general framework for computing large parts of the Lax spectrum for periodic and quasiperiodic solutions of a general class of PDEs possessing a Lax pair This class consists of the AKNS hierarchy admitting a common reduction and generalizations I then relate the Lax spectrum to the stability spectrum using the squared eigenfunction connection Using this I demonstrate that the subset of the real line which is part of the Lax spectrum maps to stable elements of the linearization Several examples that demonstrate the direct applicability of this work are provided One example is worked out in detail the stability analysis for the elliptic solutions of the focusing nonlinear Schr dinger NLS equation For the NLS equation I go further by establishing orbital stability of the elliptic solutions with respect to a class of perturbations of integer multiples of the period of the solution **Stability of Nonautonomous Differential Equations** Luis Barreira,Claudia Valls,2007-09-26 This volume covers the stability of nonautonomous differential equations in Banach spaces in the presence of nonuniform hyperbolicity Topics under discussion include the Lyapunov stability of solutions the existence and smoothness of invariant manifolds and the construction and regularity of topological conjugacies The exposition is directed to researchers as well as graduate students interested in differential equations and dynamical systems particularly in stability theory *Stability of Solutions of Differential Equations in Banach Space* Mark Grigor'evich Kreĭn,1974 *Stability of Solutions of Differential Equations in Banach Space* Jurij L.
