Math through the Ages: A Gentle History for Teachers and Others Expanded Second Edition William P. Berlinghoff, Fernando Q. Gouvêa, 2021-04-29 Where did math come from Who thought up all those algebra symbols and why What is the story behind negative numbers the metric system quadratic equations sine and cosine logs The 30 independent historical sketches in Math through the Ages answer these questions and many others in an informal easygoing style that is accessible to teachers students and anyone who is curious about the history of mathematical ideas Each sketch includes Questions and Projects to help you learn more about its topic and to see how the main ideas fit into the bigger picture of history The 30 short stories are preceded by a 58 page bird's eye overview of the entire panorama of mathematical history a whirlwind tour of the most important people events and trends that shaped the mathematics we know today What to Read Next and reading suggestions after each sketch provide starting points for readers who want to learn more This book is ideal for a broad spectrum of audiences including students in history of mathematics courses at the late high school or early college level pre service and in service teachers and anyone who just wants to know a little more about the origins of mathematics

Inventing the Mathematician Sara N. Hottinger, 2016-03-01 Considers how our ideas about mathematics shape our individual and cultural relationship to the field Where and how do we as a culture get our ideas about mathematics and about who can engage with mathematical knowledge Sara N Hottinger uses a cultural studies approach to address how our ideas about mathematics shape our individual and cultural relationship to the field She considers four locations in which representations of mathematics contribute to our cultural understanding of mathematics mathematics textbooks the history of mathematics portraits of mathematicians and the field of ethnomathematics Hottinger examines how these discourses shape mathematical subjectivity by limiting the way some groups including women and people of color are able to see themselves as practitioners of math *Inventing the Mathematician* provides a blueprint for how to engage in a deconstructive project revealing the limited and problematic nature of the normative construction of mathematical subjectivity

Stamping Through Astronomy Renato Dicati, 2013-06-18 Stamps and other postal documents are an attractive vehicle for presenting astronomy and its development Written with expertise and great enthusiasm this unique book offers a historical and philatelic survey of astronomy and some related topics on space exploration It contains more than 1300 color reproductions of stamps relating to the history of astronomy ranging from the earliest observations of the sky to modern research conducted with satellites and space probes Featured are the astronomers and astrophysicists who contributed to this marvelous story not only Ptolemy Copernicus Kepler Newton Herschel and

Einstein but also hundreds of other minor protagonists who played an important role in the development of this the most ancient yet the most modern of all the sciences The book also examines in depth the diverse areas which have contributed to the history of astronomy including the instrumentation the theories and the observations Many stamps illustrate the beauty and the mystery of celestial objects galaxies nebulae stars planets satellites comets and minor celestial bodies **High**

Performance and Optimum Design of Structures and Materials II S. Hernández,C.A. Brebbia,W.P. De Wilde,2016-11-28 Containing papers from the 2nd High Performance Design of Structures and Materials and the Optimum Design of Structures conference following the success of a number of meetings since 1989 this book will be of interest to those in any engineering field The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture Most high performance structures require the development of a generation of new higher performance sustainable materials which can more easily resist a range of external stimuli or react in a non conventional manner Emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling control and management Optimisation problems of interest involve those related to size shape and topology of structures and materials Optimisation techniques have much to offer to those involved in the design of new industrial products The development of new algorithms and the appearance of powerful commercial computer codes with easy to use graphical interfaces have created a fertile field for the incorporation of optimisation into the design process in all engineering disciplines The book addresses the topic of design optimisation with welcomed contributions on numerical methods different optimisation techniques and new software Several of the topics covered are Composite materials and structures Material characterisation Experiments and numerical analysis Transformable structures Environmentally friendly and sustainable structures Evolutionary methods in optimisation Aerospace structures Biomechanics application and Pneumatic structures **HISTORY AND PHILOSOPHY OF SCIENCE AND TECHNOLOGY**

A Field Guide to Algebra Antoine Chambert-Loir, 2007-12-21 This is a small book on algebra where the stress is laid on the structure of elds hence its title You will hear about equations both polynomial and differential and about the algebraic structure of their solutions For example it has been known for centuries how to explicitly solve polynomial equations of degree 2 Baby nians many centuries ago 3 Scipione del Ferro Tartaglia Cardan around th 1500a d and even 4 Cardan Ferrari xvi century using only algebraic operations and radicals nth roots However the case of degree 5 remained unsolved until Abel showed in 1826 that a general equation of degree 5 cannot be solved that way Soon after that Galois de ned the group of a polynomial equation as the group of permutations of its roots say complex roots that preserve all algebraic identities with rational coefficients satisfied by these roots Examples of such identities are given by the elementary symmetric polynomials for it is well known that the coefficients of a polynomial are up to sign elementary symmetric polynomials in the roots In general all relations are obtained by combining these but sometimes there are new ones and the group of the equation is smaller than the whole permutation group Galois understood how this symmetry group can be used to characterize the solvability of the equation He de ned the notion of solvable group and showed that if the group of the equation is solvable then one can express its roots with radicals and conversely
