Wagman, Julia J. C.

Blau, 2019-07-31 This book provides a chapter by chapter update to and reflection on of the landmark volume by J J Gibson on the Ecological Approach to Visual Perception 1979 Gibson's book was presented a pioneering approach in experimental psychology it was his most complete and mature description of the ecological approach to visual perception Perception as Information Detection commemorates develops and updates each of the sixteen chapters from Gibson's volume The book brings together some of the foremost perceptual scientists in the field from the United States Europe and Asia to reflect on Gibson's original chapters expand on the key concepts discussed and relate this to their own cutting edge research This

connects Gibson's classic with the current state of the field as well as providing a new generation of students with a contemporary overview of the ecological approach to visual perception. Perception as Information Detection is an important resource for perceptual scientists as well as both undergraduates and graduates studying sensation and perception, vision, cognitive science, ecological psychology, and philosophy of mind.

**The Ecological Approach to Visual Perception** James Jerome Gibson, 1986

J. J. Gibson's Ecological Approach to Visual Perception Thomas Joseph Lombardo, 1973

*The Ecological Approach To Visual Perception* James J. Gibson, 2013-05-13

This is a book about how we see the environment around us: its surfaces, their layout, and their colors and textures; where we are in the environment, whether or not we are moving; and if we are, where we are going, what things are good for, how to do things, to thread a needle or drive an automobile, or why things look as they do. The basic assumption is that vision depends on the eye, which is connected to the brain. The author suggests that natural vision depends on the eyes in the head on a body supported by the ground, the brain being only the central organ of a complete visual system. When no constraints are put on the visual system, people look around, walk up to something interesting, and move around it so as to see it from all sides and go from one vista to another. That is natural vision, and what this book is about.

**Visual Perception** Vicki Bruce, Mark A. Georgeson, Patrick R. Green, 2014-08-27

This comprehensively updated and expanded revision of the successful second edition continues to provide detailed coverage of the ever-growing range of research topics in vision. In Part I, the treatment of visual physiology has been extensively revised with an updated account of retinal processing, a new section explaining the principles of spatial and temporal filtering which underlie discussions in later chapters, and an up-to-date account of the primate visual pathway. Part II contains four largely new chapters which cover recent psychophysical evidence and computational models of early vision: edge detection, perceptual grouping, depth perception, and motion perception. The models discussed are extensively integrated with physiological evidence. All other chapters in Parts II, III, and IV have also been thoroughly updated.

*The Reciprocity of Perceiver and Environment* Thomas J. Lombardo, 2017-03-27

Originally published in 1987, this title intended to historically reveal, through tracing Gibson's development, the substance of his views and how they bore upon general philosophical issues in theories of knowledge, and to investigate in detail the historical context of Gibson's theoretical position within psychology. Though the author has included a history of Gibson's perceptual research and experimentation, the focus is to explicate the dynamic, abstract form of Gibson's ecological approach. His emphasis is philosophical and theoretical, attempting to bring out the direction Gibson was moving in and how such changes could restructure the theoretical fabric of psychology. He devotes considerable attention to the Greeks, Medievalists, and the founders of the Scientific Revolution. This is because Gibson's theoretical challenge runs deep into the structure of western thought. The author's central goal was to set Gibson's ecological theory within the historical context of fundamental philosophical/scientific issues.

**Ecological Perception Research, Visual Communication, and Aesthetics** Klaus Landwehr, 2012-12-06

This book tries to apply James J. Gibson's ecological

approach to picture perception to questions of visual communication and aesthetics it provides examples from architecture industrial design and the arts to testify the feasibility of this application Additional theoretical analyses partly based on cross cultural and clinical research help supplement Gibson's basic conjecture that picture perception is essentially based on invariants of optical structure rather than interpretation

**Understanding Context** Andrew Hinton, 2014-12-02 To make sense of the world we're always trying to place things in context whether our environment is physical cultural or something else altogether Now that we live among digital always networked products apps and places context is more complicated than ever starting with where and who we are This practical insightful book provides a powerful toolset to help information architects UX professionals and web and app designers understand and solve the many challenges of contextual ambiguity in the products and services they create You'll discover not only how to design for a given context but also how design participates in making context Learn how people perceive context when touching and navigating digital environments See how labels relationships and rules work as building blocks for context Find out how to make better sense of cross channel multi device products or services Discover how language creates infrastructure in organizations software and the Internet of Things Learn models for figuring out the contextual angles of any user experience

**The Construction of Cognitive Maps** Juval Portugali, 1996-03-31 and processes which are exclusive to humans in their encoding storing decoding and retrieving spatial knowledge for various tasks The authors present and discuss connectionist models of cognitive maps which are based on local representation versus models which are based on distributed representation as well as connectionist models concerning language and spatial relations As is well known Gibson's 1979 ecological approach suggests a view on cognition which is diametrically different from the classical main stream view perception and thus cognition is direct immediate and needs no internal information processing and is thus essentially an external process of interaction between an organism and its external environment The chapter by Harry Heft introduces J J Gibson's ecological approach and its implication to the construction of cognitive maps in general and to the issue of wayfinding in particular According to Heft main stream cognitive sciences are essentially Cartesian in nature and have not as yet internalized the implications of Darwin's theory of evolution Gibson in his ecological approach has tried to do exactly this The author introduces the basic terminology of the ecological approach and relates its various notions in particular optic flow nested hierarchy and affordances to navigation and the way routes and places in the environment are learned

