The Ecosystem Concept In Anthropology:

The Ecosystem Approach in Anthropology Emilio F. Moran, 1990 A reassessment of the ecosystem concept for anthropology *The Ecosystem Concept In Anthropology* Emilio F Moran, Susan H Lees, 2019-09-06 Critics of the ecosystem concept have noted the tendency of ecosystem based studies to overemphasize energy flow to rely on functionalist assumptions to neglect historical and evolutionary factors and to overlook the role of individuals as the locus of natural selection and decision making In this volume leading figures in the study of biological and human ecology evaluate these criticisms and propose ways to advance the state of knowledge in ecological research *The Ecosystem Concept in Anthropology* EMILIO F. LEES MORAN (SUSAN H.), 2022-06-30 This book uses leading figures in the study of biological and human ecology to evaluate the criticisms and propose ways to advance the state of knowledge in ecological research It examines the loss of explanatory value when the ecosystem concept in anthropology is applied to human systems *The ecological transition* John William Bennett, *The Earth as Transformed by Human Action* B. L. Turner, William C. Clark, Robert W. Kates, John F. Richards, Jessica T. Mathews, William B. Meyer, 1993-01-29 The Earth as Transformed by Human Action is the culmination of a mammoth undertaking involving the examination of the toll our continual strides forward technical and social take on our world The purpose of such a study is to document the changes in the biosphere that have taken place over the last 300 years to contrast global patterns of change to those appearing on a regional level and to explain the major human forces that have driven these changes The first section deals strictly with the major human forces of the past 300 years and the second is a detailed account of the transformations of the global environment wrought by human action The final section examines a range of perspectives and theories that purport to explain human actions with regard to the biosphere **Integrating Social Sciences with Ecosystem Management** H. Ken Cordell, John Clark Bergstrom, 1999 In this book several leading scientists representing a variety of key social sciences describing their discipline and provide guidance for applying the knowledge and method of that science As contributors to this book these scientists were asked to describe the subject matter of their disciplines and the kind of questions they typically address in their research They provide lists of selected references for the reader who wants more information than can be provided in their short book chapters A wide variety of theories concepts measures data collection methods and spatial analysis approaches resides within each to the social science disciplines and authors cover These include for example sociology cultural anthropology resource economics and social psychology **Cattle Bring Us to Our Enemies** J. Terrence McCabe, 2010-02-11 An in depth look at the ecology history and politics of land use among the Turkana pastoral people in Northern Kenya Based on sixteen years of fieldwork among the pastoral Turkana people McCabe examines how individuals use the land and make decisions about mobility livestock and the use of natural resources in an environment characterized by aridity unpredictability insecurity and violence The Turkana are one of the world's most mobile peoples but understanding why and how they move is a complex

task influenced by politics violence historical relations among ethnic groups and the government as well as by the arid land they call home As one of the original members of the South Turkana Ecosystem Project McCabe draws on a wealth of ecological data in his analysis His long standing relationship with four Turkana families personalize his insights and conclusions inviting readers into the lives of these individuals their families and the way they cope with their environment and political events in daily life J Terrence McCabe is Associate Professor of Anthropology University of Colorado at Boulder

Arctic Adaptations Igor Krupnik, 2014-05-20 The common view of indigenous Arctic cultures even among scholarly observers has long been one of communities continually in ecological harmony with their natural environment In Arctic Adaptations Igor Krupnik dismisses the textbook notion of traditional societies as static Using information from years of field research interviews with native Siberians and archaeological site visits Krupnik demonstrates that these societies are characterized not by stability but by dynamism and significant evolutionary breaks Their apparent state of ecological harmony is in fact a conscious survival strategy resulting from a prolonged and therefore successful process of human adaptation in one of the most extreme inhabited environments in the world As their physical and cultural environment has changed fluctuating reindeer and caribou herds unpredictable weather patterns introduction of firearms and better seacraft Arctic communities have adapted by developing distinctive subsistence practices social structures and ethics regarding utilization of natural resources Krupnik's pioneering work represents a dynamic marriage of ethnography and ecology and makes accessible to Western scholars crucial findings and archival data previously unavailable because of political and language barriers

The Social Embeddedness of Industrial Ecology Frank Boons, Jennifer A. Howard-Grenville, 2009-01-01 From its inception the field of industrial ecology has taken a distinctly technological approach to understanding and improving ecological consequences of industrial activities Increasingly however scholars and practitioners are developing perspectives on the social embeddedness of industrial ecology the ways in which material and energy flows in regions and product chains are shaped by the social context in which they occur This book presents empirical work addressing how cognitive cultural political and structural mechanisms condition the emergence and operation of industrial ecology Further exploring such mechanisms holds promise for understanding both the barriers to and opportunities for altering the ecological impacts of industrial practice Through contemplative chapters and intermezzos authors with different disciplinary backgrounds reflect on the contribution of work from various social sciences to industrial ecology Unique to the volume the authors of the commentaries bring in their personal and professional experiences reflecting on how they have engaged in or have seen the value in cross disciplinary work They also include discussion explicitly on the dialogue and its value to the evolution of the field In these ways the book

