Dynamics of Mechanical Systems with Coulomb Friction Le Xuan Anh, 2012-12-06 This book addresses the general theory of motion of mechanical systems with Coulomb friction In particular the book focuses on the following specific problems derivation of the equations of motion Painleve s paradoxes tangential impact and dynamic seizure and frictional self excited oscillations In addition to the theoretical results the book contains a detailed description of experiments that show that in general the friction force at the instant of transition to motion is determined by the rate of tangential load and does not depend on the duration of the previous contact These results are used to develop the theory of frictional self excited oscillations A number of industrially relevant mechanisms are considered including the Painleve Klein scheme epicyclic mechanisms crank mechanisms gear transmission the link mechanism of a planing machine and the slider of metal cutting machine tools The book is intended for researchers engineers and students in mechanical engineering

Friction and Instabilities J.A.C. Martinis, M. Raous, 2014-05-04 The book addresses instability and bifurcation phenomena in frictional contact problems The treatment of this subject has its roots in previous studies of instability and bifurcation in elastic thermoelastic or elastic plastic bodies and in previous mathematical mechanical and computational studies of unilateral problems The salient feature of this book is to put together and develop concepts and tools for stability and bifurcation studies in mechanics taking into account the inherent non smoothness and non associativity non symmetry of unilateral frictional contact laws The mechanical foundations the mathematical theory and

the computational algorithms for such studies are developed along six chapters written by the lecturers of a CISM course Those concepts and tools are illustrated not only with enlightening academic examples but also with some demanding industrial applications related namely to the automotive industry **Developments in Theoretical and Applied Mechanics** Grover L.
