The Acquisition Of Strategic Knowledge:

    The Acquisition of Strategic Knowledge Thomas R. Gruber,2013-07-10 The Acquisition of Strategic Knowledge deals with the automation of the acquisition of strategic knowledge and describes a knowledge acquisition program called ASK which elicits strategic knowledge from domain experts and puts it in operational form This book explores the dynamics of intelligent systems and how the components of knowledge systems including a human expert interact to produce intelligence Emphasis is placed on how to represent knowledge that experts require to make decisions about actions The move toward abstract tasks and how tasks are solved are discussed along with their implications for knowledge acquisition particularly the acquisition of expert strategies This book is comprised of eight chapters and begins with an overview of the knowledge acquisition problem for strategic knowledge as well as the relevance of strategic knowledge to artificial intelligence The next chapter describes a dialog session between the ASK knowledge acquisition assistant and the user the expert The discussion then turns to software architecture with which to represent strategic knowledge design and implementation of an assistant for acquiring strategic knowledge and approaches to knowledge acquisition Two applications of the ASK system are considered to evaluate the usability of the elicitation technique with real users and to test the adequacy of the strategy rule representation upon which the approach is dependent The scope of ASK its sources of power and its underlying assumptions are also outlined This monograph will be a valuable resource for knowledge systems designers and those interested in artificial intelligence and expert systems   *A Framework for the Representation, Acquisition and Manipulation of Strategic Knowledge for Knowledge Based Systems* Khaled W. al- Dhaher,1992 The representation method strategy schemata possesses features that are similar to several other representation methodologies It captures inter strategy knowledge such as structural and inheritance relationships that are useful in the acquisition and refinement processes outlined by the paradigm The nature of these schemata coupled with the reasoning methods explicitly associated with them differentiate them from other representation and associated reasoning methodologies   **Framework, Methods and Tools for Acquiring and Sharing Strategic Knowledge of the Competitive Environment** Katja Rajaniemi,Tom Wingren,2005

    Knowledge Acquisition: Selected Research and Commentary Sandra Marcus,2012-12-06 What follows is a sampler of work in knowledge acquisition It comprises three technical papers and six guest editorials The technical papers give an in depth look at some of the important issues and current approaches in knowledge acquisition The editorials were pro duced by authors who were basically invited to sound off I ve tried to group and order the contributions somewhat coherently The following annotations emphasize the connections among the separate pieces Buchanan s editorial starts on the theme of Can machine learning offer anything to expert systems He emphasizes the practical goals of knowledge acquisition and the challenge of aiming for them Lenat s editorial briefly describes experience in the development of CYC that straddles both fields He outlines a two phase development that relies on an engineering approach early on and aims for a crossover to more

automated techniques as the size of the knowledge base increases Bareiss Porter and Murray give the first technical paper It comes from a laboratory of machine learning researchers who have taken an interest in supporting the development of knowledge bases with an emphasis on how development changes with the growth of the knowledge base The paper describes two systems The first Protos adjusts the training it expects and the assistance it provides as its knowledge grows The second KI is a system that helps integrate knowledge into an already very large knowledge base   Mapping Strategic Knowledge Anne Sigismund Huff,Mark Jenkins,2002-01-31 This book outlines a number of different tools for mapping strategic knowledge and thus making knowledge more accessible Anne Sigismund Huff and Mark Jenkins have brought leading academics together in this work to provide informed analysis and theory to illustrate the contribution of knowledge mapping to central issues in strategy and organization theory to consider the contribution of these studies to management practice to address practical theoretic and methodological limitations of these tools including several software tools now available to facilitate mapping Each section of the book provides a table which charts the chapters main contents key findings and implications for knowledge management An annotated bibliography is provided at the end of the book as a resource for readers who may wish to become more familiar with relevant and existing literature in this area Mapping Strategic Knowledge is relevant to those interested in knowledge management primarily academics and consultants in the area of strategic management but also academics in the area of organization theory   **Strategic Capabilities and Knowledge Transfer Within and Between Organizations** Arturo Capasso,Giovanni Battista Dagnino,Andrea Lanza,2005-01-01 A remarkably insightful collection of contributions combining the strategy capability and the knowledge creation and sharing perspectives Very useful reading for the serious scholar Yves L Doz INSEAD France This volume is the imaginative outcome of several international strategy scholars who have cultivated original research on the broad relationship between strategic capabilities and knowledge transfer at both intra and inter organizational levels   Automated Knowledge Acquisition for Strategic Knowledge Stanford University. Agile Development of Diagnostic Knowledge Systems Joachim Baumeister,2004 The success of diagnostic knowledge systems has been proved over the last decades Nowadays intelligent systems are embedded in machines within various domains or are used in interaction with a user for solving problems However the development of a knowledge system is still a critical issue Similarly to projects dealing with customized software at a highly innovative level a precise specification often cannot be given in advance Moreover necessary requirements of the knowledge system can be defined not until the project has been started or are changing during the development phase This thesis motivates that classical document centered approaches cannot be applied in such a setting We introduce an agile process model for developing diagnostic knowledge systems mainly inspired by the ideas of the eXtreme Programming methodology known in software engineering The engineering process is supported at a primary level by the introduction of knowledge containers that define an organized view of knowledge contained in the system The actual knowledge is acquired and formalized right from start and the integration to runnable knowledge systems is done continuously in order to allow for an early and concrete feedback The validity and maintainability of the collected knowledge is ensured by appropriate test methods and restructuring techniques respectively Additionally we propose learning methods to support the knowledge acquisition process sufficiently The process model and its activities are evaluated in two real life applications in a medical and in an environmental project the benefits of the agile development are clearly demonstrated **Strategic Management in the Knowledge Economy** Marius Leibold,Gilbert J.
