The Effects of Deregulation on U.S. Air Networks Aisling J. Reynolds-Feighan, 2012-12-06 1 1 A Brief History of U S Commercial Aviation Regulation and Deregulation The U S commercial aviation industry was regulated by the government for a period of 40 years beginning in 1938 with the passing of the Federal Aviation Act and ending in October 1978 when President Carter signed into law the Airline Deregulation Act ADA There were 16 airlines in existence when the Federal Aviation Act was passed in 1938 the so called trunk lines The Act established the Civil Aeronautics Authority CAA as the industry s regulatory body The Act was passed principally because it was felt that the free market if allowed to continue unregulated for much longer would put many of these firms into bankruptcy It is possible therefore to view the CAA of 1938 re organized into the Civil Aeronautics Board CAB in 1940 as a response to a potential market failure at the time In the 1930s few air traffic markets could have efficiently supported more than one airline operating in the market Panzar 1980 Competition among the carriers was cut throat and it was felt that the near bankruptcy of the airlines in the period was caused principally by the competitive bidding system used by the Post Office in allotting airmail subsidies Keeler 1972 Caves 1962 The Airline Mergers and Their Effect on American Consumers United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Commerce, Trade, and Consumer Protection, 2001 Air Transport Networks Kenneth John Button, Roger Stough, 2000-01-01 An economic analysis of the way in which the air transport industry operates and the nature of the policies that have been adopted to regulate the sector The authors cover domestic and international air transportation with an emphasis on airlines *Handbook of Industry Studies and Economic Geography* Frank Giarratani, Geoffrey J. D. Hewings, Philip McCann, 2013-12-27 This unique Handbook examines the impacts on and responses to economic geography explicitly from the perspective of the behaviour mechanics systems and experiences of different firms in various types of industries The industry studies approach all Airline Network Development in Europe and its Implications for Airport Planning Guillaume Burghouwt, 2016-03-23 The ongoing deregulation and liberalization of worldwide air transport markets confronts airport planners with an increasingly problematic context On the one hand the capital intensive large scale and complex airport investments need a detailed long medium term planning of airport infrastructure Such planning requires at least predictable traffic volumes and traffic composition within the planning horizon On the other hand airline route networks are increasingly dynamic structures that frequently show discontinuous changes As a consequence the much more volatile airport traffic restricts the value of detailed traffic forecasts Volatility of airport traffic and its composition requires flexibility of airport strategies and planning processes The book explores this dilemma through a detailed study of airline network development airport connectivity and airport planning in the deregulated EU air transport market The questions the book seeks to answer are how have airlines responded to the regime changes in EU aviation with respect to the configuration of their route networks what has been the impact of the reconfiguration of airline network

configurations for the connectivity of EU airports how can airport planners and airport authorities deal with the increasingly uncertain airline network behaviour in Europe

The Economic Effects of Air Transport Market Liberalisation Eyden Samunderu, 2024-09-19 This book rigorously examines the air transport market liberalisation process on the African continent and presents key highlights challenges and impediments to embracing an open skies market environment in Africa It focuses on the economic impact of air transport liberalisation policy constraints challenges of harmonisation and regional economic integration and its impact on air transport development employing a quantitative assessment based on the Air Transport Liberalisation Index ALI to evaluate how an open skies policy would change the competitive dynamics of air transport in Africa Adopting a two tier gravity model the book explores how demand and route networks would be impacted by the deregulation of the air transport market The book also applies a historical perspective by evaluating the initial ratification of the Yamoussoukro Declaration 1999 which acted as a catalyst for Africa's 2063 regional agenda focused on establishing the Single African Air Transport Market SAATM The book also provides a comprehensive analysis of the African Continental Free Trade Area AfCFTA exploring its multifaceted impacts on Africa's single market from economic regulatory and sustainability perspectives This includes an introduction to the AfCFTA highlighting its inception as a major step towards continental economic integration aimed at enhancing intra African trade promoting sustainable development and fostering industrial diversification It then examines the capacity and competency building of African aviation personnel Training gaps and skills are extensively evaluated to ensure that the African region is prepared for the new competitive equilibrium post SAATM The book also raises critical questions regarding the status of the African air transport market Firstly with the introduction of an open skies policy in Africa will the national flag carriers be able to compete under the new market dynamics Will the SAATM become a game changer in paving the way for the privatisation of some of Africa's poor performing airlines Will the SAATM create a competitive market and a shift in airfares How will policymakers deal with the excessive aviation taxes fees and charges that make airfares in Africa the highest in the world What will the economic benefits be for signatory states that embrace the SAATM Will there be a significant growth trajectory in terms of air travel demand This book is intended for researchers studying air transport economics in developing markets graduate students with a primary focus on air transport development senior policymakers and professionals at governmental agencies and industry practitioners who want to expand their understanding of the dynamics shaping Africa's air transport landscape

