The Enclosure Of Ocean Resources Economics And The Law Of The Sea:

The Enclosure of Ocean Resources Ross D. Eckert, 1979 **International Law of the Sea and Marine Affairs** Nikos Papadakis, Martin Ira Glassner, 1984-04-06 **International Law of the Sea and Marine Affairs** **A handbook on the new law of the sea. 2 (1991)** René Jean Dupuy, Daniel Vignes, 1991-10-16 The fact that the Montego Bay Convention has been only ratified by 37 States at present and that it will be some time before the 60 ratifications required by Article 308 are achieved has not prevented states from acting in accordance with the rules drawn up by the Conference. Close on one hundred states have established either exclusive economic zones broadly modelled on Part V or 200 nautical mile fishery zones and drawn on the principles laid down for exploiting living resources. Although these laws have been formulated unilaterally by states, international custom since the judgement by the International Court of Justice in the Fisheries Case of 18 December 1951 is derived from concordant national rules. This shift began even before the Conference ended and has been consolidated since then. Moreover, the regime governing the sea bed beyond the limits of national jurisdiction defined by Part XI which was the stumbling block of the Conference is subject to transitional arrangements on the basis of two resolutions adopted in the Conference's Final Act: one providing for the establishment of a Preparatory Commission and the other on the preliminary activities of pioneer investors. This two volume work, an earlier edition of which appeared in French, has been written by a team of experts of international renown. It presents an analysis of the Convention with an additional Chapter on the legal regime governing underwater archaeological and historical objects. Managing Ocean Resources Robert L. Friedheim, 2019-03-13 This comprehensive collection of data and theory provides an essential resource base for intelligent ocean management decisions. The book begins with essays on ocean science and technology, social and political organization, theory relating to the oceans and some of the problems of extracting energy from the oceans and monitoring oceans from space. *A Handbook on the New Law of the Sea, Volume 2* Daniel Vignes, R.J. Dupuy, 2023-09-20 The fact that the Montego Bay Convention has been only ratified by 37 States at present and that it will be some time before the 60 ratifications required by Article 308 are achieved has not prevented states from acting in accordance with the rules drawn up by the Conference. Close on one hundred states have established either exclusive economic zones broadly modelled on Part V or 200 nautical mile fishery zones and drawn on the principles laid down for exploiting living resources. This two volume work, an earlier edition of which

appeared in French has been written by a team of experts of international renown. It presents an analysis of the Convention with an additional Chapter on the legal regime governing underwater archaeological and historical objects. **Marine Policy and Economics** Porter Hoagland, John H. Steele, Steve A. Thorpe, 2010. This title is an important reference on current knowledge and expertise in one convenient and accessible source. The selected articles all written by experts in their field fall into several categories. **Marine Mineral Resources** Fillmore C. F. Earney, 2012-11-12. During the past century scientists, world statesmen and international entrepreneurs have become increasingly aware of the potential of the oceans as a source of minerals. This book provides an authoritative picture of the current state of marine mineral extraction. A major work of reference, it will be essential reading for both those engaged in maritime studies and for professional organisations involved in the extraction of underwater minerals. **Equitable Principles of Maritime Boundary Delimitation** Thomas Cottier, 2015-04-30. Equity emerged as a powerful symbol of aspired redistribution in international relations. Operationally, it has had limited impact in the Westphalian system of nation states except for maritime boundary delimitations. This book deals with the role of equity in international law and offers a detailed case study on maritime boundary delimitation in the context of the enclosure movement in the law of the sea. It assesses treaty law and the impact of the United Nations Convention on the Law of the Sea. It depicts the process of trial and error in the extensive case law of the International Court of Justice and arbitral tribunals and expounds the underlying principles and factors informing the methodology both in adjudication and negotiations. Unlike other books, the main focus is on equity and its implications for legal methodology, in particular offering further guidance in the field of international economic law. **The IMLI Treatise On Global Ocean Governance** David Joseph Attard, David M Ong, Dino Kritsiotis, 2018-07-04. The 1982 United Nations Convention on the Law of the Sea (UNCLOS) remains the cornerstone of global ocean governance. However, it lacks effective provisions or mechanisms to ensure that all ocean space and related problems are dealt with holistically. With seemingly no opportunity for revision due to the Convention's burdensome amendment provisions, complementary mechanisms dealing with such aspects of global ocean governance, including maritime transport, fisheries and marine environmental sustainability, have been developed under the aegis of the United Nations and other relevant international organizations. This approach is inherently fragmented and unable to achieve sustainable global ocean governance. In light of the Sustainable Development Goals (SDGs), particularly Goal 14, the IMLI Treatise proposes a new paradigm on the basis of an integrated and cross-sectoral approach in order to realise a more effective and sustainable governance regime for the oceans. This volume focuses on the role of the UN as the central intergovernmental organization responsible for global ocean governance. It examines the ocean governance challenges and how the present legal policy and institutional frameworks of the UN have addressed these challenges. It identifies the strengths and weaknesses of UN legal structures and offers tangible proposals to realize the ambition of a global ocean governance system. **Fisheries Economics, Volume II** Lee G. Anderson, 2020-01-16. This title was first published in 2002.

