Stalking The Wild Taboo:

Stalking the Wild Taboo Garrett Hardin, 1973 **Stalking the Wild Taboo**, 1973 **Bulletin of the Atomic Scientists**, 1973-06 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic Doomsday Clock stimulates solutions for a safer world Transmedia Frictions Marsha Kinder, 2014-07-25 Editors Marsha Kinder and Tara McPherson present an authoritative collection of essays on the continuing debates over medium specificity and the politics of the digital arts Comparing the term transmedia with transnational they show that the movement beyond specific media or nations does not invalidate those entities but makes us look more closely at the cultural specificity of each combination In two parts the book stages debates across essays creating dialogues that give different narrative accounts of what is historically and ideologically at stake in medium specificity and digital politics Each part includes a substantive introduction by one of the editors Part 1 examines precursors contemporary theorists and artists who are protagonists in this discursive drama focusing on how the transmedia frictions and continuities between old and new forms can be read most productively N Katherine Hayles and Lev Manovich redefine medium specificity Edward Branigan and Yuri Tsivian explore nondigital precursors Steve Anderson and Stephen Mamber assess contemporary archival histories and Grahame Weinbren and Caroline Bassett defend the open ended mobility of newly emergent media In part 2 trios of essays address various ideologies of the digital John Hess and Patricia R Zimmerman Herman Gray and David Wade Crane redraw contours of race space and the margins Eric Gordon Cristina Venegas and John T Caldwell unearth database cities portable homelands and virtual fieldwork and Mark B N Hansen Holly Willis and Rafael Lozano Hemmer and Guillermo Gmez Pea examine interactive bodies transformed by shock gender and color An invaluable reference work in the field of visual media studies *Transmedia Frictions* provides sound historical perspective on the social and political aspects of the interactive digital arts demonstrating that they are never neutral or innocent *Diagnosing Contemporary Philosophy with the Matrix Movies* O. Bradley Bassler, 2016-12-14 This book charts the shape of future philosophical investigation by posing the question What is the Matrix Guided by the example of the Matrix film trilogy the author examines issues ranging from simulation proof and action to value culture and mythology offering a progressively deeper diagnosis of modern philosophical conditions In contrast to the contemporary focus upon cognitive science and a commitment to the distinction between appearance and reality this book helps readers to explore the argument that such abstractions are inevitably displaced by a more concrete distinction between dreaming and waking with the Matrix as the real and only world we inhabit Researchers and scholars will find this work an engaging and enlightening examination of reality via the medium of popular culture and film **Wildlife and America**, 1978 Il Pianeta Del Futuro Fred Pearce, **Beginning Again** David Ehrenfeld, 1993 Early in this volume David Ehrenfeld describes what prophecy really is Referring to the biblical prophets he says they were not the holy fortunetellers

that the word prophet has come to signify The business of prophecy is not simply foretelling the future rather it is describing the present with exceptional truthfulness and accuracy Once this is done then it can be seen that broad aspects of the future have suddenly become apparent The twentieth century is drawing to a chaotic close amidst portents of unprecedented change and upheaval The unravelling of societies and civilizations and the destruction of nature march together linked a fact whose enormous significance is often lost In *Beginning Again* David Ehrenfeld has undertaken the difficult task of describing the present clearly enough to reveal the future Out of his broad vision emerges a glimpse of a new millennium a vision at once frightening and comforting a scene of great devastation and great rebuilding Ehrenfeld ranges far and wide to present a coherent vision of our relationship with Nature its many aspects and implications as our century opens into the next millennium Whether he is writing about the problem of loyalty to organizations rights versus obligations our over managed society the vanishing of established knowledge the failure of experts the triumph of dandelions Dr Seuss Edward Teller or the future of farming he is always concerned with the intricate interaction between technology and nature As in his classic book *The Arrogance of Humanism* Ehrenfeld never loses sight of our fatal love affair with the fantasy of control We now have no choice he argues but to transform the dream of control of progress from one of overweening hubris love of consumption and the idiot's goal of perpetual growth to one based on the inventive imitation of nature with its honesty beauty resilience and durability Few American writers and even fewer scientists can describe these timeless transcendent qualities of nature so well In *Places* the opening chapter David Ehrenfeld tells about nightly vigils he spent alone on the moonlit beach of Tortuguero watching giant sea turtles emerging from the sea to lay their eggs in the black sand where they were born I could watch the perfect white spheres falling he writes Falling as they have fallen for a hundred million years with the same slow cadence always shielded from the rain or stars by the same massive bulk with the beaked head and the same large myopic eyes rimmed with crusts of sand washed out by tears Minutes and hours days and months dissolve into eons I am on an Oligocene beach an Eocene beach a Cretaceous beach the scene is the same It is night the turtles are coming back always back I hear a deep hiss of breath and catch a glint of wet shell as the continents slide and crash the oceans form and grow

Hidden Twins Olivia Lousada, 2018-03-26 This book finds itself being part of the rising tide of interest and investigation into the nature of relationship experience for siblings same sex twins and opposite sex twins It illuminates adult opposite sex twinship that has been undervalued and even hidden *Human Ecology as Human Behavior* John W. Bennett, 2017-07-05 Human interaction with the natural environment has a dual character By turning increasing quantities of natural substances into physical resources human beings might be said to have freed themselves from the constraints of low technology survival pressures However the process has generated a new dependence on nature in the form of complex socionatural systems as Bennett calls them in which human society and behavior are so interlocked with the management of the environment that small changes in the systems can lead to disaster Bennett's essays cover a wide range from the philosophy of

environmentalism to the ecology of economic development from the human impact on semi arid lands to the ecology of Japanese forest management This expanded paperback edition includes a new chapter on the role of anthropology in economic development Bennett s essays exhibit an underlying pessimism if human behavior toward the physical environment is the distinctive cause of environmental abuse then reform of current management practices offers only temporary relief that is conservationism like democracy must be continually reaffirmed Clearly presented and free of jargon Human Ecology as Human Behavior will be of interest to anthropologists economists and environmentalists The Sandbox Investment David L. Benjamin Gussen,2019-05-17 This book uses historical analysis constitutional economics and complexity theory to furnish an account of city subsidiarity as a legal ethical political and economic principle The book contemplates subsidiarity as a constitutional principle where cities would benefit from much wider local autonomy Constitutional economics suggests an optimal limit to jurisdictional footprints territories This entails preference for political orders where sovereignty is shared between different cities rather states where capital cities dominate The introduction of city subsidiarity as a constitutional principle holds the key to economic prosperity in a globalizing world Moreover insights from complexity theory suggest subsidiarity is the only effective response to the problem of scale It is a fitness trait that prevents highly complex systems from collapsing The nation state is a highly complex system withinwhich cities function as attractors The collapse of such systems would ensue if there were strong coupling between attractors Such coupling obtains under legal monism Only subsidiarity can make the eventuality of collapse improbable The emergent and self organizing properties of subsidiarity entail a shift in policy emphasis towards cities with a wide margin of autonomy
