The Adaptive Seascape:

The Adaptive Seascape David J. Merrell, 1994 Based on observational and experimental data in natural populations of plants and animals studied in the field and in the laboratory this perspective unravels the hidden and often poorly founded assumptions underlying some of the more troublesome controversies in evolutionary biology today **Half Life** APAC Press, Geoffrey P Forster, 2010-12-15 What is the lifetime of a corporation This is a critical question for it impacts not only how we make longer term investments in established corporations it also impacts how often we need to restructure an investment portfolio Large established and once successful corporations and their associated brands continually emerge and disappear in any healthy competitive business environment However an important trend is emerging in that the mean life time for large established corporations has more than halved in the last 50 years This observation is of critical importance to business analysts investors executives and corporate directors for it is a core parameter in determining the long term valuation of a business In *Half Life* Forster documents a detailed study of corporate survival trends and examines and extends the existing landscapes tools models and indexes used to monitor the corporate life cycle Forster goes on to describe the creation of a new business fitness landscape model introduces two new business risk parameters creates a new business diversity fitness index and completes a macro analysis of the extinction rates associated with the 100 largest corporations in the United States With these new tools Forster establishes a new model for viewing the mean life and half life of large corporations and for studying the impact that related and unrelated diversification in industry participation has on a corporation s effective lifespan Forster suggests that established corporations don t survive just by being the fittest but that they survive rapid discontinuous change by finding a new optimum position in a new business fitness landscape Seascape Ecology Simon J. Pittman, 2017-12-18 *Seascape Ecology* provides a comprehensive look at the state of the science in the application of landscape ecology to the seas and provides guidance for future research priorities The first book devoted exclusively to this rapidly emerging and increasingly important discipline it is comprised of contributions from researchers at the forefront of seascape ecology working around the world It presents the principles concepts methodology and techniques informing seascape ecology and reports on the latest developments in the application of the approach to marine ecology and management A growing number of marine scientists geographers and marine managers are asking questions about the marine environment that are best addressed with a landscape ecology perspective *Seascape Ecology* represents the first serious effort to fill the gap in the literature on the subject Key topics and features of interest include The origins and history of seascape ecology and various approaches to spatial patterning in the sea The links between seascape patterns and ecological processes with special attention paid to the roles played by seagrasses and salt marshes and animal movements through seascapes Human influences on seascape ecology includes models for assessing human seascape interactions A special epilogue in which three eminent scientists who have been instrumental in shaping the course of landscape ecology

offer their insights and perspectives Seascape Ecology is a must read for researchers and professionals in an array of disciplines including marine biology environmental science geosciences marine and coastal management and environmental protection It is also an excellent supplementary text for university courses in those fields *Darwin's Devices* John Long,2012-04-03 A director of biorobotics research at Vassar College demonstrates how applying principles of natural selection to robot design is revolutionizing ideas in both technology and evolution identifying the potential capabilities of a practice that combines experimental science engineering and natural process 14 000 first printing **Phylogenetic Inference, Selection Theory, and History of Science** Anthony William Fairbank Edwards,2018-07-19 Seminal papers by A W F Edwards published together for the first time with commentaries from leading experts to contextualise his contribution

40 Years of Evolution Peter R. Grant,B. Rosemary Grant,2024-11-12 A new revised edition of Peter and Rosemary Grant's synthesis of their decades of research on Daphne Island *Managing Socio-ecological Production Landscapes and Seascapes for Sustainable Communities in Asia* Osamu Saito,Suneetha M Subramanian,Shizuka Hashimoto,Kazuhiko Takeuchi,2020-02-10 This open access book presents up to date analyses of community based approaches to sustainable resource management of SEPLS socio ecological production landscapes and seascapes in areas where a harmonious relationship between the natural environment and the people who inhabit it is essential to ensure community and environmental well being as well as to build resilience in the ecosystems that support this well being Understanding SEPLS and the forces of change that can weaken their resilience requires the integration of knowledge across a wide range of academic disciplines as well as from indigenous knowledge and experience Moreover given the wide variation in the socio ecological makeup of SEPLS around the globe as well as in their political and economic contexts individual communities will be at the forefront of developing the measures appropriate for their unique circumstances This in turn requires robust communication systems and broad participatory approaches Sustainability science SuS research is highly integrated participatory and solutions driven and as such is well suited to the study of SEPLS Through case studies literature reviews and SuS analyses the book explores various approaches to stakeholder participation policy development and appropriate action for the future of SEPLS It provides communities researchers and decision makers at various levels with new tools and strategies for exploring scenarios and creating future visions for sustainable societies Population Genomics: Marine Organisms Marjorie F. Oleksiak,Om P. Rajora,2019-12-31 Population genomics has provided unprecedented opportunities to unravel the mysteries of marine organisms in the oceans depths The world's oceans which make up 70% of our planet encompass diverse habitats and host numerous unexplored populations and species Population genomics studies of marine organisms are rapidly emerging and have the potential to transform our understanding of marine populations species and ecosystems providing insights into how these organisms are evolving and how they respond to different stimuli and environments This knowledge is critical for understanding the fundamental aspects of marine life how marine organisms will

