Cell Biology A Comprehensive Treatise V3 David M. Prescott, 2012-12-02 Cell Biology A Comprehensive Treatise Volume 3 Gene Expression The Production of RNA s mainly discusses the molecular and cytological bases of gene expression The coverage begins with the concepts of organization of DNA and gene sequences in chromosomes as an introduction to a more detailed coverage of gene expression The book opens with a general discussion on the organization of DNA sequences in chromosomes This chapter includes different methods of analyzing DNA sequences As the book progresses it looks upon the details on gene reiteration and amplification up to the transcription of prokaryotes and eukaryotes It includes the ways of regulating transcription The following chapters deal mostly with the structure and activity of genes up to the different virus strains in both RNA and DNA The cytoplasmic and environmental impact on gene expression is also discussed Chapter 8 generally tackles the DNA conformation and template function The succeeding chapters focus on the transfer and ribosomal RNA as a result of maturation events the processing of hnRNA and its relation to mRNA and recombinant DNA procedures The book closes with the directory of the different classes of cellular RNAs This book will be helpful to many graduate students teachers scientists and researchers in need of information regarding cell biology **The Chromosomal Proteins**

E Johns, 2012-12-02 The HMG Chromosomal Proteins focuses on various research on HMG proteins particularly their association with active genes Composed of literature of authors that are divided into 10 chapters the book starts with the discussions on the history and problems in the study of chromosomal proteins The text proceeds with the discussions on the occurrence of HMG proteins in eukaryotes tissue specificity of HMG proteins and species specificity and evolution of HMG proteins The book presents techniques that are used to analyze HMG proteins and provides information on the primary structures of different proteins such as HMG 14 and HMG 17 and the methods for cleaving these proteins The processes involved in isolating proteins and postsynthetic modifications of their structures are noted clarified with the study done on the HMG proteins of rainbow trout The text ends with discussions on the association of HMG proteins with chromatin and nucleosomes and a tabulation of accumulated data This selection is valuable for readers interested in studying HMG proteins

Nucleocytoplasmic Transport Reiner Peters, Michael Trendelenburg, 2012-12-06 New Approaches in Eukaryotic DNA Replication A. De Recondo, 2012-12-06 DNA replication in eukaryotes is an important field particularly because of its direct impact on the study of cancer The understanding of molecular mechanisms of replication and their regulation should allow a better comprehension of the alterations that lead to the proliferation of tumor cells and to error prone repair in cells exposed to radiation or chemical carcinogens During the last several years many enzymes and proteins which participate in replication of DNA in eukaryotic cells have been identified isolated and characterized New concepts in chromatin structure have refocused attention on the study of replication of DNA complexed with histones and non histone chromosomal proteins However progress has been noticeably slower than for prokaryotes essentially because of the difficulty in genetic analysis of

eukaryotic DNA replication In June 1980 a workshop was organized in Cargèse Corsica France to facilitate exchanges of information between workers specializing in prokaryotes and those specializing in eukaryotes and to allow discussion of new experimental approaches With this in mind special interest has been taken in the origin and termination of chromosome cycles and how they are controlled Progress in Nonhistone Protein Research I. Bekhor Isaac, 2018-05-04 The purpose of this text is to encourage research on nonhistones and to stimulate the imagination of other investigators whose future efforts might result in new discoveries as to the significance of these proteins *Origins of Sex* Lynn Margulis, Dorion Sagan, 1990-01-01 A fascinating and detailed examination of the evolution and occasional devolution of sexuality in microorganisms and more complex forms of life Margulis and Sagan trace sex from its inauspicious beginnings in bacteria threatened by ultraviolet radiation to its intimate relation with the origin of mitotic division of nucleated cells The origin of meiotic sex through cannibalism followed by centriole reproductive tardiness and the connection of cell symbiosis to sex and differentiation are explored The authors have not only given us a new and exiting scenario for the evolution of sex but have also provided us with critical ways in which we can test their hypotheses This is a stimulating book that is sure to invoke criticism and discussion I strongly recommend it Symbiosis The book is well organized and well written leading the reader from one thought to another almost effortlessly Background information is presented to aid those of us who are not experts in this field and a glossary is appended The book could be used at all levels of study from interested undergraduates in general biology through postdoctoral students of genetics and evolution I recommend this thought provoking book to you for both your enjoyment and your enlightenment Richard W Cheney Jr Journal of College Science Teaching This book undoubtedly controversial is a thoughtful and original contribution to an important aspect of cellular biology John Langridge *Advances in Genetics*, 1984-02-22 *Advances in Genetics* *The Cytoskeleton, Part A*, 1982-08-04 *The Cytoskeleton Part A* **Current Topics in Developmental Biology**, 1983-03-28 *Current Topics in Developmental Biology* Federation Proceedings Federation of American Societies for Experimental Biology, 1978-03 Vols for 1942 include proceedings of the American Physiological Society
