The Real Environmental Crisis Jack Hollander, 2003-04-02 Drawing a completely new road map toward a sustainable future Jack M Hollander contends that our most critical environmental problem is global poverty His balanced authoritative and lucid book challenges widely held beliefs that economic development and affluence pose a major threat to the world's environment and resources Pointing to the great strides that have been made toward improving and protecting the environment in the affluent democracies Hollander makes the case that the essential prerequisite for sustainability is a global transition from poverty to affluence coupled with a transition to freedom and democracy The Real Environmental Crisis takes a close look at the major environment and resource issues population growth climate change agriculture and food supply our fisheries forests and fossil fuels water and air quality and solar and nuclear power In each case Hollander finds compelling evidence that economic development and technological advances can relieve such problems as food shortages deforestation air pollution and land degradation and provide clean water adequate energy supplies and improved public health The book also tackles issues such as global warming genetically modified foods automobile and transportation technologies and the highly significant Endangered Species Act which Hollander asserts never would have been legislated in a poor country whose citizens struggle just to survive Hollander asks us to look beyond the media's doomsday rhetoric about the state of the environment for much of it is simply not true and to commit much more of our resources where they will do the most good to lifting the world's population out of poverty

Beyond Paradise Jack Clayton Swearingen, 2007-03-01 Technology is shaping our culture and controlling our lives for better or for worse Often technology's benefits far outweigh its negative impacts and technological advances can seem boundless But the scientific technological worldview tends to override other value systems Indeed this technological way of thinking has influenced many contemporary ideas beliefs values habits and ways of communicating Furthermore in addition to technology's well known environmental impacts social aesthetic and spiritual consequences are now emerging How can we balance positive physical effects of technology with other ambiguous or negative impacts Some of the decisions we face have no

precedent from which to draw wisdom For this reason the resources of Scripture and the Christian tradition must be brought to bear on technological questions How is technology used and abused today Does technological progress lead to human progress How can Scripture help us both individually and collectively to manage technology s impact in proactive ways Swearengen uncovers a comprehensive scriptural mandate for managing technology On his way to a theology of technology he evaluates which advances are moving society in directions consistent with God s purposes Beyond Paradise Technology and the Kingdom of God aims to provide practical means for assessing technology s influence and for steering technology and its effects toward biblical ends Energy and Environmental Security in Developing Countries Muhammad Asif,2021-03-02

Sustainable Policies and Practices in Energy, Environment and Health Research Walter Leal Filho,Diogo Guedes Vidal,Maria Alzira Pimenta Dinis,Ricardo Cunha Dias,2021-12-15 This book aims to give a contribution to a more comprehensive and interdisciplinary understanding of the cross cutting issues on energy environment and health research topics in the current world scenario where nations all over the world are struggling to accomplish the United Nations Sustainable Development Goals and to ensure sustainable patterns for all This interdisciplinary implies a commitment between all fields of science working together to provide knowledge that could result in the promotion of quality of life At the present it is evident that not all people benefit from sustainable policies and practices and the communication between health energy environmental and social problems is undeniable A call for different views could be a pathway attracting universities stakeholders organizations and civil society to deeply discuss how one solution does not fit all societies Few publications are coherently handling this matter This book is expected to fill this gap and to develop an interest in a larger audience working in general sustainable development and cross cutting issues This book is produced by the European School of Sustainability Science and Research ESSSR It gives special emphasis to state of the art descriptions of approaches methods initiatives and projects from universities stakeholders organizations and civil society across the world regarding cross cutting issues in energy environment and health research Health and Energy Platform of Action report 2020-2022: building connections for better health World Health Organization,2024-01-29 Energy is linked to many of the sustainable development priorities including public health gender equality food security clean water education economic growth youth and women s empowerment and climate action The absence of clean and sustainable energy has a significant adverse impact on the health and livelihoods of the poorest populations Around 2 3 billion people mostly in low and middle income countries LMICs still mainly rely on inefficient and polluting fuels and stoves for daily cooking exposing them to health damaging emissions that result in millions of premature deaths each year Health and livelihood risks are greatest for women and children as they are often tasked with cooking and gathering fuel The traditional use of biomass for cooking also puts the environment and climate at risk by contributing to deforestation and greenhouse gas emissions Around 1 billion people worldwide mostly in poor and rural communities are estimated to be served by health care facilities without any electricity or reliable power supply and only one in two hospitals in sub Saharan Africa has a reliable electricity supply Without adequate and reliable power essential medical devices cannot function basic amenities remain out

