The Computer And The Brain Perspectives On Human And Artificial Intelligence:

The Computer and the Brain J. R. Brink, C. R. Haden, Christopher Burawa, 1989 This collection of interdisciplinary analyses addresses the issue of the language of the brain The contributors include computer scientists neuroscientists psychologists linguists and historians The resulting collection reflects the state of knowledge more than a generation after John von Neumann entitled his tantalizing and provocative lectures The Computer and the Brain John von Neumann was one of the first to address the highly controversial issue of appropriate models to use in discussing cognitive science The issue he raised most pointedly and one that is still hotly debated is the language of the brain In his Silliman lectures he questioned the validity of using the computer as an interpretive model for human thought asserting that the language of the brain is not mathematical Later in the same lecture series however he attributes a statistical pattern to the brain This paradoxical stance of von Neumann's is representative of the rapidly shifting nature of cognitive science and of the study of the nature of language

Languages of the Mind Ray S. Jackendoff, 1995-09-25 Over the past two decades Ray Jackendoff has persistently tackled difficult issues in the theory of mind and related theories of cognitive processing Chief among his contributions is a formal theory that elaborates the nature of language and its relationship to a broad set of other domains Languages of the Mind provides convenient access to Jackendoff's work over the past five years on the nature of mental representations in a variety of cognitive domains in the context of a detailed theory of the level of conceptual structure developed in his earlier books Semantics and Cognition and Consciousness and the Computational Mind The first two chapters summarize the theory of levels of mental representation languages of the mind and their relationships to each other and show how conceptual structure can be approached along lines familiar from syntactic and phonological theory From this background subsequent chapters develop issues in word learning and its pertinence to the Piaget Chomsky debate and the relation of conceptual structure to the understanding of physical space Further chapters apply the theory to domains outside of traditional cognitive science They include an approach to social and cultural cognition modeled on first principles of linguistic theory the beginnings of a formal description of psychodynamic phenomena and a discussion of musical parsing and its relation to musical affect that bears on current disputes in linguistic parsing The final chapter takes up a long standing conflict between philosophical and psychological approaches to the study of mind arguing that mental representations should be regarded purely in terms of the combinatorial organization of brain states and that the philosophical insistence on the intentionality of mental states should be abandoned

Cybernetics And Systems Research '92 - Proceedings Of The 11th European Meeting On Cybernetics And Systems Research (In 2 Volumes) Robert Trappl, 1992-03-27 The 210 articles which are divided into 18 sections in this new reference work represent the most recent findings in cybernetics and systems research It brings together contributions from leading scientists from all over the world Europe North America South America Asia Africa and Australia This volume therefore gives a broad spectrum of the ongoing

research worldwide Topics covered in the 18 sections are General Systems Methodology Mathematical Systems Theory Computer Aided Process Interpretation Fuzzy Sets Approximate Reasoning and Knowledge based Systems Designing and Systems Biocybernetics and Mathematical Biology Cybernetics in Medicine Cybernetics of Socioeconomic Systems Systems Management and Organization Cybernetics of National Development Communication and Computers Connectionism and Cognitive Processing Intelligent Autonomous Systems Artificial Intelligence Impacts of Artificial Intelligence A Dynamic Systems Approach to the Development of Cognition and Action Esther Thelen, Linda B. Smith, 1994 A Dynamic Systems Approach to the Development of Cognition and Action presents a comprehensive and detailed theory of early human development based on the principles of dynamic systems theory Beginning with their own research in motor perceptual and cognitive development Thelen and Smith raise fundamental questions about prevailing assumptions in the field They propose a new theory of the development of cognition and action unifying recent advances in dynamic systems theory with current research in neuroscience and neural development In particular they show how by processes of exploration and selection multimodal experiences form the bases for self organizing perception action categories Thelen and Smith offer a radical alternative to current cognitive theory both in their emphasis on dynamic representation and in their focus on processes of change Among the first attempt to apply complexity theory to psychology they suggest reinterpretations of several classic issues in early cognitive development The book is divided into three sections The first discusses the nature of developmental processes in general terms the second covers dynamic principles in process and mechanism and the third looks at how a dynamic theory can be applied to enduring puzzles of development Cognitive Psychology series *Proceedings of the Fourteenth Annual Conference of the Cognitive Science Society* Cognitive Science Society (US) Conference, 2014-05-12 This volume features the complete text of all regular papers posters and summaries of symposia presented at the 14th annual meeting of the Cognitive Science Society **Hermeneutics and Science** International Society for Hermeneutics and Science, 1999-09-30 *Proceedings of the First Conference of the International Society for Hermeneutics and Science* National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1990 **Handbook of Cognition and Emotion** Tim Dalgleish, Mick Power, 2000-11-21 Edited by leading figures in the field this handbook gives an overview of the current status of cognition and emotion research by giving the historical background to the debate and the philosophical arguments before moving on to outline the general aspects of the various research traditions This handbook reflects the latest work being carried out by the key people in the field **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 **Psychology** Gregory A. Kimble, 1995-11-21 At a time in the history of psychology when many psychologists are troubled by the splintered condition of the field Gregory Kimble proposes that the diverse perspectives in psychology share ways of thinking that can bring coherence to the discipline Drawing on years of extensive research and scholarship including a deep familiarity with the writings of William James and many psychologists

who have succeeded him in a search for unity in psychological theorizing Kimble presents evidence for this potential unity He portrays psychology as a natural science with relevance to human life and offers a set of axioms that hold the field together Psychology is a two part exploration of the concept of psychology as the science of behavior The first part describes the traditional commitments of the scientific method and spells out the implications of those commitments for psychology The second part develops a general theory within a framework that can be called functional behaviorism which combines the imperative that a science of psychology must be about observable realities with the view that human behavior is the result of evolution Kimble s proposals are of general significance and have stood the test of time they were reasonably explicit in the writings of the giants in the history of psychology and they apply in contexts that range from behavioral neurology to social action A Bradford Book
