Geometric Transformations IV I. M. Yaglom, 2009-10-15 The familiar plane geometry of high school figures composed of lines and circles takes on a new life when viewed as the study of properties that are preserved by special groups of transformations No longer is there a single universal geometry different sets of transformations of the plane correspond to intriguing disparate geometries This book is the concluding Part IV of Geometric Transformations but it can be studied independently of Parts I II and III which appeared in this series as Volumes 8 21 and 24 Part I treats the geometry of rigid

motions of the plane isometries Part II treats the geometry of shape preserving transformations of the plane similarities Part III treats the geometry of transformations of the plane that map lines to lines affine and projective transformations and introduces the Klein model of non Euclidean geometry The present Part IV develops the geometry of transformations of the plane that map circles to circles conformal or anallagmatic geometry The notion of inversion or reflection in a circle is the key tool employed Applications include ruler and compass constructions and the Poincar model of hyperbolic geometry The straightforward direct presentation assumes only some background in high school geometry and trigonometry Numerous exercises lead the reader to a mastery of the methods and concepts The second half of the book contains detailed solutions of all the problems *Mathematics Magazine* ,1986 **Geometry Revisited** H. S. M. Coxeter,Samuel L. Greitzer,1967 A fascinating collection of geometric proofs and properties *Teaching Secondary School Mathematics* Alfred S. Posamentier,Jay Stepelman,1999 Resource for inservice and pre service mathematics teachers The text discusses methods of teaching the subject and provides a collection of enrichment units to enhance the curriculum