of reach and delivery of health care services is of substandard quality Unless rapid action is taken the world will not meet its targets under the 2030 Agenda for Sustainable Development and the Paris Agreement In November 2018 during the first World Health Organization WHO Global Conference on Air Pollution and Health Dr Tedros Adhanom Ghebreyesus Director General of WHO announced his vision to build a Health and Energy Platform of Action HEPA to enhance multisectoral collaboration between the health and energy sectors and mobilize the political and financial commitments needed to achieve Sustainable Development Goals SDGs 3 and 7 In response WHO the United Nations Department of Economic and Social Affairs UN DESA the United Nations Development Programme UNDP and the World Bank in cooperation with the International Renewable Energy Agency IRENA and other key stakeholders launched HEPA in May 2019 with an initial focus on improving health through promoting clean fuels and technologies for cooking and accelerating access to electricity for health care facilities Following this announcement in July 2020 HEPA members worked together to develop a strategic workplan with five overarching objectives to strengthen the cooperation between the health and energy sectors and elevate energy access as a key development priority area for public health gender equity climate and sustainable development more broadly see Box 1 HEPA has gained significant momentum since its establishment in 2019 By October 2022 the platform had over 20 member organizations All members are committed to working together and synergizing efforts on the ground to accelerate universal electrification of health care facilities and clean cooking This HEPA action report summarizes the key activities and results achieved and highlights activities under each of HEPA's five objectives

Prospects for Sustainable Energy Edward S. Cassedy, 2000-04-06 Fossil fuels are a finite resource and their continued use as the world's dominant energy supply is damaging the environment Future use of alternative methods of energy supply is inescapable and this book explores the historical origins technical features marketability and environmental impacts of the complete range of sustainable energy technologies solar biomass wind hydropower geothermal power ocean energy sources solar derived hydrogen fuel and energy storage The aim is to inform policy analysts and decision makers of the options available for sustainable energy production The book is therefore written so as to be accessible to an audience from a broad range of backgrounds and scientific training It will also be a valuable supplementary text for advanced courses in environmental studies energy economics and policy and engineering

Critical Connections Lee Riedinger, Allen Ekkebus, William Bugg, D Ray Smith, 2024

This is a history of the long association of the University of Tennessee with Oak Ridge National Laboratory dating back to the Manhattan Project. While large scale partnerships between scientific laboratories and academic institutions are now common in the aftermath of World War II, it was not clear what role this huge research and development program would play in postwar America, but pioneering professors and administrators were determined that one option, dismantling the whole thing, would not happen. Thus began a now eight decade long association that has flowered into one of the world's largest collaborations between a federal agency and a research university.

Agile Energy Systems Woodrow W. Clark II, 2017-07-22

Agile Energy Systems: Global Distributed On Site and Central Grid Power Second Edition offers new solutions to the structure of electricity provision made possible by new energy technologies. The book begins by showing how five precipitating forces led to the deregulation debacle in California, including major technological changes and commercialization, regulatory needs mismatched to societal adjustments, inadequate and flawed economic models, a lack of vision, goals, and planning that lead to energy failures and questionable finance, and lack of economic development. The second half of the book examines the civic market paradigm for new economic models and how to plan for complexity using California as an example of how the problem of centralized power systems can be seen in the worst drought that California has ever seen. Offers new approaches to energy systems, providing the tools and plans to achieve these objectives. Presents specific and actionable public policy and program tools. Illustrates how lessons learned from California can be used to create an agile energy system for any country.