develops the dialogue between social science contributors and researchers from other disciplines within the field of industrial ecology Scholars and students involved in the study of industrial ecology and related fields as well as practising managers and those involved in facilitating industrial ecology projects around the world will find this engaging and comprehensive volume indispensable Kpim of Environment Fr. Robins, Barbara J. Fraser, 2020-07-01 The natural wealth of the Amazon and Andes has long attracted fortune seekers from explorers farmers and gold panners to multimillion dollar mining oil and gas and timber operations Modern demands for commodities have given rise to new development schemes including hydroelectric dams open cast mines and industrial agricultural operations The history of human habitation in this region is intimately tied to its rich biodiversity and the Amazon basin is home to scores of indigenous groups many of whom have populations so small that their cultural and physical survival is endangered *Landscapes of Inequity* explores the debate over rights to and use of resources and addresses fundamental questions that inform the debate in the western Amazon basin from the Andes Mountains to the tropical lowlands Beginning with an examination of the divergent conceptual interpretations of environmental justice the volume explores the issue from two interlocking perspectives of indigenous peoples and of economic development in a global economy The volume concludes by examining the efficacy of laws and policies concerning the environment in the region the viability and range of judicial recourse and future directions in the field of environmental justice *Landscape, Process and*

Power Serena Heckler, 2009 Argues that to accurately and appropriately describe TEK the historical and political forces that have shaped it as well as people's day to day engagement with the landscape around them must be taken into account

The Silent COUNTDOWN Peter Brimblecombe, Christian Pfister, 2012-12-06 There is a growing need for cooperation between disciplines not only to deal with the burning problems of the present but to study the interaction of societies and their ecosystems in the past In the 1970s studies in Environmental History were largely confined to North America Recent years have brought about a vast increase in the amount the quality and the scope of scholarship on historical interactions between human social and economic development and the biosphere in Europe both East and West This broad interest in environmental history may have been heightened and sharpened by the dangers of unbridled technology and unlimited growth which are becoming more and more manifest However for several reasons it is still difficult to become familiar with the different approaches to this new and interdisciplinary of study Many fields of thought biology anthropology field geography sociology and history are involved the relevant books and articles are hard to find and a coherent theoretical framework is still lacking because the key issues have yet to be submitted to a thorough scholarly debate It is hoped that the present volume will make a contribution towards overcoming those shortcomings **Interpreting Nature** I. G.

Simmons, 2013-01-11 Human society has constructed many varied notions of the environment Scientific information about the environment is often seen as the only worthwhile knowledge This ignores the complexities created by interaction between people and the environment Idealist thinking argues that everything we know is based on a construct of our minds and that all is possible Can both be correct and true *Interpreting Nature* explores the position of humanity in the environment from the principle that the models we construct are imperfect and can only be provisional Having examined the way in which the natural sciences have interrogated nature the types of data produced and what they mean to us this looks at the environment within philosophy and ethics the social sciences and the arts and analyses their role in the formation of environmental cognition *Natural Resources And People* Kenneth A. Dahlberg, 2019-03-08 In this book the authors

provides an up to date assessment of research on human interactions with natural resource systems They pay attention to the interaction between theory and practice by including case studies and detailed examples involving specific natural resource systems *Human Organizations and Social Theory* Murray J. Leaf, 2010-10-01 In the 1930s George Herbert Mead and

other leading social scientists established the modern empirical analysis of social interaction and communication enabling theories of cognitive development language acquisition interaction government law and legal processes and the social construction of the self However they could not provide a comparably empirical analysis of human organization The theory in this book fills in the missing analysis of organizations and specifies more precisely the pragmatic analysis of communication with an adaptation of information theory to ordinary unmediated communications The study also provides the theoretical basis for understanding the success of pragmatically grounded public policies from the New Deal through the postwar

reconstruction of Europe and Japan to the ongoing development of the European Union in contrast to the persistent failure of positivistic and Marxist policies and programs

Anthropological Conversations Caroline B. Brettell, 2014-10-23 Cultural anthropologists can be an intellectually adventurous crowd open even eager to building bridges across disciplines in the name of understanding human behavior and the human experience more broadly In this first of its kind book Caroline Brettell explores the cross disciplinary conversations that have engaged cultural anthropologists both past and present Brettell highlights a handful of conversations between the discipline of anthropology on the one hand and history geography literature biology psychology and demography on the other She also pinpoints how these exchanges address three enduring issues of anthropological concern the temporal and the spatial dimensions of human experience the scientific and the humanistic dimensions of the anthropological enterprise and the individual and the group population as units of analysis in research Anthropological Conversations offers detailed accounts of particular ethnographic methodologies and findings and the theoretical trends informing them as a means of grasping the big picture issues Brettell clearly shows that by engaging with other fields cultural anthropologists have been able to think more deeply about what they mean by culture through this book she invites readers to continue the conversation
