Stratigraphical Palaeontology:

A Manual of Palaeontology... Henry Alleyne Nicholson, Richard Lydekker, 1889 **4th European Meeting on the Palaeontology and Stratigraphy of Latin America** E. Díaz-Martínez, Isabel Rábano, 2007 *Geological Magazine* Henry Woodward, 1927 **Stratigraphy of the British Isles** Dorothy Helen Rayner, 1981-06-04 This is a reprint of the second edition of Dr Rayner's standard text on the stratigraphy and historical geology of the British Isles. The book is written for undergraduates and other readers who may have only a general acquaintance with the broad principles of geology. An introductory chapter reviews the basic principles of stratigraphy, geochronology and tectonics. The various geological systems found in the British Isles are then considered in turn. A valuable feature of the book is the extensive treatment of different regional areas within the discussion of a particular geological system. In the final chapter the author reviews briefly those major economic resources that are related to stratigraphy. Throughout the text care has been taken to introduce the plate tectonic interpretation of stratigraphic features. Much more is known about the neighbouring continental shelf and the geology of sea floors and this also is included in order to provide a comprehensive integrated account of the geological history of the British Isles. Stratigraphic Significance and Petrology of Phosphate Nodules at Base of Niobrara Formation, East Flank of Black Hills, South Dakota Harry Allison Tourtelot, William A. Cobban, William Aubrey Cobban, 1968 Phosphate replaces marlstone in microenvironments formed by mollusks *Micropalaeontology, Sedimentary Environments and Stratigraphy* J. E. Whittaker, M. B. Hart, 2010 Dennis Curry was a remarkable polymath and philanthropist leading a double life as one of the UK's most gifted amateur geologists whilst at the same time being an extremely successful businessman as Managing Director of Currys Ltd. This Festschrift authored by friends and specialists from Britain and France pays tribute to his often seminal research as well as exhibiting the wide range of his geological interest. It contains 12 chapters and covers several differing aspects of micropalaeontology: pteropods, diatoms and especially foraminifera. Strontium Isotope Stratigraphy, Hampshire Basin stratigraphy and palaeogeography as well as major contributions on English Channel sedimentology and the great faunal turnover affecting mammals at the Eocene-Oligocene boundary. A scientific appreciation of Dennis Curry, the professional amateur, with recollections of former colleagues at University College London where he was Visiting Professor together with an assessment of the valuable collections he established and donated to The Natural History Museum are also included. Copiously illustrated, this book is a must for all geologists. **Shorter Contributions to Paleontology and Stratigraphy, 1992** William Jasper Sando, 1993 **Journal of the Royal Society of New Zealand**, *Darwin's Biological Work* P. R. Bell, 2011 This collection of essays demonstrates the width of Darwin's interests and ability as a biologist. The theory of evolution by natural selection was of course his most important achievement and is covered in three of the essays. Wilkie presents Darwin's theory in its historical setting and relates it to the earlier work by Buffon and Lamarck. Haldane discusses the theory of evolution by natural selection as postulated by Darwin and assesses its

validity in the light of subsequent research and Challinor considers the apparent discrepancy between some of the fossil evidence and Darwin's theory a problem which Darwin himself appreciated and discussed in *The Origin of Species*. The other essays deal with subjects about which Darwin wrote separate books. The essay by Bell is concerned with the movement of plants in response to light that by Marler with communication between animals and that by Whitehouse with cross and self fertilization in plants.
