9/11: Mental Health in the Wake of Terrorist Attacks Yuval Neria,Raz Gross,Randall D. Marshall,Ezra S.

Susser,2006-09-14 Does terrorism have a unique and significant emotional and behavioral impact among adults and children In what way does the impact of terrorism exceed the individual level and affect communities and specific professional groups and test different leadership styles How were professional communities of mental health clinicians policy makers and researchers mobilized to respond to the emerging needs post disaster What are the lessons learned from the work conducted after 9 11 and the implications for future disaster mental health work and preparedness efforts Yuval Neria and his team are uniquely placed to answer these questions having been involved in modifying ongoing trials and setting up new ones in New York to address these issues straight after the attacks No psychiatrist mental health professional or policy maker should be without this book **Stress** Robert Kugelmann,1992-09-17 Stress names a kind of grief unique to the modern period a grief perpetually unresolved evoked by the rapid and relentless changes characteristic of modernity Because our grief is always unresolved the passion of mourning is perpetually productive Stress is also a discourse a mutation of experience by the external power of speech a power that can devour what it articulates Yet it was not until World War II when the psychiatric difficulties of pilots and bombers in particular brought stress into the open that stress became a topic of medical and psychological research and a named cause of disorders The term borrows the notions of pressure and tension from the engineering world The seeds of stress are found around 1750 when the notion of luxury changed in meaning from a vice to be avoided to a virtue to be vigorously pursued Before this time human existence differed from ours in such a way that we detect no stress or anything like it The book includes a phenomenology of the experience of stress a history of the construction of engineered grief and an assessment of stress management programs Because such programs seek to make us comfortable with stress they do not move us to bring the work of grieving to a resolution This book will be of interest to post modernists phenomenologists social constructionists hermeneuticists deconstructionists social historians and medical historians **Handbook of Cross-Cultural and Multicultural Personality Assessment** Richard H. Dana,2000-02

Throughout the world as in the United States psychologists are increasingly being called upon to evaluate clients whose backgrounds differ from their own It has long been recognized that standard personality and psychopathology assessment instruments carry cultural biases and in recent years efforts to correct these biases have accelerated The Handbook of Cross Cultural and Multicultural Personality Assessment brings together researchers and practitioners from 12 countries with
