The Echo Vector:

The Echo Vector James Kahn, 1987 **Proceedings of the IRE.** ,1929 **Proceedings of the Institute of Radio Engineers** Institute of Radio Engineers, 1929 **Advances in Digital Speech Transmission** Prof Rainer Martin, Prof Ulrich Heute, Prof Christiane Antweiler, 2008-02-28

Speech processing and speech transmission technology are expanding fields of active research. New challenges arise from the anywhere anytime paradigm of mobile communications, the ubiquitous use of voice communication systems in noisy environments, and the convergence of communication networks toward Internet based transmission protocols such as Voice over IP. As a consequence, new speech coding, new enhancement and error concealment, and new quality assessment methods are emerging. *Advances in Digital Speech Transmission* provides an up to date overview of the field, including topics such as speech coding in heterogeneous communication networks, wideband coding, and the quality assessment of wideband speech. It provides an insight into the latest developments in speech processing and speech transmission, making it an essential reference to those working in these fields. It offers a balanced overview of technology and applications. It discusses topics such as speech coding in heterogeneous communications networks, wideband coding, and the quality assessment of the wideband speech. It explains speech signal processing in hearing instruments and man machine interfaces from an applications point of view. It covers speech coding for Voice over IP, blind source separation, digital hearing aids, and speech processing for automatic speech recognition. *Advances in Digital Speech Transmission* serves as an essential link between the basics and the type of technology and applications prospective engineers work on in industry labs and academia. The book will also be of interest to advanced students, researchers, and other professionals who need to brush up their knowledge in this field.

Depolarizing Collisions in Nonlinear Electrodynamics Igor V. Yevseyev, Valery M. Yermachenko, Vitaly V. Samartsev, 2019-07-17

In this book, the authors derive the theory of elastic depolarizing collisions and describe their importance in some nonlinear electromagnetic phenomena in gaseous media. The formation of photon echo and a description of its various types in gaseous media are then presented. The authors show that the characteristics of the corresponding signals depend essentially on elastic depolarizing collisions. They also consider the advantages of a new kind of photon echo spectroscopy: polarization photon echo spectroscopy. A high level specialized

treatment Depolarizing Collisions in Nonlinear Electrodynamics will appeal to researchers and advanced graduates in nonlinear optics and quantum electronics
