Ronse De Craene, 2011-09-22 Genetic and molecular studies have recently come to dominate botanical research at the expense of more traditional morphological approaches This broad introduction to modern flower systematics demonstrates the great potential that floral morphology has to complement molecular data in phylogenetic and evolutionary investigations Contributions from experts in floral morphology and evolution take the reader through examples of how flowers have diversified in a large variety of lineages of extant and fossil flowering plants They explore angiosperm origins and the early evolution of flowers and analyse the significance of morphological characters for phylogenetic reconstructions on the tree of life The importance of integrating morphology into modern botanical research is highlighted through case studies exploring specific plant groups where morphological investigations are having a major impact Examples include the clarification of phylogenetic relationships and understanding the significance and evolution of specific floral characters such as pollination mechanisms and stamen and carpel numbers      *Plants of the World* Maarten J. *Diversity and Classification of Flowering Plants* Armen Leonovich Takhtadzhian,1997 The culmination of more than fifty years of research by the foremost living expert on plant classification *Diversity and Classification of Flowering Plants* is an important contribution to the field of plant taxonomy In the last decade the system of classifying plants has been thoroughly revised Instead of describing every individual family Takhtajan includes descriptions in keys to families which he calls descriptive keys The advantage of descriptive keys is that they give both the characteristic features of the families and their differences The delimitation of families and orders drastically differs from the one accepted by the Englerian school and from the one accepted in Arthur Cronquist s system Takhtajan favors the smaller more natural families and orders which are more coherent and better defined where characters are easily grasped and which are more suitable for information retrieval and phylogenetic studies including cladistic analysis because it reduces polymorphic codings Annual Report of Institute of Botany, Academia Sinica Chung yang yen chiu yüan.
