P. Shil'nikov, 2001 Bifurcation and chaos has dominated research in nonlinear dynamics for over two decades and numerous introductory and advanced books have been published on this subject There remains however a dire need for a textbook which provides a pedagogically appealing yet rigorous mathematical bridge between these two disparate levels of exposition This book has been written to serve that unfulfilled need Following the footsteps of Poincaré and the renowned Andronov school of nonlinear oscillations this book focuses on the qualitative study of high dimensional nonlinear dynamical systems Many of the qualitative methods and tools presented in the book have been developed only recently and have not yet appeared in textbook form In keeping with the self contained nature of the book all the topics are developed with introductory background and complete mathematical rigor Generously illustrated and written at a high level of exposition this invaluable book will appeal to both the beginner and the advanced student of nonlinear dynamics interested in learning a rigorous mathematical foundation of this fascinating subject Sample Chapter s Introduction to Part II 124 KB Chapter 7 1 Rough systems on a plane Andronov Pontryagin theorem 218 KB Chapter 7 2 The set of center motions 158 KB Chapter 7 3 General classification of center motions 155 KB Chapter 7 4 Remarks on roughness of high order dynamical systems 136 KB Chapter 7 5 Morse Smale systems 435 KB Chapter 7 6 Some properties of Morse Smale systems 211 KB Contents Structurally Stable Systems Bifurcations of Dynamical Systems The Behavior of Dynamical Systems on Stability Boundaries of Equilibrium States The Behavior of Dynamical Systems on Stability Boundaries of Periodic Trajectories Local Bifurcations on the Route Over

 Critical Phenomena* Dimo I. Uzunov, 2010 This book provides a comprehensive introduction to the theory of phase transitions
 and critical phenomena The content covers a period of more than 100 years of theoretical research of condensed matter
 phases and phase transitions providing a clear interrelationship with experimental problems It starts from certain basic
 University knowledge of thermodynamics statistical physics and quantum mechanics The text is illustrated with classic
 examples of phase transitions Various types of phase transition and multi critical points are introduced and explained The
 classic aspects of the theory are naturally related with the modern developments This interrelationship and the field
 theoretical renormalization group method are presented in details The main applications of the renormalization group
 methods are presented Special attention is paid to the description of quantum phase transitions This edition contains a more
 detailed presentation of the renormalization group method and its applications to particular systems Variational,