This important collection of international research on fisheries economics offers a comprehensive source of contemporary research on key topics in the field as well as presenting the history of how the economic theory of fisheries exploitation has developed. Bringing into focus a wide range of inquiry, this second volume concentrates on extensions, analysis of management agencies and applications. Individual papers examine fundamental issues including multispecies models, international utilization and recreational fisheries. Fisheries Economics is an invaluable research reference collection for the libraries of academic and other professional economists as well as an indispensable resource for those studying across the fields of natural resources, fisheries economics and particularly fisheries management.

The Global Commons Susan J. Buck, 2017-09-25. Antarctica, the high seas and deep seabed, the atmosphere and space are increasingly accessible and exploited resource domains. Collectively known as the global commons, they represent a new and profound challenge for international law and institutions. In *The Global Commons*, Susan Buck considers the unique physical, legal, management and policy problems associated with these areas. The book is a clear, useful introduction to the subject that will be of interest to general readers as well as to students in international relations, international law and environmental law and policy.

[Japan And The New Ocean Regime](#) Robert L. Friedheim, 2019-02-22. The regime under which humankind has governed its uses of the ocean is in the process of change, shifting away from the traditional freedom of the seas toward a mixed system in which most of the valuable near shore resources come under coastal jurisdiction. The transition to a new regime has been difficult for many states, most notably Japan, whose rights to use the entire ocean were well protected by the traditional regime. Japan's response to the need to develop a modern ocean policy to adapt to the emerging ocean management regime is the subject of this multi-author volume. U.S. and Japanese scholars look at what Japan is doing, how and with what results. They first assess general trends in ocean management, then examine the role of Japan in the international political economy of the oceans and finally look at Japan's ocean policy in various sectors: shipbuilding, fisheries, mineral resources, offshore petroleum and nuclear power generation. Given Japan's importance in ocean affairs, the authors point out that the lessons that can be learned from its experience are of prime international importance.

Water, Sovereignty and Borders in Asia and Oceania Devleena Ghosh, Heather Goodall, Stephanie Hemelryk Donald, 2009-01-21. From oceans and rivers to lagoons, billabongs and estuaries, this volume draws on water's many formations in debating human relationships as a major source of life and a major factor in contemporary politics.

The Theory And Structures Of International Political Economy Todd Sandler, 2020-01-29. The purpose of this book is to examine the feasibility, evolution and future of international linkages such as environmental pacts and agreements, military alliances, the World Health Organization, the Strategic Arms Limitation treaties and energy power pools. International interactions involving weather modification, outer space exploitation and the oceans are also investigated. The analyses of the book conceptualize and examine international linkages rather than present a utopian view of world governments.

The International Political Economy of Natural Resources Mark W. Zacher, 1993. This important reference

collection includes the seminal literature on the political economy of natural resources broadly defined as not only minerals but also energy sources and agriculture It includes key articles and papers on the politics of international markets in these resources the effects of these markets on the world economy and on the domestic political economy as well as the domestic politics of policymaking on international resources Pacific Ocean Boundary Problems Mark J. Valencia, 2022-07-04

Privatization Becky Mansfield, 2009-03-25 Contemporary privatization remakes nature society as property and transforms people's relationships to themselves each other and the natural world This groundbreaking collection provides the first systematic analysis of neo liberal privatization Rich case studies of privatization in the making reveal both the pivotal role that privatization plays in neoliberalism and new opportunities for challenging neo liberal hegemony Rich case studies linked to broader questions on neoliberalism Illustrates the importance of property relation and the complexities existing in the meaning and practice of property Extends current geographical scholarship on neoliberalism including neoliberalism and nature Each essay touches on the disciplinary regulatory dimensions of privatization Highlights the importance of privatization both broadly and specifically

The Social Construction of the Ocean Philip E. Steinberg, 2001-10-25 This 2001 book presents a history of the uses regulations and representation of the world ocean from approximately 1450 through the present This history is told through a territorial political economy lens borrowing from world systems theory economic geographic studies of the spatiality of capitalism political geographic work on the history of territoriality and post structural work on social conflict in the production of space Just as the modern era has been characterized by a conflicting set of dynamic and contested spatiality on land so has it been characterized by a conflicting set of spatial functions at sea Evidence is marshaled from legal texts literary and artistic creations cartographic representations advertisements commercial and military history and policy debates The book concludes by considering how lessons learned from the history of the ocean may be applied to emerging spaces such as cyberspace where there is a similarly problematic fit between social processes and the institutions of state governance

The Theory and History of Ocean Boundary-making Douglas M. Johnston, 1988 In the classical and neo classical periods of international law the law of the sea was chiefly concerned with the need to facilitate the movement of ships In the post World War II period however coastal states began to make jurisdictional claims to extensive areas of the ocean requiring decisions on how ocean boundaries are to be established and maintained **Marine Affairs**
