Skeptical Environmentalist Measuring The Real State Of The World:

The Skeptical Environmentalist Bjørn Lomborg, 2001-08-30 The Skeptical Environmentalist challenges widely held beliefs that the environmental situation is getting worse and worse The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems The Skeptical Environmentalist offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media

information from and about business academic and government perspectives and is intended to serve as a tool for unifying and systematizing research and analysis in business universities and government Integral Ecology Sean Esbjorn-Hargens, Ph.D., Michael E. Zimmerman, Ph.D., 2011-03-08 Today there is a bewildering diversity of views on ecology and the natural environment With more than two hundred distinct and valuable perspectives on the natural world and with scientists economists ethicists activists philosophers and others often taking completely different stances on the issues how can we come to agreement to solve our toughest environmental problems In response to this pressing need Integral Ecology unites valuable insights from multiple perspectives into a comprehensive theoretical framework one that can be put to use right now The framework is based on Integral Theory as well as Ken Wilber s AQAL model and is the result of over a decade of research exploring the myriad perspectives on ecology available to us today and their respective methodologies Dozens of real life applications and examples of this framework currently in use are examined including three in depth case studies work with marine fisheries in Hawai i strategies of eco activists to protect Canada s Great Bear Rainforest and a study of community development in El Salvador In addition eighteen personal practices of transformation are provided for you to increase your own integral ecological awareness Integral Ecology provides the most sophisticated application and extension of Integral Theory available today and as such it serves as a template for any truly integral effort Doing Good Better William MacAskill, 2016-08-02 An up and coming visionary in the world of philanthropy and a cofounder of the effective altruism movement explains why most of our ideas about how to make a difference are wrong and presents a counterintuitive way for each of us to do the most good possible While a researcher at Oxford William MacAskill decided to devote his study to a simple question How can we do good better MacAskill realized that while most of us want to make a difference we often decide how to do so based on assumptions and emotions rather than facts As a result our good intentions often lead to ineffective sometimes downright harmful outcomes As an antidote MacAskill and his colleagues developed effective altruism a practical data driven approach to doing good that allows us to make a tremendous difference regardless of our resources Effective altruists operate by asking certain key questions that force them to think differently set aside biases and use evidence and careful reasoning rather than act on impulse In Doing Good Better MacAskill lays out these principles and shows that when we use them correctly when we apply the head and the heart to each of our altruistic endeavors each of us has the power to do an astonishing amount of good **World Regional and Cultural Footprints and Environmental Sustainability** Ebenezer O. J.

Peterson,2019-01-08 Through theoretical discussions and case studies this volume explores how processes of contestation about knowledge norms and governance processes shape efforts to promote sustainability through international environmental governance The epistemic communities literature of the 1990s highlighted the importance of expert consensus on scientific knowledge for problem definition and solution specification in international environmental agreements This book addresses a gap in this literature insufficient attention to the multiple forms of contestation that also inform international environmental governance These forms include within discipline contestation that helps forge expert consensus inter disciplinary contestation regarding the types of expert knowledge needed for effective response to environmental problems normative and practical arguments about the proper roles of experts and laypersons and contestation over how to combine globally developed norms and scientific knowledge with locally prevalent norms and traditional knowledge in ways ensuring effective implementation of environmental policies This collection advances understanding of the conditions under which contestation facilitates or hinders the development of effective global environmental governance The contributors examine how attempts to incorporate more than one stream of expert knowledge and to include lay knowledge alongside it have played out in efforts to create and maintain multilateral agreements relating to environmental concerns It will interest scholars and graduate students of political science global governance international environmental politics and global policy making Policy analysts should also find it useful **The Oxford Handbook of**

