Stabilization And Transport Of The Critically Ill:

Resuscitation and Stabilization of the Critically Ill Child Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley, 2008-12-17

The care of the critically ill or injured child begins with timely prompt and aggressive resuscitation and stabilization. Ideally, stabilization should occur before the onset of organ failure in order to achieve the best possible outcomes. In the following pages, an international panel of experts provides an in-depth discussion of the early recognition, resuscitation, and stabilization of the critically ill or injured child. Once again, we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe. Derek S. By some peculiar happenstance, I was nearing completion of a 4-week rotation in the newborn intensive care unit (NICU). The head of the pediatrics clerkship was kind enough to let me have a few days off around the time of the delivery. My wife Cathy was 2 weeks past her due date and had been scheduled for elective induction.