respond to environmental changes and how we can better protect and preserve marine biodiversity and resources This book brings together leading experts in the field to address critical aspects of fundamental and applied research in marine species and share their research and insights crucial for understanding marine ecosystem diversity and function It also discusses the challenges opportunities and future perspectives of marine population genomics **Ecosystem Restoration through**

Gaston,2012-12-06 This book began life as a review article That article spawned a symposium which was in turn greatly expanded to form the present volume As the project moved through these developmental stages hopefully towards attainment of its full maturity a number of people have provided invaluable assistance to us and we would like to take this opportunity to thank them Gordon Orians must certainly take a high place in that list He has been both a friend and mentor to W E K and many of the topics explored in this book have emerged from the resultant dialogue His thought processes ideas and perhaps even some of his turns of phrase emerge throughout much of the book Gordon also played a pivotal role in inviting in motion and so he has served as a catalyst the article that set this project to the book as well as one of its reagents While he has not served as an editor of this book he is one of its authors in more than just the literal sense **Amphibious**

Concepts at the Edge of the Sea Joerg Baumeister, Ioana C. Giurgiu, Daniela A. Ottmann,2025-02-14 This book explores interfaces between land and sea and their geostrategic ecological urban productive indigenous legal historical and artistic dimensions The oceans comprising two thirds of the earth's surface were initially utilised mainly for transportation and fishing Today they serve diverse purposes such as supplying energy freshwater mineral resources supporting leisure activities and providing habitat Additionally the UN set up the first international agreement establishing Marine Protection Areas for a third of the sea to mitigate the growing use and exploitation The more interest in oceans territories increases the more the question arises about the beneficial evolution of their physical and legal boundaries What innovative amphibious concepts can be developed for the edge of the sea The book pushes the boundaries of current knowledge to provide a deeper insight into the upcoming challenges and opportunities making it easier to apply the best strategies for a healthy future for both the ocean and humanity **Computational Intelligence** Kurosh Madani, Antonio Dourado Correia, Agostinho Rosa, Joaquim Filipe,2012-02-18 The present book includes a set of selected extended papers from the second International Joint Conference on Computational Intelligence IJCCI 2010 held in Valencia Spain from 24 to 26 October 2010 The conference was composed by three co located conferences The International Conference on Fuzzy Computation ICFC the International Conference on Evolutionary Computation ICEC and the International Conference on Neural Computation ICNC Recent progresses in scientific developments and applications in these three areas are reported in this book IJCCI received 236 submissions from 49 countries in all continents After a double blind paper review performed by the Program Committee only 30 submissions were accepted as full papers and thus selected for oral presentation leading to a full paper acceptance ratio of 13% Additional papers were accepted as short papers and posters A further selection was made after the Conference based also on the assessment of presentation quality and audience interest so that this book includes the extended and revised versions of the very best papers of IJCCI 2010 Commitment to high quality standards is a major concern of IJCCI that will be maintained in the next editions considering not only the stringent paper acceptance ratios but also the quality of the program committee keynote lectures participation level and logistics **Biodiversity-Health-Sustainability Nexus in**

