The Government-University Partnership

Scientific research and development (R&D) involved total expenditures of about \$77 billion in the United States in fiscal 1982.¹ The federal government provided about 47 percent of R&D funding and industry about 50 percent.* Although only 10 percent (an estimated \$7 billion) of all U.S. R&D was carried out in universities in 1982, this included about 50 percent (about \$4.6 billion) of the nation's basic research. The federal government is the major source of funds for academic science, supplying about 66 percent of the support for all university R&D and about 70 percent of the support for basic research.³

In this chapter we look at the evolution of the government-university partnership and its characteristics today. From the perspective of the 1980s, it is difficult to recall the attitude toward federal support of academic research that prevailed before World War II or to appreciate the great transformation of our universities that resulted from the massive postwar infusion of federal funds. The war, however, marked a turning point, not a beginning, in government-university relations. The origins of our system of academic science and of government's approach to meeting its needs in science and technology go back to the nation's first years.

*In 1940 the nation's research and development budget was \$345 million. Of this total, \$234 million or 68 percent came from industry, 19 percent from the federal government, 9 percent from colleges and universities, and 4 percent from other sources, including private foundations and endowments.²
