policy In order to address this it discusses the key structural differences between advanced and developing countries in order to justify the construction of alternative models *Developing Countries In The World Economy* Jaime De Melo, 2015-03-26

Differences in the choices of trade and macro policies both by developing countries and by developed countries towards developing countries have been critical in determining the overall performance of developing countries All too often the performance of developing countries has not been assessed using appropriately conducted studies The papers in this book are chosen to bridge this gap and show how a quantitative approach to policy evaluation can help resolve controversies and explain the choice of observed policies The book brings together carefully selected papers that assess the impacts of various trade and macro policies by quantifying the policies of developing countries at the macro level exchange rate investment savings and at the sector level trade and industrial policies in addition to policies of developed countries towards developing countries trade preferences quotas VERs and migration policies Facets of the political economy of trade migration and climate policies are explored such as the enlargement of the EU the rise of regionalism and how it can ease the pains of adjustment to trade liberalization openness and inequality Growing tensions between trade and the environment are also investigated In short this book covers a wide area of events ranging from external and internal shocks to external and internal policies showing how the consequences of these events can be brought to rigorous quantitative analysis **Beating the Odds** Justin Yifu Lin, Célestin Monga, 2017 How poor countries can ignite economic growth without waiting for global action or the creation of ideal local conditions Contrary to conventional wisdom countries that ignite a process of rapid economic growth almost always do so while lacking what experts say are the essential preconditions for development such as good infrastructure and institutions In *Beating the Odds* two of the world's leading development economists begin with this paradox to explain what is wrong with mainstream development thinking and to offer a practical blueprint for moving poor countries out of the low income trap regardless of their circumstances Justin Yifu Lin the former chief economist of the World Bank and Célestin Monga the chief economist of the African Development Bank propose a development strategy that encourages poor countries to leap directly into the global economy by building industrial parks and export processing zones linked to global markets Countries can leverage these zones to attract light manufacturing from more advanced economies as East Asian countries did in the 1960s and China did in the 1980s By attracting foreign investment and firms poor countries can improve their trade logistics increase the knowledge and skills of local entrepreneurs gain the confidence of international buyers and gradually make local firms competitive This strategy is already being used with great success in Vietnam Cambodia Bangladesh Mauritius Ethiopia Rwanda and other countries And the strategy need not be limited to traditional manufacturing but can also include agriculture the service sector and other activities *Beating the Odds* shows how poor countries can ignite growth without waiting for global action or the creation of ideal local conditions The Economics of Development Everett Einar Hagen, 1975 The growth of world income The positive economics of growth The allocation of

International Handbook on the Economics of Corruption Susan

Rose-Ackerman, 2007-01-01 This collection of articles offers a comprehensive assessment of the subtle but nevertheless pervasive economic infrastructure of corruption. It provides suitable core or adjunct reading for law school graduate and undergraduate courses on international economics, international relations, and international law. American Society of International Law. This exhaustive collection, edited by Rose Ackerman, cannot be called anything but excellent. Overall, a wonderful addition to the literature. Highly recommended. C. J. Talele. Choice. Susan Rose Ackerman is a world class economist and an authority on the economics of corruption. This is a fine reference volume that every economist interested in this important subject will want to have as a ready reference. Jagdish Bhagwati, Columbia University. US Economic research on corruption aims both to isolate the economic effects of quid pro quo deals between agents and third parties and to suggest how legal and institutional reforms might curb harms and enhance benefits. In this comprehensive Handbook, top scholars in the field provide specially commissioned essays, both theoretical and empirical, exploring both types of research. The Handbook begins with an introductory essay by the editor, followed by two chapters written by leading exponents of cross-country research. However, the focus of the Handbook is on research at the micro level, where policy can be made and evaluated. These microeconomic studies fall into several overlapping categories. The first group includes studies that link corrupt incentives to institutional structures, particularly the organization of the state. The second draws implications from surveys of households or businesses and from controlled experiments. The third concentrates on particular sectors, such as education, tax administration, public works, customs services, and pharmaceuticals. Finally, two chapters assess corruption in the transition away from socialism in Europe and Asia.
