The Admissible Dual Of GL_n Via Compact Open Subgroups Am 129:

Representations of Reductive p-adic Groups Anne-Marie Aubert, Manish Mishra, Alan Roche, Steven

Spallone, 2019-04-16 This book consists of survey articles and original research papers in the representation theory of reductive p-adic groups. In particular it includes a survey by Anne Marie Aubert on the enormously influential local Langlands conjectures. The survey gives a precise and accessible formulation of many aspects of the conjectures highlighting recent refinements due to the author and her collaborators and their current status. It also features an extensive account by Colin Bushnell of his work with Henniart on the fine structure of the local Langlands correspondence for general linear groups beginning with a clear overview of Bushnell Kutzko's construction of cuspidal types for such groups. The remaining papers touch on a range of topics in this active area of modern mathematics: group actions on root data, explicit character formulas, classification of discrete series representations, unicity of types, local converse theorems, completions of Hecke algebras, p-adic symmetric spaces. All meet a high level of exposition. The book should be a valuable resource to graduate students and experienced researchers alike.

To an Effective Local Langlands Correspondence Colin J. Bushnell, Guy

Henniart, 2014-08-12 Let F be a non Archimedean local field. Let W_F be the Weil group of F and P_F the wild inertia subgroup of W_F . Let $\widehat{W_F}$ be the set of equivalence classes of irreducible smooth representations of W_F . Let $A_0^n(F)$ denote the set of equivalence classes of irreducible cuspidal representations of $GL_n(F)$ and set $\widehat{GL_n(F)} = \bigsqcup_{n \geq 1} A_0^n(F)$. If $\sigma \in \widehat{W_F}$ let $L(\sigma) \in \widehat{GL_n(F)}$ be the cuspidal representation matched with σ by the Langlands Correspondence. If σ is totally wildly ramified in that its restriction to P_F is irreducible the authors treat $L(\sigma)$ as known. From that starting point the authors construct an explicit bijection $N(\widehat{W_F}) \rightarrow \widehat{GL_n(F)}$ sending σ to $N(\sigma)$. The authors compare this naive correspondence with the Langlands correspondence and so achieve an effective description of the latter modulo the totally wildly ramified case. A key tool is a novel operation of internal twisting of a suitable representation π of W_F or $GL_n(F)$ by tame characters of a tamely ramified field extension of F canonically associated to π . The authors show this operation is preserved by the Langlands correspondence.

Representation Theory and Analysis on Homogeneous Spaces Semen Grigor'evich

Gindikin, 1994 A combination of new results and surveys of recent work on representation theory and the harmonic analysis of real and p-adic groups. Among the topics are nilpotent homogeneous spaces, multiplicity formulas for induced representations and new methods for constructing unitary representations of real reductive groups. The 12 papers are from a conference at Rutgers University, February 1993. No index. Annotation copyright by Book News Inc, Portland, OR. **Annales Scientifiques de L'École Normale Supérieure** École normale supérieure (France), 2012 **The Admissible Dual of $GL(N)$ Via Compact Open Subgroups** Colin John Bushnell, Philip C. Kutzko, 1993 This work gives a full description of a

method for analyzing the admissible complex representations of the general linear group $GL(N, F)$ of a non Archimedean local field F in terms of the structure of these representations when they are restricted to certain compact open subgroups of G . The authors define a family of representations of these compact open subgroups which they call simple types. The first example of a simple type, the trivial type, is the trivial character of an Iwahori subgroup of G . The irreducible representations of G containing the trivial simple type are classified by the simple modules over a classical affine Hecke algebra. Via an isomorphism of Hecke algebras, this classification is transferred to the irreducible representations of G containing a given simple type. This leads to a complete classification of the irreducible smooth representations of G , including an explicit description of the supercuspidal representations as induced representations. A special feature of this work is its virtually complete reliance on algebraic methods of a ring theoretic kind. A full and accessible account of these methods is given here.

As recognized, adventure as with ease as experience about lesson, amusement, as with ease as concurrence can be gotten by just checking out a book **The Admissible Dual Of Gln Via Compact Open Subgroups Am 129** after that it is not directly done, you could admit even more regarding this life, roughly the world.
