Statistical Methods in Longitudinal Research Alexander von Eye, 2014-06-28 These edited volumes present new statistical methods in a way that bridges the gap between theoretical and applied statistics The volumes cover general problems and issues and more specific topics concerning the structuring of change the analysis of time series and the analysis of categorical longitudinal data The book targets students of development and change in a variety of fields psychology sociology anthropology education medicine psychiatry economics behavioural sciences developmental psychology ecology plant physiology and biometry with basic training in statistics and computing

**Regenerative Stochastic Simulation** Gerald S. Shedler, 1992-12-17 Simulation is a controlled statistical sampling technique that can be used to study complex stochastic systems when analytic and or numerical techniques do not suffice The focus of this book is on simulations of discrete event stochastic systems namely simulations in which stochastic state transitions occur only at an increasing sequence of random times The discussion emphasizes simulations on a finite or countably infinite state space Develops probabilistic methods for simulation of discrete event stochastic systems Emphasizes stochastic modeling and estimation procedures based on limit theorems for regenerative stochastic processes Includes engineering applications of discrete even simulation to computer communication manufacturing and transportation systems Focuses on simulations with an underlying stochastic process that can specified as a generalized semi Markov process Unique approach to simulation with heavy emphasis on stochastic modeling Includes engineering applications for computer communication manufacturing and transportation systems

Sample Size Methodology M. M. Desu, 2012-12-02 One of the most important problems in designing an experiment or a survey is sample size determination and this book presents the currently available methodology It includes both random sampling from standard probability distributions and from finite populations Also discussed is sample size determination for estimating parameters in a Bayesian setting by considering the posterior distribution of the parameter and specifying the necessary requirements The determination of the sample size is considered for ranking and selection problems as well as for the design of clinical trials Appropriate techniques for attacking the general question of sample size determination in problems of estimation tests of hypotheses selection and clinical trial design are all presented and will help the reader in formulating an appropriate problem of sample size and in obtaining the solution The book can be used as a text in a senior level or a graduate course on sample size methodology Annotated list of tables in appendix Supplemental problems at the end of book

**Identification, Equivalent Models, and Computer Algebra** Paul A. Bekker, Arjen Merckens, Tom J. Wansbeek, 2014-05-10 Identification Equivalent Models and Computer Algebra provides information pertinent to computer algebra This book presents a brief discussion of the commutation matrix an operator that plays a role when derivatives have to be evaluated involving symmetric matrices Organized into eight chapters this book begins with an overview of the link between identification of a parameter and the existence of a consistent estimator and the link between identification of a

model and the rank of a Jacobian matrix This text then describes an algorithm for the determination of the exact rank of a parametrized matrix Other chapters consider the identification in the simultaneous equation model This book discusses as well the identification assessment in confirmatory factor analysis a problem related to the simultaneous equations model The final chapter deals with various computer programs that the enclosed diskette contains This book is a valuable resource for readers who are interested in computer algebra

**Optimization Techniques in Statistics** Jagdish S. Rustagi, 2014-05-19  
Statistics help guide us to optimal decisions under uncertainty A large variety of statistical problems are essentially solutions to optimization problems The mathematical techniques of optimization are fundamental to statistical theory and practice In this book Jagdish Rustagi provides full spectrum coverage of these methods ranging from classical optimization and Lagrange multipliers to numerical techniques using gradients or direct search to linear nonlinear and dynamic programming using the Kuhn Tucker conditions or the Pontryagin maximal principle Variational methods and optimization in function spaces are also discussed as are stochastic optimization in simulation including annealing methods The text features numerous applications including Finding maximum likelihood estimates Markov decision processes Programming methods used to optimize monitoring of patients in hospitals Derivation of the Neyman Pearson lemma The search for optimal designs Simulation of a steel mill Suitable as both a reference and a text this book will be of interest to advanced undergraduate or beginning graduate students in statistics operations research management and engineering sciences and related fields Most of the material can be covered in one semester by students with a basic background in probability and statistics Covers optimization from traditional methods to recent developments such as Karmarkars algorithm and simulated annealing Develops a wide range of statistical techniques in the unified context of optimization Discusses applications such as optimizing monitoring of patients and simulating steel mill operations Treats numerical methods and applications Includes exercises and references for each chapter Covers topics such as linear nonlinear and dynamic programming variational methods and stochastic optimization
