Stress Research Issues For The Eighties:

Stress Research Cary L. Cooper, 1983 EBOOK: Stress Dean Bartlett, 1998-11-16 What is psychological stress How does it influence health How can the experiential components of the stress process be examined Despite both the recent flourishing of the health psychology field and the long history of stress research there have been relatively few attempts to examine stress within a broader framework focusing on the role of psychosocial processes in physical and psychological well being This is what Dean Bartlett's accessible and authoritative book aims to achieve In the earlier chapters of the book the nature of both stress and health is outlined and theoretical perspectives that may have a bearing on how stress can cause illness are considered The author takes as his starting point the assertion that it is the phenomenological experience of stress that determines the impact of stressful events upon the individual and he makes a distinctive contribution in terms of an integrated account of the cognitive phenomenological elements of the stress process Stress offers a comprehensive overview of the stress phenomenon from a biopsychosocial perspective It will be invaluable to students of health psychology and also to professionals including those in the fields of medicine occupational psychology and the health professions *Handbook of Research on Coping Mechanisms for First-Year Students Transitioning to Higher Education* Aloka, Peter, Mukuna, Kananga Robert, 2023-02-20 Transitioning from secondary to higher education is not a natural step for many first year students in higher education institutions There is a considerable difference between being a student at school and university and previous research has highlighted the difficulties faced by first year university students during their transition phase Higher education institutions and their departments acknowledge the challenges faced by new students and they differ in their approach to coping with the issue each seeks to find the most effective solution for its students To reduce the withdrawal rate during the first year of college higher education providers are expected to apply transition programs to help students transition The *Handbook of Research on Coping Mechanisms for First Year Students Transitioning to Higher Education* presents a comprehensive account of the dynamics in higher education institutions and culture shock for new students and analyzes models and theories of adjustment of new students in higher education institutions Covering key topics such as gender institutional support and success factors this reference work is ideal for administrators higher education professionals researchers scholars academicians practitioners instructors and students *Cognitive and Neuropsychological Approaches to Mental Imagery* M. Denis, Johannes Engelkamp, John T.E. Richardson, 2012-12-06 The locus of concreteness effects in memory for verbal materials has been described here in terms of the processing of shared and distinctive information This theoretical view is consistent with a variety of findings previously taken as support for dual coding insofar as both verbal and perceptual information may be involved in comprehending high imagery sentences and in learning lists of concrete words But going beyond previous accounts of imagery this view also can provide explanations for several findings that appear contradictory to the thesis that concrete and abstract materials differ in the form of their storage

in long term memory Although this does not rule out a role for imagery in list learning or text comprehension it is clear that the complex processes involved in comprehension and memory for language go beyond mechanisms supplied by a theory based on the availability of modality specific mental representations The task now is to determine the viability of the theory in other domains Several domains of imagery research presented at EWIC provided fertile ground for evaluating my theoretical viewpoint Although not all provide a basis for distinguishing representational theories of imagery from the imagery as process view there are data in several areas that are more consistent with the latter than the former In other cases there are at least potential sources of evidence that would allow such a distinction
