Acoustic Communication in Birds Kroodsma, 1983-05-10 *Acoustic Communication in Birds Volume 2 Song Learning and Its Consequences* investigates acoustic communication in birds with emphasis on song learning and its consequences. Some issues in the study of bird sounds are discussed with particular reference to evolutionary considerations. The ontogeny of acoustic behavior in birds is also considered along with sound production, neural control of song and auditory perception. Comprised of nine chapters, this volume begins with an introduction to the nature, extent and evolution of vocal learning in birds. Several well-documented examples in which vocal development appears to proceed independently of audition and therefore independently of vocal learning are presented together with aspects of selective vocal learning, the timing of vocal learning and selective forces that may have promoted the evolution of vocal learning in birds. Subsequent chapters explore the role of subsong and plastic song in the vocal learning process, the function and evolution of avian vocal mimicry, the ecological and social significance of duetting in birds and microgeographic and macrogeographic variation in the acquired vocalizations of birds. The book also examines genetic population structure and vocal dialects in *Zonotrichia Emberizidae*. This monograph will be of interest to ornithologists, evolutionary biologists and zoologists as well as to students of communication and bioacoustics.

Bernstein's Construction of Movements Mark L. Latash, 2020-10-29 Nikolai Aleksandrovich Bernstein was one of the great neuroscientists of the twentieth century and highly respected by Western scientists even though most have never read his most important book entitled *On the Construction of Movements*. Bernstein's *Construction of Movements: The Original Text and Commentaries* is the first English translation. It supplements the translated text with a series of commentaries by scientists who knew Bernstein personally as well as leaders in related fields including physics, motor control and biomechanics. While written in 1947, Bernstein's book is anything but obsolete, making this English translation and accompanying commentaries an invaluable text. The translated original text presents in detail Bernstein's views on the evolutionary history of biological movement and his multi-level hierarchical scheme of the construction of movements in higher animals including humans. The following commentaries address Bernstein's personality, the history of the book and current views on different aspects of neuroscience covered in Bernstein's text. Ultimately, they present a book within the book to showcase how Bernstein's heritage has developed over the past years. This classic, available for the first time to an English-speaking audience, will prove beneficial to students, instructors and experts of neuroscience, physics, neurophysiology, motor control, motor rehabilitation, biomechanics, dynamical systems and related fields.

The Idea of God and the Reality of Evil R. W. K. Paterson, 2010-12-01 *The Idea of God and the Reality of Evil* is the perfect book for readers who have a broad interest in fundamental religious issues. It offers a balanced, clear and non-technical view of the religious problem of evil, which often forms an insurmountable barrier to faith. For Atheists, the existence of evil is categorical proof that a higher, omnipresent and omnipotent creator cannot exist. This book takes a fresh look at the arguments of the Atheists and

re examines their perspective that a perfect being implies a perfect world and offers a rational answer to the apparent conflict between faith and an imperfect reality Paterson's treatment of the problem of evil is clear He offers readers a balanced look at all the conflicting views in this book which will appeal to Christians Humanists and members of many other faiths

Dynamics of the Sun and Stars Mário J. P. F. G. Monteiro, Rafael A. García, Jørgen Christensen-Dalsgaard, Scott W. McIntosh, 2020-12-18 These are the proceedings of a meeting celebrating Michael Thompson's seminal work on solar and stellar physics as well as his major contributions to the development of the National Center for Atmospheric Research The meeting also marked Michael J Thompson's untimely death in October 2018 Michael played a key role in the development of helioseismology and its application to the study of the structure and dynamics of the solar interior and he provided a strong foundation for the extension of seismic studies for other stars After focusing for several years on more administrative activities he was returning to leading the seismic studies of solar interior rotation and he was deeply involved in the understanding of the dynamics of the core of stars when his life was tragically lost The conference focused on dynamical aspects of the sun and stars based on the large amount of data available on solar and stellar oscillations and the extensive and detailed modelling now becoming feasible Combining observations seismic analysis and modelling the meeting and this book serve as a fitting memorial to a close colleague and friend much missed

Australia's Curriculum Dilemmas Lyn Yates, Cherry Collins, Kate O'Connor, 2011-03-15 Australia's Curriculum Dilemmas tells the story of Australia's recent attempts to come to grips with the big challenges of curriculum and sets up the background to understanding the debates that continue to surface as we move for the first time towards a national approach Detailing some of the inside stories and arguments of the last 30 years about what schools should do as well as some of the politics and lessons that have been learnt along the way it brings together accounts from a national research project and reflections from people who have been actively involved in developing curriculum policies for each state Expert contributors examine the challenges of the public management of curriculum drawing on the different experiences of curriculum reforms in different states They take up the problems of framing vocational and academic education for the new century and of confronting equity and diversity issues They show the fundamental differences that exist in Australia regarding the impact of examinations and assessment and the very different policy approaches that have been taken to tackle these issues Many people in this country are unaware of how much their experience of education has been formed by the particular values of the state in which they were educated For the first time this book demonstrates the effects of those differences now and into the future

ontogeny function and phylogeny *Federal Probation* ,1943 **Social Movements in Taiwan's Democratic Transition**

Yun Fan,2018-09-19 Examining the relationships between activists and the changing political environment this book analyzes the trajectories of three major social movements in Taiwan during the country's democratic transition between 1980 and 2000 In doing so it explores why the labor and environmental movements became less partisan while the women's movement became more so Providing a comparative discussion of these critical social movements this book explores key theoretical questions and presents a rich and comprehensive analysis of social activism during this period of Taiwan's political history It focuses on causal mechanisms and variation and thus avoids the tautological trap of finding an improving political opportunity structure wherever a social movement is flourishing Drawing on extensive data from over 140 activists demographic backgrounds the discussion also builds upon existing studies of the biographical aspects of contention This study then asks further questions about how certain tactics are chosen not only how a repertoire of contention comes to have the shape it does Combining both a theoretical and an empirical approach this book will be useful to students and scholars of Taiwanese politics and society as well as social movements and democracy more generally
