentation of the current knowledge on disorders of the growing spine After opening sections discussing general considerations and patient evaluation and diagnosis subsequent sections describe the various categories of spinal deformity idiopathic congenital neuromuscular syndromic and others followed by surgical and non surgical management strategies both traditional and growth friendly Concluding sections address patient care and outcomes and outline future directions for research and practice

Community Series in Targeting Signalling Pathways in Inflammatory Diseases, volume II Uzma Saqib, Mirza S. Baig, Syed Faisal, Suraj P. Parihar, 2025-08-18

Protein protein interactions PPIs are involved in almost every cellular process They represent attractive targets for modulating signaling pathways leading to disease states However they are challenging to target with small molecules peptides for example due to varied reasons Although a growing number of PPIs have become validated drug targets there is only a little percentage of them have been used to successfully design potent drugs PPIs play an important role in signaling events leading to inflammation Many inflammatory diseases are solely based on specific signaling pathways inside the cells which are in turn driven by a prior event of a protein protein interaction or several protein protein interactions It has been clearly shown by many investigators across the world that targeting such interactions would be the best way to attenuate the signaling events and eventually the inflammation In the last few years various PPIs modulators have entered clinical studies some of which have been approved for marketing strengthening our idea that modulators targeting PPIs have broad prospects in clinical research The conventional methods using medicinal chemistry protocols are less effective and time consuming for designing and identifying PPI modulators Thus it is necessary to develop more effective approaches for screening the PPI modulators A wide variety of strategies including High throughput screening HTS in silico modeling and the most recent Artificial Intelligence AI could multiply the results in terms of time and effort We would like to invite potential authors researching on topics associated with studies focused on the role of protein protein interactions as well as targeting those in inflammatory signaling leading to multiple diseases including sepsis etc Articles specifically encompassing the following are welcome

- 1 Artificial Intelligence AI in PPI based drug discovery in immune mediated inflammatory disease
- 2 Novel cell based high output assays for quicker screening of novel drugs against PPI s in immune mediated inflammatory disease
- 3 Novel PPI s and their therapeutic targeting in inflammation and sepsis

Please note Bioinformatics or Computational

Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease are not in scope of this Research Topic unless they have a strong focus on the immune system This Research Topic is the second volume of the Community Series in Targeting Signalling Pathways in Inflammatory Diseases Please see the first volume here

*Handbook of Geriatrics* Steven R. Gambert,2013-06-29 As our population continues to age health professionals are being called on to care for an ever increasing number of elderly patients A thorough understanding of what constitutes normal aging versus age prevalent illness is essential In addition the atypical and nonspecific presentation of illness commonly encountered when caring for an older patient must be expected and watched for carefully In recent years the health professional has been exposed to an exponentially increasing number of publications attempting to teach geriatric principles To date few publications lend themselves to use by the busy practitioner student or nurse in search of immediate facts flow sheets and clinically applicable data It was felt that the health professional would benefit greatly from a book based on the concept of a ready reference hand book with chapters filled with tables flow sheets and listings similar in scope to those in a well presented lecture series Our goal was to create a geriatrics handbook that would have value at the bedside as well as in the classroom It is to this end that the contributors dedicated their efforts

**A COPD Primer** Ralph Panos,William Eschenbacher,2015-01-01 In 2012 we received a grant from the Veterans Health Administration Office of Specialty Care entitled Patient Centered Model for the Management of Chronic Obstructive Pulmonary Disease The grant s goals were to enhance the recognition and diagnosis of COPD and implement a Patient Centered Model for the Management of COPD As the work on that proposal progressed we realized that providers did not have an up to date comprehensive easily

