The Elements of Non-Euclidean Geometry, by D. M. Y. Sommerville Duncan M'Laren Young Sommerville, 2004-01-01

Elements of Non-Euclidean Geometry ... Duncan M'Laren Young Sommerville, 1919 *The Elements of Non-euclidean Geometry* D. M. Y. Sommerville, 1958 *The Elements of Non-Euclidean Geometry* D. M. Y. Sommerville, 2012-05-24

Renowned for its lucid yet meticulous exposition this classic allows students to follow the development of non Euclidean geometry from a fundamental analysis of the concept of parallelism to more advanced topics 1914 edition Includes 133 figures **The Elements of Non-euclidean Geometry** D. M. Y. Sommerville, 1958 **Elementary Geometry in**

Hyperbolic Space Werner Fenchel, 2011-04-20 The series is devoted to the publication of monographs and high level textbooks in mathematics mathematical methods and their applications Apart from covering important areas of current interest a major aim is to make topics of an interdisciplinary nature accessible to the non specialist The works in this series are addressed to advanced students and researchers in mathematics and theoretical physics In addition it can serve as a guide for lectures and seminars on a graduate level The series de Gruyter Studies in Mathematics was founded ca 30 years ago by the late Professor Heinz Bauer and Professor Peter Gabriel with the aim to establish a series of monographs and textbooks of high standard written by scholars with an international reputation presenting current fields of research in pure and applied mathematics While the editorial board of the Studies has changed with the years the aspirations of the Studies are unchanged In times of rapid growth of mathematical knowledge carefully written monographs and textbooks written by experts are needed more than ever not least to pave the way for the next generation of mathematicians In this sense the editorial board and the publisher of the Studies are devoted to continue the Studies as a service to the mathematical community Please submit any book proposals to Niels Jacob **Elements of Non-euclidean Geometry** Sommerville D. M. Y., 1901 **A New Perspective on Relativity** Bernard H. Lavenda, 2012 Starting off from noneuclidean geometries apart from the method of Einstein s equations this book derives and describes the phenomena of gravitation and diffraction A historical account is presented exposing the missing link in Einstein s construction of the theory of general relativity the uniformly rotating disc together with his failure to realize that the Beltrami metric of hyperbolic geometry with constant curvature describes exactly the uniform acceleration observed This book also explores these questions How does time bend Why should gravity propagate at the speed of light How does the expansion function of the universe relate to the absolute constant of the noneuclidean geometries Why was the Sagnac effect ignored Can Maxwell s equations accommodate mass Is there an inertia due solely to polarization Can objects expand in elliptic geometry like they contract in hyperbolic geometry

Philosophical Problems of Space and Time Adolf Grünbaum, 2012-12-06 It is ten years since Adolf Grünbaum published the first edition of this book It was promptly recognized to be one of the few major works in the philosophy of the natural sciences of this generation In part this is so because Grünbaum has chosen a problem basic both to philosophy and to the

natural sciences the nature of space and time and in part this is so because he so admirably exemplifies that Aristotelian devotion to the intimate and mutual dependence of actual science and philosophical understanding More than this however the quality of his work derives from his achievement in combining detail with scope The problems of space and time have been among the most difficult in contemporary and classical thought and Grünbaum has been responsible to the full depth and complexity of these difficulties This revised and enlarged second edition is a work in progress in the tradition of reflective analysis of modern science of such figures as Ehrenfest and Reichenbach In publishing this work among the Boston Studies in the Philosophy of Science we hope to contribute to and encourage that broad tradition of natural philosophy which is marked by the close collaboration of philosophers and scientists To this end we have published the proceedings of our Colloquia of meetings and conferences here and abroad as well as the works of single authors

Principles of Geometry: Plane geometry: conics, circles, non-Euclidean geometry Henry Frederick Baker, 1922 **Spherical Geometry and Its Applications** Marshall Whittlesey, 2019-11-14 Spherical Geometry and Its Applications introduces spherical geometry and its practical applications in a mathematically rigorous form The text can serve as a course in spherical geometry for mathematics majors Readers from various academic backgrounds can comprehend various approaches to the subject The book introduces an axiomatic system for spherical geometry and uses it to prove the main theorems of the subject It also provides an alternate approach using quaternions The author illustrates how a traditional axiomatic system for plane geometry can be modified to produce a different geometric world but a geometric world that is no less real than the geometric world of the plane Features A well rounded introduction to spherical geometry Provides several proofs of some theorems to appeal to larger audiences Presents principal applications the study of the surface of the earth the study of stars and planets in the sky the study of three and four dimensional polyhedra mappings of the sphere and crystallography Many problems are based on propositions from the ancient text Sphaerica of Menelaus **Analytical Geometry of Conic Sections and Elementary Solid Figures** A. Barrie Grieve, 1925 *Bulletin of the American Mathematical Society* American Mathematical Society, 1915 *Bulletin (new Series) of the American Mathematical Society*, 1915 *The Beauty of Geometry* H. S. M. Coxeter, Harold Scott Macdonald Coxeter, 1999-01-01 Absorbing essays demonstrate the charms of mathematics Stimulating and thought provoking treatment of geometry's crucial role in a wide range of mathematical applications for students and mathematicians **The National Union Catalog, Pre-1956 Imprints**, 1968 **The Fifth Postulate** Jason Socrates Bardi, 2008-12-01 The great discovery that no one wanted to make It's the dawn of the Industrial Revolution and Euclidean geometry has been profoundly influential for centuries One mystery remains however Euclid's fifth postulate has eluded for two thousand years all attempts to prove it What happens when three nineteenth century mathematicians realize that there is no way to prove the fifth postulate and that it ought to be discarded along with everything they'd come to know about geometry Jason Socrates Bardi shares the dramatic story of the moment when the

tangible and easily understood world we live in gave way to the strange mind blowing world of relativity curved space time and more Jason Socrates Bardi tells the story of the discovery of non Euclidian geometry one of the greatest intellectual advances of all time with tremendous clarity and verve I loved this book John Horgan author The End of Science and Rational Mysticism An accessible and engrossing blend of micro biography history and mathematics woven together to reveal a blockbuster discovery David Wolman author of Righting the Mother Tongue and A Left Hand Turn around the World The Thermodynamics of Electrical Phenomena in Metals, and A Condensed Collection of Thermodynamic Formulas Percy Williams Bridgman,1961 **An Investigation of the Laws of Thought** George Boole,1854 **Geometry, Topology and Dynamics of Character Varieties** William Goldman,2012 This book aims to describe for readers uneducated in science the development of humanity s desire to know and understand the world around us through the various stages of its development to the present when science is almost universally recognized at least in the Western world as the most reliable way of knowing The book describes the history of the large scale exploration of the surface of the earth by sea beginning with the Vikings and the Chinese and of the unknown interiors of the American and African continents by foot and horseback After the invention of the telescope visual exploration of the surfaces of the Moon and Mars were made possible and finally a visit to the Moon The book then turns to our legacy from the ancient Greeks of wanting to understand rather than just know and why the scientific way of understanding is valued For concreteness it relates the lives and accomplishments of six great scientists four from the nineteenth century and two from the twentieth Finally the book explains how chemistry came to be seen as the most basic of the sciences and then how physics became the most fundamental