Equilibrium Facility Location on Networks Tan C. Miller, Terry L. Friesz, Roger L. Tobin, 2013-04-18 This is a book about the simultaneous location production and distribution decisions of a firm entering a competitive market whose spatial nature is describable by a network in which the market either achieves an equilibrium or is equilibrium tending As such the problem is of clear theoretical and practical importance for it is a rather general version of the problem faced by real firms every day in deciding where to locate Further the timeliness of this subject manifests itself in the growing excitement and

interest found both in the research academic communities and in the practitioner private industry communities for more comprehensive approaches to competitive facility location analysis and equilibrium modeling of networks. The desire both for new conceptual approaches yielding enhanced insights and for practical methodologies to capture these insights drives this interest. While non-native deterministic facility location modeling techniques currently provide valuable input into the location decision making process, researchers and practitioners alike have realized the vast and relatively untapped potential of more advanced location decision making techniques. In this book we develop what we believe represents a major new line of research in the field of competitive facility location analysis, namely equilibrium facility location modeling. In particular, this book offers a number of innovations in the mathematical analysis and computation of solutions to location models which we have pioneered and which are collected under a single cover for the first time.

Patterns of a Network Economy Börje Johansson, Charlie Karlsson, Lars Westin, 2012-12-06 Network economics is a new rapidly developing field. In this volume theoretical and empirical contributions are collected, each dealing with different aspects of the network economy. The book assesses networks as a complement to pure market relations and studies innovation networks and strategic alliances among innovative corporations. Product differentiation and specialization in reciprocal networks are emphasised as a strategy of sustainable development. The book presents econometric methods of barrier and network analysis including communication and trade patterns.

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005 Geography in America at the Dawn of the 21st Century surveys American geographers' current research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such it is both a state of the discipline assessment and a topical reference. It includes an introduction by the editors and 47 chapters each on a specific

specialty The authors of each chapter were chosen by their specialty group of the American Association of Geographers AAG Based on a process of review and revision the chapters in this volume have become truly representative of the recent scholarship of American geographers While it focuses on work since 1990 it additionally includes related prior work and work by non American geographers The initial Geography in America was published in 1989 and has become a benchmark reference of American geographical research during the 1980s This latest volume is completely new and features a preface written by the eminent geographer Gilbert White *The Collapse of Globalism Revised Edition* John Ralston Saul,2009-09-22 In 1999 John Ralston Saul began predicting that globalism would collapse In 2005 he laid out this scenario in *The Collapse of Globalism and the Reinvention of the World* Now he has enlarged the book showing how today s crisis came about and suggesting what to do next In this new edition Saul describes the current financial crisis as a mere boil to be lanced The far more serious problem is that the West driven by most of its economists managers consultants and columnists remains stuck on outdated ideas of growth wealth creation and trade expansion They are still trying to limit the debate to a narrow choice between protectionism and free trade and are concentrated on old fashioned stimulation Public policy has been dominated by the people who created this crisis Saul envisions a new sort of wealth creation and growth and in place of reaction advocates new forms of action *Hard Landing* Thomas Petzinger, Jr.,2010-12-01 In this updated paperback edition of a rich readable and authoritative Fortune book Wall Street Journal reporter Petzinger tells the dramatic story of how a dozen men including Robert Crandall of American Airlines Frank Borman of Eastern and Richard Ferris of United battled for control of the world s airlines *Airline Network Planning and Scheduling* Ahmed Abdelghany,Khaled Abdelghany,2018-11-08 A concise resource to the best practices and problem solving ideas for understanding the airline network planning and scheduling process Airline Network Planning and Scheduling offers a comprehensive resource that is filled with the industry s best practices that can help to inform decision modeling and the problem solving process Written by two industry experts the book is designed to be an accessible guide that contains information for addressing complex challenges problems and approaches that arise on the job The chapters begin by addressing the complex topics at a broad conceptual level before moving on to more detailed modeling in later chapters This approach follows the standard airline planning process and reflects the duties of the day to day job of network schedule planners To help gain a practical understanding of the information presented each chapter includes exercises and data based on real world case studies In addition throughout the book there are graphs and illustrations as well as information on the most recent advances in airline network and planning research This important resource Takes a practical approach when detailing airline network planning and scheduling practices as opposed to a theoretical perspective Puts the focus on the complexity and main challenges as well as current practices and approaches to problem solving and decision making Presents the information in a logical sequence that begins with broad conceptual topics and gradually delves into more advanced topics that address modeling

Contains international standard airline planning processes the day to day responsibilities of the job and outlines the steps taken when building an airline network and schedule Includes numerous case studies exercises graphs and illustrations throughout Written for professionals and academics Airline Network Planning and Scheduling offers a resource for understanding best practices and models as well as the challenges involved with network planning and scheduling

Centrality in Strategic Transportation Network Design Anne Lange, 2019-03-01 Efficient and effective transportation networks are backbones to modern societies Methodologically their design has mainly been driven by optimization approaches oftentimes with a strong cost focus Their strategic planning however should go beyond detailed cost analysis and identify other key decision drivers Transportation network centrality describes the appearance of a network hence is crucial for network design Anne Paul develops a strategic approach to transportation network design by conceptualizing transportation network centrality and relating it to the performance and quality of transportation networks Consequently the concept of network centrality serves to support decisions in strategic network design A practical implementation of this approach is provided demonstrating its feasibility Potential readers include scholars and practitioners from logistics supply chain management and operational research with an interest in strategic transportation network design
