

The History of Psychology- Ancient and Modern Beliefs

Greek philosophers played a crucial role in shaping ancient psychological thought!

Socrates, known for the Socratic method, encouraged self-reflection and questioning as means of gaining knowledge about oneself.

Plato, a student of Socrates, explored the nature of the soul and the role of reason in controlling emotions. His allegory of the cave discussed the impact of perception on human understanding.

Aristotle, another influential Greek philosopher, put five topics such as memory, perception, and emotions. His theories on the four humors and the concept of the "virtuous mean" (which doesn't influenced later psychologists

Phrenology was developed by a man named Franz Joseph Gall, who believed that different parts of the brain were responsible for different personality traits and abilities. He thought that the shape and size of someone's head could reveal what kind of person they were.

According to phrenology, the brain was divided into various "organs," each related to a specific trait or ability. For example, there was an organ for music, one for language, one for emotions, and so on. These organs were said to be located on the surface of the brain, and their development or size could be determined by feeling the bumps on someone's head. Basically, the idea was that the more prominent a bump, the stronger that specific trait would be in a person.

Phrenology quickly gained popularity because it seemed like a fascinating way to understand people's inner selves. It was even believed that by studying the shape of someone's head, you could predict their potential talents or even their criminal tendencies.

However, it's important to know that phrenology eventually fell out of favor among scientists. As our understanding of the brain improved, it became clear that Gall's ideas were unscientific and not supported by scientific evidence. Modern neuroscience has taught us that the brain is much more complex.

Worksheet: Put the number in where the answer can be found.

- 1 What did these scientists believe that someone's head was phrenology?
- 2 What was the main idea of phrenology?
- 3 What parts of the brain were related to it?
- 4 What are the two reasons why people eventually turned away from phrenology?

Some changes in arrangement have been made in the order of lectures the two on Time now follow immediately the two on the spatial symbol of Height Four lectures have been omitted altogether from the present volume those on image worship and doctrines condemning the manufacture of images in antiquity and in the Christian Church Since in the rest of the lectures the symbolism of material objects in worship was not the kind of symbolism under consideration these four lectures seemed somewhat of a digression from the main line of argument I hope later on to issue them as a small book by themselves