read how to manual for the management of COPD despite all the advances in COPD care that have occurred over the past 5 years Consensus documents such as the VA DOD Guidelines were abbreviated summaries that were rarely used From those discussions the concept for this volume a COPD Primer developed The goal was to develop a practical book that concisely presented COPD to providers with sufficient background and explanation of the physiologic and scientific rationale for various management strategies without becoming an esoteric academic work We hope that this COPD Primer has achieved that goal and will be a useful practical text for practitioners and medical trainees alike The COPD Primer begins with an examination of what COPD is it is really a syndrome a constellation of historical features and clinical physiologic and radiographic findings However those elements come together in many different ways to create multiple different COPD phenotypes that are only now being recognized and used to define specific management strategies COPD research has progressed beyond the simple classification of blue bloaters and pink puffers Next the epidemiology and economic consequences of COPD are reviewed Bill Eschenbacher presents an approach to the patient with respiratory symptoms with detailed discussions of pulmonary function testing and how airflow limitation obstruction is identified by spirometry and the use of lung imaging to identify individuals with COPD Michael Borchers and Gregory Motz summarize current evidence implicating genetics proteolytic imbalance oxidative stress inflammation occupational and environmental exposures and innate and adaptive immune function in the pathogenesis of COPD and the implication of these findings to future treatments The single most important intervention in the prevention and treatment of COPD is smoking cessation Shari Altum Katherine Butler and Rachel Juran present a practical approach to smoking cessation utilizing motivational interviewing in combination with pharmacologic interventions Then they expand upon these concepts to provide practitioners with convenient realistic suggestions to encourage patient self management in all aspects of COPD care and overall health Ahsan Zafar reviews the natural history recently described COPD phenotypes and gender differences that clearly illustrate the broad spectrum of disease that comprises the term COPD The cover illustration highlights Dr Zafar s creative and artistic talents The extensive nonpulmonary aspects of COPD are reviewed by Ralph Panos in an examination of COPD s multi organ manifestations Next the effect of COPD on sleep and the overlap syndrome the concurrence of COPD and obstructive sleep apnea and its consequences are presented Jean Elwing examines the effect of COPD on the pulmonary vasculature with a detailed discussion of the evaluation and management of pulmonary hypertension associated with COPD COPD s effects on psychosocial functioning and familial interactions are presented by Mary Panos and Ralph Panos The focus of the Primer then shifts from manifestations to treatment with a discussion of stable COPD management With the current plethora of devices for delivering respiratory medications it is difficult for both patients and providers to sustain knowledge of their proper use Aaron Mulhall presents a practical guide to correct inhaler use that reviews all the current devices Folarin Sogbetun then reviews the management of outpatient COPD exacerbations and Nishant Gupta discusses the approach to the

patient hospitalized with COPD Because patients with COPD often see multiple subspecialty physicians in addition to their primary care providers interdisciplinary communication and coordination of care is essential for their management Sara Krzywkowski Mohn reviews the interactions between primary and specialty care for the patient with COPD with suggestions for improved communication and care coordination Finally advance care planning including palliative care and hospice is reviewed with a discussion of how end stage COPD affects not only the patient but also their family and social network This COPD Primer incorporates the knowledge that we have learned over the past several years during the development and implementation of a patient centered model for the management of COPD It was written with the explicit goal of assisting both the practicing provider and medical trainee in the care of patients with COPD      *Contemporary Geriatric Medicine*

Steven Gambert, 2012-12-06 This volume marks the first of a new series Contemporary Geriatric Medicine joining the ever growing Contemporary family As with the other Contemporary volumes our goal is to assist the reader in maintaining currency in a rapidly changing field Perhaps no field has shown such major advances in such a short time as geriatrics Over the last several years the demographic imperative has become a source of concern for many including clinicians scientists economists and health planners Our geriatric knowledge base continues to grow often making it difficult to keep abreast of advances and current therapeutic modalities Contemporary Geriatric Medicine presents the state of the art thinking regarding a variety of topics all of major concern to the health practitioner caring for the elderly person The authors for the most part serving as members of a stable editorial board have chosen topics that should have immediate interest to the readership By having a stable editorial board continuity is ensured in successive volumes Every two years a subsequent issue will either address new thoughts on already presented topics or focus on new topics of current interest As with the other Contemporary series volumes the every other year interval is intended to allow new findings to develop and be tested It also provides the authors with time to provide the highest quality of work
