Transforming Violent Political Movements Kevin E. Grisham,2014-03-21 This book explores the factors that influence violent rebellious political organisations to transform into other entities such as political parties, criminal organisations, and terrorist organisations. From the end of the Second World War until 1990, many events in the world centred on the bipolar struggle between the United States and the USSR. Although there were numerous civil wars occurring during the Cold War era, many of these conflicts went virtually unnoticed unless they were linked to the Cold War struggle for ideological dominance. In the aftermath of the fall of the Soviet Union, the number of intra-state conflicts was prevalent around the globe. Along with the occurrence of civil wars, a variety of violent political movements also developed. Examining cases from Latin America, Africa, Europe, and Asia, this book addresses how violent political movements transform during and after conflict into new types of organisations using the collective political violence transformative CPVT model. The study uses a combination of pre-existing literature from the fields of sociology and political science, archival research, and interviews with movement members, former and active, conducted by the author. In studying the Provisional IRA and Sinn Féin in the Spear of the Nation, MK, and the African National Congress (ANC), the Abu Sayyaf Group, and the Revolutionary Armed Forces of Colombia (FARC-EP), *Transforming Violent Political Movements* paints a picture of organisations that have to respond to their environments to survive. This book will be of much interest to students of political violence, terrorism, war, and conflict studies, security studies, and IR.

Post-Modernism and the Social Sciences Pauline Marie Rosenau,1991-11-05 Post modernism offers a revolutionary approach to the study of society in questioning the validity of modern science and the notion of objective knowledge. This movement discards history, rejects humanism, and resists any truth claims. In this comprehensive assessment of post modernism, Pauline Rosenau traces its origins in the humanities and describes how its key concepts are today being applied to and are restructuring the social sciences. Serving as neither an opponent nor an apologist for the movement, she

cuts through post modernism's often incomprehensible jargon in order to offer all readers a lucid exposition of its propositions. Rosenau shows how the post modern challenge to reason and rational organization radiates across academic fields. For example, in psychology it questions the conscious logical coherent subject; in public administration it encourages a retreat from central planning and from reliance on specialists; in political science it calls into question the authority of hierarchical bureaucratic decision making structures that function in carefully defined spheres; in anthropology it inspires the protection of local primitive cultures from First World attempts to reorganize them. In all of the social sciences she argues post modernism repudiates representative democracy and plays havoc with the very meaning of left wing and right wing. Rosenau also highlights how post modernism has inspired a new generation of social movements ranging from New Age sensitivities to Third World fundamentalism. In weighing its strengths and weaknesses, the author examines two major tendencies within post modernism: the largely European skeptical form and the predominantly Anglo North American form which suggests alternative political, social and cultural projects. She draws examples from anthropology, economics, geography, history, international relations, law, planning, political science, psychology, sociology, urban studies and women's studies and provides a glossary of post modern terms to assist the uninitiated reader with special meanings not found in standard dictionaries.

Theory-Based Data Analysis for the Social Sciences Carol S. Aneshensel, 2013. This book presents the elaboration model for the multivariate analysis of observational quantitative data. This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified. Two complementary strategies are used: an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories, and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable. The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results. The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it. These studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace, subjective age identification during the transition to adulthood, and the relationship between religious and paranormal beliefs. The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model. Using real data, not contrived examples, the text provides a step by step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions.

Science Education for the Future Norman Reid, Khaled Ahmed Al-Madani, Fatheya Mahmood Al-Ahmadi, 2025-04-01. This book draws on the wealth of worldwide research into science education to establish a set of key principles for teaching secondary science. It considers the aims of science education and

the themes and topics that should be included in the curriculum and how these can be effectively taught and assessed in a variety of contexts Offering a framework for the training and professional development of science teachers the chapters answer key questions such as How can I help my students to make sense of difficult areas in my subject What is meant by understanding and how can I help my students achieve it Is it possible to teach scientific thinking and how can I do it What about learner attitudes when they are sometimes negative What are the different ways to teach in the sciences that are effective How can I make learning in the laboratory more efficient and effective How can I employ assessment as a positive aid to learning Including reflective questions tasks and diagrams this is essential reading for all student and practising secondary science teachers [Studyguide for the Elements of Social Scientific Thinking by Kenneth R.
