Evolution of Networks S. N. Dorogovtsev, J.F.F. Mendes, 2013-11 We live in a world of networks where everything is amazingly close to everything else The notion of network turns out to be central to our times the Internet and WWW are changing our lives our physical existence is based on various biological networks we are involved in all enveloping networks of economic and social relations Only in the 1990s did physicists begin to explore real networks both natural and artificial as evolving systems with intriguingly complex and effective architectures Progress has been so immediate and astounding that we actually face a new science based on a new set of concepts and one may even say on a new philosophy the natural philosophy of a small world Old ideas from

mathematics statistical physics biology computer science and so on take on quite new forms in applications to real evolving networks What is common to all networks What are the general principles of the organization and evolution of networks How do the laws of nature work in communication biological and social networks What are networks This book written by physicists answers these questions and presents a general insight into the world of networks Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1954 United States. Complex Artificial Environments Juval Portugali,2006-01-19 Juval Portugali The notion of complex artificial environments CAE refers to theories of complexity and self organization as well as to artifacts in general and to artificial environments such as cities in particular The link between the two however is not trivial For one thing the theories of complexity and self organization originated in the hard science and by reference to natural phenomena in physics and biology The study of artifacts per contra has traditionally been the business of the soft disciplines in the humanities and social sciences The notion of complex artificial environments thus implies the supposition that the theories of complexity and self organization together with the mathematical formalisms and methodologies developed for their study apply beyond the domain of nature Such a position raises a whole set of questions relating to the nature of 21 century cities and urbanism to philosophical issues regarding the natural versus the artificial to the methodological legitimacy of interdisciplinary transfer of theories and methodologies and to the implications that entail the use of sophisticated state of the art artifacts such as virtual reality VR cities and environments The three day workshop on the study of complex artificial environments that took place on the island of San Servolo Venice during April 13 2004 was a gathering of scholars engaged in the study of the various aspects of CAE