**How Direct is Visual Perception** Jerry A. Fodor, Zenon W. Pylyshyn, 198?

**Aviation Visual Perception** Randy Gibb, Rob Gray, Lauren Scharff, 2016-04-15 Vision is the dominant sense used by pilots and visual misperception has been identified as the primary contributing factor in numerous aviation mishaps resulting in hundreds of fatalities and major resource loss Despite physiological limitations for sensing and perceiving their aviation environment pilots can often make the required visual judgments with a high degree of accuracy and precision At the same time however visual illusions and misjudgments have been cited as the probable cause of

numerous aviation accidents and in spite of technological and instructional efforts to remedy some of the problems associated with visual perception in aviation mishaps of this type continue to occur Clearly understanding the role of visual perception in aviation is key to improving pilot performance and reducing aviation mishaps This book is the first dedicated to the role of visual perception in aviation and it provides a comprehensive single source document encompassing all aspects of aviation visual perception Thus this book includes the foundations of visual and vestibular sensation and perception how visual perceptual abilities are assessed in pilots the pilot s perspective of visual flying a summary of human factors research on the visual guidance of flying examples of specific visual and vestibular illusions and misperceptions mishap analyses from military commercial and general aviation and finally how this knowledge is being used to better understand visual perception in aviation s next generation Aviation Visual Perception Research Misperception and Mishaps is intended to be used for instruction in academia as a resource for human factors researchers design engineers and for instruction and training in the pilot community

*Local Applications of the Ecological Approach To Human-Machine Systems* Peter A. Hancock, John M. Flach, Jeff Caird, Kim J. Vicente, 2018-05-02 There is a growing consensus in the human factors ergonomics community that human factors research has had little impact on significant applied problems Some have suggested that the problem lies in the fact that much HF E research has been based on the wrong type of psychology an information processing view of psychology that is reductionistic and context free Ecological psychology offers a viable alternative presenting a richer view of human behavior that is holistic and contextualized The papers presented in these two volumes show the conceptual impact that ecological psychology can have on HF E as well as presenting a number of specific examples illustrating the ecological approach to human machine systems It is the first collection of papers that explicitly draws a connection between these two fields While work in this area is only just beginning the evidence available suggests that taking an ecological approach to human factors ergonomics helps bridge the existing gap between basic research and applied problems

Gaze and Visual Perception in Sport Gal Ziv, Ronnie Lidor, 2025-01-31 Gaze and Visual Perception in Sport is the first book that explores various aspects of gaze and visual perception in sport The way athletes control their gaze and their ability to extract relevant information from the environment is important for their ability to perform sport related motor tasks Whether it is closed self paced targeting tasks such as the basketball free throw shot or a more dynamic task such as overtaking a race car on track the visual system will play a large role in the athletes ability to achieve a high level of proficiency As eye tracking systems become available at reasonable prices the effect of gaze control and visual perception on sport related motor performance becomes more relevant in both research and professional contexts Focused on evidenced based theoretical and practical applications of gaze strategies related to expert performance in sport this cutting edge edited book brings together the multifaceted implementation of gaze behavior and visual attention in sport from both the empirical and applied perspectives This state of the art summary of the evidence based as well knowledge through to applied practice will be key reading for all elite

athletes as well as elite sport psychology consultants coaches and instructors

**Introduction to Ecological Psychology** Julia J. C. Blau, Jeffrey B. Wagman, 2022-07-29 Introduction to Ecological Psychology is a highly accessible book that offers an overview of the fundamental theoretical foundations of Ecological Psychology The authors Julia J C Blau and Jeffrey B Wagman provide a broad coverage of the topic including discussion of perception action as well as development cognition social interaction and application to real world problems Concepts are presented in the book using a conversational writing style and everyday examples that introduce novice readers to the problems of perception and action and demonstrate the application of the ecological approach theories to broader philosophical questions Blau and Wagman explain how ecological psychology might be pertinent to both classic and newer issues in psychology The authors move beyond the traditional scope of the discipline to effectively illustrate concepts of dynamics evolution self organization and physical intelligence in ecological psychology This book is an essential guide to the basics for students and professionals in ecological psychology sensation and perception cognition and development It is also indispensable reading for anyone interested in ecological and developmental studies

**Theories of Visual Perception** Ian E. Gordon, 2004-09-30 A clear critical account of the major approaches to understanding visual perception It explains why approaches to theories of visual perception differ so widely and places each theory into its historical and philosophical context

**Visual Perception** Nicholas J. Wade, Michael Swanston, 2013 Vision is our most dominant sense From the light that enters our eyes to the complex cognitive processes that follow we derive most of our information about what things are where they are and how they move from our vision

**Visual Perception** Nicholas Wade, Mike Swanston, 2013-03-05 Does the world appear the same to everyone Does what we know determine what we see Why do we see the world as we do Vision is our most dominant sense From the light that enters our eyes to the complex cognitive processes that follow we derive most of our information about what things are where they are and how they move from our vision Visual Perception takes a refreshingly different approach to this enigmatic sense From the function that vision serves for an active observer to the history of visual perception itself the third edition has been extensively revised updated and expanded while still preserving the essential features of historical context neurophysiology and independent thought that made the earlier editions so engaging Covering the perception of location motion object recognition and with up to date information on the workings of the visual brain the 3rd edition looks at how our ideas have been shaped not just by psychology but by art optics biology and philosophy The emphasis on understanding vision as a basis for action in the real world has also been expanded to cover seeing representations of all sorts whether they are pictures or computer generated displays The 3rd Edition of Visual Perception is a readable accessible and truly relevant introduction to the world of perception and will be welcomed by students of visual perception as well as anyone with a general interest in the mysteries and wonder of vision
