Laboratory of Neuroscience Department of Psychiatry Harvard Medical School Boston and Brockton V A Medical Center Brockton Massachusetts The alternation of waking and sleeping the daily course of the advancing and receding tides of consciousness has long been a familiar part of our experience But it is a new idea that autonomic and respiratory physiology are equally and dramatically altered in a parallel fashion and it is this concept that is summarized and developed here The editors have drawn together thematically related chapters written by researchers with direct experience and a high level of expertise in the areas they address The main theme is the relationship of general physiological alterations during sleep to cellular physiology and to the pathology of sleep What is distinctive and especially appealing about this book on sleep is its emphasis on the autonomic and respiratory systems This volume is I believe the first to explore these topics systematically and to blend the nomenclological description with possible cellular mechanisms and ties to clinical pathology As such this book should find an important place in the library of workers in the fields of sleep research autonomic and respiratory physiology and related neuroscience disciplines it also belongs in the library of clinicians concerned with the disorders of

There is no doubt that a major problem of present day research workers especially in the life sciences is the plethora of publications of all kinds abstracts short communications full papers in journals of varying quality reviews and proceedings of symposia with in addition an unprecedented duplication of publications Even for experts working in the field it is almost impossible to keep an up to date view of all current research articles The Western grant and career system encourages scientists to publish as much as possible The editors and publishers of our new series are convinced that the format of *Current Topics in Neuroendocrinology* leads a way out of this confusion Each volume is conceived as a concise up to date textbook on one well defined and currently exciting subject Different from classic textbooks however the speed of publication compares favorably with that of many journals this ensures an immediacy which is impossible in textbooks On the other hand topics to be included in this series are also sufficiently

reliable with enough work being done to treat them from several aspects Each volume will supply four to six chapters treating such a broad topic as neuroendocrinology from several points of view for example anatomic electrophysiologic endocrine and behavioral views Where clinical data are immediately available they will be included No other 360 pages treating the nervous or endocrine systems provides such a coordinated set of chapters on an interesting topic in each volume
