The Dynamics on Innovation Adoption in U.S. Municipalities Woosong Jeong, 2013 Research on government innovation has focused on identifying factors that contribute to higher levels of innovation adoption. Even though various factors have been tested as contributors to high levels of innovation adoption, the independent variables have been predominantly contextual and community characteristics. Previous empirical studies shed little light on chief executive officers' (CEOs) attitudes, values, and behavior. Results have also varied with the type of innovation examined. This research examined the effect of CEOs' attitudes and behaviors and institutional motivations on the adoption of sustainability practices in their municipalities. First, this study explored the relationship between the adoption level of sustainability practices in local government and CEOs' entrepreneurial attitudes, i.e., risk taking, proactiveness, and innovativeness, and discovery skills, i.e., associating, questioning, experimenting, observing, and networking, that have not been examined in prior research on local government innovation. Second, the study explored the impact of organizational intention to change and isomorphic pressures, i.e., coercive, mimetic, and normative pressures, and the availability and limit of organizational resources on the early adoption of innovations in local governments. Third, the study examines how CEOs' entrepreneurial attitudes and discovery skills and institutional motivations account for high and low sustaining levels of innovation over time by tracking how much their governments have adopted innovations from the past to the present. Lastly, this study explores their path effects. CEOs' entrepreneurial attitudes, discovery skills, and isomorphic pressures on sustainability innovation adoption. This is an empirical study that draws on a survey research of 134 CEOs who have influence over innovation adoption in their local governments. For collecting data, the study identified 264 municipalities over 10,000 in population that have responded to four surveys on innovative practices conducted by the International City County Management Association (ICMA) in past eight years: the Reinventing local government survey (2003), the government survey (2004), Strategic practice (2006), and the Sustainability survey (2010). This study combined the information about the adoption of innovations from four surveys with CEOs' responses in the current survey. Socio-economic data and information about variations in form of government were also included in the data set. This study sheds light on the discovery skills and institutional isomorphic pressures that influence the adoption of different types of innovations in local governments. This research contributes to a better understanding of the role of administrative leadership and organizational isomorphism in the dynamic of innovation adoption, which could lead to improvements in change management of organizations.
