Russell,2014-04-28 How did openness become a foundational value for the networks of the twenty first century Open Standards and the Digital Age answers this question through an interdisciplinary history of information networks that pays close attention to the politics of standardization For much of the twentieth century information networks such as the monopoly Bell System and the American military s Arpanet were closed systems subject to centralized control In the 1970s and 1980s however engineers in the United States and Europe experimented with design strategies to create new digital networks In the process they embraced discourses of openness to describe their ideological commitments to entrepreneurship technological innovation and participatory democracy The rhetoric of openness has flourished for example in movements for open government open source software and open access publishing but such rhetoric also obscures the ways the Internet and other open systems still depend heavily on hierarchical forms of control   The Computer as Medium Berit Holmqvist,1993 Many industrial training applications educational applications and of course information applications such as databases and hypermedia are all attempts to communicate and yet we really don t know much about the computer as a communicative medium Bringing together a collection of essays presenting such diverse theoretical approaches as general semiotics linguistics communication theory literary and art criticism sociology and history the editors set out to establish and elaborate the role of computer systems as a sign technology The volume is divided into three main parts each focused on a different field of semiotic inquiry Computer Based Signs discusses the special nature of signs produced by means of computers The Rhetoric of Interactive Media deals with codes of aesthetics and composition for the new elastic medium of communication interactive fiction and hypertext Computers in Context analyzes computer technology in the larger cultural historical and organizational contexts Scholars in computer science cognitive science organization theory
