Professor of Economics The University of Chicago *Keynes on Monetary Policy, Finance and Uncertainty* Jorg Bibow, 2013-03-01 This book provides a reassessment of Keynes theory of liquidity preference It argues that the failure of the Keynesian revolution to be made in either theory or practice owes importantly to the fact that the role of liquidity preference theory as a pivotal element in Keynes General Theory has remained underexplored and indeed widely misunderstood even among Keynes followers and until today The book elaborates on and extends Keynes conceptual framework moving it from the closed economy to the global economy context and applies liquidity preference theory to current events and prominent hypotheses in global finance J rg Bibow presents Keynes liquidity preference theory as a distinctive and highly relevant approach to monetary theory offering a conceptual framework of general applicability for explaining the role and functioning of the financial system He argues that in a dynamic context liquidity preference theory may best be understood as a theory of financial intermediation Through applications to current events and prominent hypotheses in global finance this book underlines the richness continued relevance and superiority of Keynes theory of liquidity preference with Hyman Minsky standing out for developing Keynes vision of financial capitalism

Stochastic Calculus and Differential Equations for Physics and Finance Joseph L. McCauley, 2013-02-21 Stochastic calculus provides a powerful description of a specific class of stochastic processes in physics and finance However many econophysicists struggle to understand it This book presents the subject simply and systematically giving graduate students and practitioners a better understanding and enabling them to apply the methods in practice The book develops Ito calculus and Fokker Planck equations as parallel approaches to stochastic processes using those methods in a unified way The focus is on nonstationary processes and statistical ensembles are emphasized in time series analysis Stochastic calculus is developed using general martingales Scaling and fat tails are presented via diffusive models Fractional Brownian motion is thoroughly analyzed and contrasted with Ito processes The Chapman Kolmogorov and Fokker Planck equations are shown in theory and by example to be more general than a Markov process The book also presents new ideas in financial economics and a critical survey of econometrics **George Soros** Peter L.