Socio-Ecological Production Landscapes and Seascapes (SEPLS) Maiko Nishi, Suneetha M. Subramanian, Himangana Gupta, 2022-06-08 This is an open access book. It is a compilation of case studies that provide useful knowledge and lessons that derive from on the ground activities and contribute to policy recommendations focusing on the interlinkages between biodiversity and multiple dimensions of health e.g. physical, mental and spiritual in managing socio-ecological production landscapes and seascapes. SEPLS This book provides insights on how SEPLS approaches can contribute to more sustainable management of natural resources, achieving global biodiversity and sustainable development goals and good health for all. It is also expected to offer useful knowledge and information for an upcoming three-year thematic assessment of the interlinkages among biodiversity, water, food and health, the so-called nexus assessment by the Intergovernmental Science Policy Platform on Biodiversity and Ecosystem Services (IPBES). The book begins with an introductory chapter followed by eleven case study chapters demonstrating the nexus between biodiversity, health and sustainable development, and then a synthesis chapter clarifying the relevance of the case study findings to policy and academic discussions. It will be of interest to scholars, policymakers and professionals in the field related to sustainable development. **How and Why Species**

Multiply Peter R. Grant, B. Rosemary Grant, 2020-03-31 Charles Darwin's experiences in the Galapagos Islands in 1835 helped to guide his thoughts toward a revolutionary theory that species were not fixed but diversified from their ancestors over many generations and that the driving mechanism of evolutionary change was natural selection. In this concise, accessible book, Peter and Rosemary Grant explain what we have learned about the origin and evolution of new species through the study of the finches made famous by that great scientist, Darwin's finches. Drawing upon their unique observations of finch evolution over a thirty-four-year period, the Grants trace the evolutionary history of fourteen different species from a shared ancestor three million years ago. They show how repeated cycles of speciation involved adaptive change through natural selection on beak size and shape and divergence in songs. They explain other factors that drive finch evolution, including geographical isolation, which has kept the Galapagos relatively free of competitors and predators, climate change, and an increase in the number of islands over the last three million years, which enhanced opportunities for speciation and flexibility in the early learning of feeding skills, which helped species to exploit new food resources. Throughout, the Grants show how the laboratory tools of developmental biology and molecular genetics can be combined with observations and experiments on birds in the field to gain deeper insights into why the world is so biologically rich and diverse. Written by two preeminent evolutionary biologists, *How and Why Species Multiply* helps to answer fundamental questions about evolution in the Galapagos and throughout the world. **Cancer Systems Biology** Ravi Salgia, Mohit Kumar Jolly, Prakash Kulkarni, Govindan Rangarajan, 2025-09-04 Over the centuries, civilization has seen considerable advances in healthcare. Cancer is among the most challenging healthcare issues that we face today, but a number of discoveries have led to better care. Despite all the progress and the promise regarding early detection and precision medicine, we are still faced

with the nettlesome problem cancer is a moving target Even within an individual tumour deep sequencing analyses now indicate multiple phenotypically distinct subpopulations whose representation seems to vary dramatically from one stage to the next as the tumour progresses Cancer Systems Biology provides state of the art reviews and thought provoking ideas in a concise and succinct manner This insightful textbook is a crosspollination of concepts from multiple disciplines and experimental approaches to study cancer The chapters provide new ideas and thoughts outlining how a quantitative picture of cancer can provide a deeper understanding of the disease and how a systems level perspective may hold the key to fully comprehend how cancer arises and progresses Written by experts in multiple disciplines including systems biologists science researchers physicists mathematicians and clinicians Cancer Systems Biology provides a comprehensive up to date treatise devoted to understanding cancer from a systems perspective Providing new conceptual insights that can aid precision medicine it will be essential reading for academic researchers in the field clinicians graduate students and scientists with an interest in cancer biology

Offshore Energy and Marine Spatial Planning Katherine L. Yates, Corey J. A. Bradshaw, 2018-03-29 The generation of offshore energy is a rapidly growing sector competing for space in an already busy seascape This book brings together the ecological economic and social implications of the spatial conflict this growth entails Covering all energy generation types wind wave tidal oil and gas it explores the direct and indirect impacts the growth of offshore energy generation has on both the marine environment and the existing uses of marine space Chapters explore main issues associated with offshore energy such as the displacement of existing activities and the negative impacts it can have on marine species and ecosystems Chapters also discuss how the growth of offshore energy generation presents new opportunities for collaboration and co location with other sectors for example the co location of wild capture fisheries and wind farms The book integrates these issues and opportunities and demonstrates the importance of holistic marine spatial planning for optimising the location of offshore energy generation sites It highlights the importance of stakeholder engagement in these planning processes and the role of integrated governance with illustrative case studies from the United States United Kingdom northern Europe and the Mediterranean It also discusses trade off analysis and decision theory and provides a range of tools and best practices to inform future planning processes
