Africa's Infrastructure World Bank,2009-12-01 Sustainable infrastructure development is vital for Africa's prosperity And now is the time to begin the transformation This volume is the culmination of an unprecedented effort to document analyze and interpret the full extent of the challenge in developing Sub Saharan Africa's infrastructure sectors As a result it represents the most comprehensive reference currently available on infrastructure in the region The book covers the five main economic infrastructure sectors information and communication technology irrigation power transport and water and sanitation Africa's Infrastructure A Time for Transformation reflects the collaboration of a wide array of African regional institutions and development partners under the auspices of the Infrastructure Consortium for Africa It presents the findings of the Africa Infrastructure Country Diagnostic AICD a project launched following a commitment in 2005 by the international community after the G8 summit at Gleneagles Scotland to scale up financial support for infrastructure development in Africa The lack of

reliable information in this area made it difficult to evaluate the success of past interventions prioritize current allocations and provide benchmarks for measuring future progress hence the need for the AICD Africa s infrastructure sectors lag well behind those of the rest of the world and the gap is widening Some of the main policy relevant findings highlighted in the book include the following infrastructure in the region is exceptionally expensive with tariffs being many times higher than those found elsewhere Inadequate and expensive infrastructure is retarding growth by 2 percentage points each year Solving the problem will cost over US 90 billion per year which is more than twice what is being spent in Africa today However money alone is not the answer Prudent policies wise management and sound maintenance can improve efficiency thereby stretching the infrastructure dollar There is the potential to recover an additional US 17 billion a year from within the existing infrastructure resource envelope simply by improving efficiency For example improved revenue collection and utility management could generate US 3.3 billion per year Regional power trade could reduce annual costs by US 2 billion And deregulating the trucking industry could reduce freight costs by one half So raising more funds without also tackling inefficiencies would be like pouring water into a leaking bucket Finally the power sector and fragile states represent particular challenges Even if every efficiency in every infrastructure sector could be captured a substantial funding gap of 31 billion a year would remain Nevertheless the African people and economies cannot wait any longer Now is the time to begin the transformation to sustainable development