Madhoo, 2010 Small island states have a big problem the environmental consequences of climate change This text introduces and explains the key environmental policy challenges and suggested responses to them *The Art and Craft of International Environmental Law* Daniel Bodansky, Harro van Asselt, 2024 In countless ways we are affected by international environmental norms some social others legal some quite general others very specific For example the norms limiting the refrigerants used in air conditioners have been agreed upon in legal form internationally and are mandated and enforced by national governments The sustainable fishery and forestry standards used by Carrefour and Ikea were developed more informally by environmental groups and businesses and are applied to producers through supply chain contracts without any government involvement The reluctance to eat tuna fish or own elephant ivory reflects more general social norms disseminated through education and culture How and why do these norms arise In what ways do they affect behavior Do they change what states and individuals actually do and if so why How effective are they in solving international environmental problems In the second edition of *The Art and Craft of International Environmental Law* Daniel Bodansky and Harro van Asselt explore these and other questions Revisions cover the numerous developments spanning the 13 years since the first edition was published New chapters address the growing role of environmental NGOs and the increasingly complex architecture of environmental law involving multiple institutions levels of governance and actors Recent research has been incorporated on treaty design and policy implementation and effectiveness and greater attention has been given to the role of the judiciary in standard

setting implementation and enforcement A sophisticated yet highly readable introduction to how international environmental law works and sometimes doesn't work this book is essential reading for a wide audience **Routledge Handbook of Global Environmental Politics** Paul G. Harris, 2013-10-15 This handbook provides a comprehensive and authoritative survey of Global Environmental Politics It brings together leading international academic experts and features 40 chapters that Describe the history of global environmental politics as a discipline and explain the various theories and perspectives used by scholars and students to understand it Examine the key actors and institutions in global environmental politics explaining the role of states international organizations regimes international law foreign policy institutions domestic politics corporations and transnational actors Address the ideas and themes shaping the practice and study of global environmental politics including sustainability consumption expertise uncertainty security diplomacy North South relations globalisation justice ethics participation and citizenship Assess the key issues and policies within global environmental politics including energy climate change ozone depletion air pollution acid rain sustainable transport persistent organic pollutants hazardous wastes water rivers wetlands oceans fisheries marine mammals biodiversity migratory species natural heritage forests desertification food and agriculture With an in depth new preface by the Editor this edition of the handbook is an invaluable resource for students scholars researchers and practitioners of environmental politics environmental studies environmental science geography international relations and political science **Research Handbook on International Environmental Law** Malgosia Fitzmaurice, David M. Ong, Panos Merkouris, 2010 an impressive volume and the editors have put together a high quality collection Research Handbook on International Environmental Law ought to be an invaluable reference source for both teachers and students of international environmental law in the years to come Web Journal of Current Legal Issues This wide ranging and comprehensive Handbook examines recent developments in international environmental law IEL and the crossover effects of this expansion on other areas of international law such as trade law and the law of the sea The expert contributors offer analyses of foundational issues in IEL such as responsibility for environmental damage sustainable development and the precautionary principle alongside studies in topical subject areas including marine protection and the law of international watercourses This Research Handbook offers an in depth analysis of IEL both as a field of law in its own right and as part of the wider system of international law It gives a comprehensive view of IEL in all its forms and complexity With thorough examination of specific environmental regimes and compliance mechanisms this Handbook will be an indispensable resource for legal scholars students and practitioners alike Climate Change as Political Catastrophe Ross Mittiga, 2024-01-24 There is now clear scientific consensus that without immediate and decisive action the world risks climate catastrophe This has fueled climate emergency declarations among activist groups and increasingly among local state and supranational governments But what exactly counts as a climate catastrophe and what does catastrophic climate change portend for contemporary societies This book argues that climate change is politically catastrophic insofar as it

threatens to undermine the material conditions that make justice and by extension stable democratic government possible It then uses the lens of catastrophe to bring into focus pressing questions concerning how to navigate trade offs between fairness and precautionary efficacy in the design of climate policy the permissibility of authoritarian climate emergency powers and the nature and role of climate disobedience Apart perhaps from the spectre of nuclear annihilation human civilization has never had to reckon with a threat so final and encompassing as that of climate catastrophe Much as some have argued that supreme necessity alters the contours of what is permissible in war this book starts from the premise that the credible threat of politically catastrophic climate change upends many of the most basic and widely shared assumptions in liberal and democratic thought
