Goal-driven Learning Ashwin Ram, David B. Leake, 1995 Brings together a diversity of research on goal driven learning to establish a broad interdisciplinary framework that describes the goal driven learning process In cognitive science artificial intelligence psychology and education a growing body of research supports the view that the learning process is strongly

influenced by the learner's goals. The fundamental tenet of goal-driven learning is that learning is largely an active and strategic process in which the learner, human or machine, attempts to identify and satisfy its information needs in the context of its tasks and goals, its prior knowledge, its capabilities, and environmental opportunities for learning. This book brings together a diversity of research on goal-driven learning to establish a broad interdisciplinary framework that describes the goal-driven learning process. It collects and solidifies existing results on this important issue in machine and human learning and presents a theoretical framework for future investigations. The book opens with an overview of goal-driven learning research and computational and cognitive models of the goal-driven learning process. This introduction is followed by a collection of fourteen recent research articles addressing fundamental issues of the field, including psychological and functional arguments for modeling learning as a deliberative, planful process; experimental evaluation of the benefits of utility-based analysis to guide decisions about what to learn; case studies of computational models in which learning is driven by reasoning about learning goals; psychological evidence for human goal-driven learning and the ramifications of goal-driven learning in educational contexts. The second part of the book presents six position papers reflecting ongoing research and current issues in goal-driven learning. Issues discussed include methods for pursuing psychological studies of goal-driven learning; frameworks for the design of active and multistrategy learning systems; and methods for selecting and balancing the goals that drive learning. A Bradford Book. *China's New Enterprise Bankruptcy Law* Yongqian Xu, Haizheng Zhang, 2016-05-23

China has recently entered a significant stage in its economic transition with the introduction of a new and seemingly sophisticated bankruptcy law drawing inspiration from mature insolvency systems. However, this new law is likely to face significant challenges within its implementation due to weaknesses in the country's legal and social infrastructure. China's New Enterprise Bankruptcy Law clearly presents the structure of China's reformed legal bankruptcy system by introducing the framework and analyzing typical cases which have been or are being heard since the new bankruptcy law was operational. Written by Chinese experts with a professional interest and specialist knowledge of insolvency law, this volume serves as an indispensable guide for academics and researchers in the area as well as practitioners and professionals involved with Chinese business law. *Black's Student Veterinary Dictionary* Edward Boden, Anthony Andrews, 2017-03-24 A paperback edition for the student market, this standard work of reference has been a bestseller for over 70 years.
