Archaeologies of the Greek Past Susan E. Alcock, 2002-08-15 Social memory the shared remembrances of group

experience creates shared identity and provides people with both an image of their past and a design for their future But how are we to conceive the memories of past peoples such as for example the ancient Greeks This 2002 book makes a strong case for the use of archaeology particularly the evidence of landscape and of monuments to trace patterns in commemoration and forgetfulness Three detailed case studies early Roman Greece Hellenistic and Roman Crete and Messenia in Archaic to Hellenistic times focus on societies undergoing different types of social transformation Material evidence allows us to observe how groups responded to these challenges and how they made different uses of the past in the past **The**

Spatial analysis and social spaces Eleftheria Paliou, Undine Lieberwirth, Silvia Polla, 2014-04-01 In the past decade a range of formal spatial analysis methods has been developed for the study of human engagement experience and socialisation within the built environment Many although not all of these emanate from the fields of architectural and urban studies and draw upon social theories of space that lay emphasis on the role of visibility movement and accessibility in the built environment These approaches are now gaining in popularity among researchers of prehistoric and historic built spaces and are given increasingly more weight in the interpretation of past urban environments *Spatial Analysis and Social Spaces* brings together contributions from specialists in archaeology social theory and urban planning who explore the theoretical and methodological frameworks associated with the application of new and established spatial analysis methods in past built environments The focus is mainly on more recent computer based approaches and on techniques such as access analysis visibility graph analysis isovist analysis agent based models of pedestrian movement and 3D visibility approaches The contributors to this volume examine the relationship between space and social life from many different perspectives and provide illuminating examples from the archaeology of Greece Italy and Cyprus in which intra site analysis offers valuable insights into the built spaces and societies under study *The Making of the Middle Sea* Cyprian Broodbank, 2024-11-19 An award winning history of the Mediterranean from prehistory to the Classical world reissued with an extended new preface by the author For millennia the Mediterranean has been one of the global cockpits of human endeavor World class interpretations exist of its classical and subsequent history but there has been

remarkably little holistic exploration of how its societies culture and economies first came into being despite the fact that almost all the fundamental developments originated well before 500 BCE *The Making of the Middle Sea* offers a full interpretive exploration into the rise of the Mediterranean world from its beginning before the emergence of our own species up to the threshold of classical times Extensively illustrated and ranging across disciplines subject matter and chronology from early humans and the origins of farming and metallurgy to the rise of civilizations Egyptian Levantine Hispanic Minoan Mycenaean Phoenician Etruscan early Greek the book is a masterpiece of archaeological and historical writing Now featuring a new preface exploring the most recent archaeological research on the Mediterranean world Winner of the Wolfson Prize for History in 2014 *The Lives of Prehistoric Monuments in Iron Age, Roman and Medieval Europe* Marta

Díaz-Guardamino, Leonardo García Sanjuán, David Wheatley, 2015 The essays in this collection examine the life histories of carefully chosen megalithic monuments stelae and statue menhirs and rock art sites of various European and Mediterranean regions during the Iron Age and Roman and Medieval times By focusing on the concrete interaction between people monuments and places the volume offers an innovative outlook on a variety of debated issues Prominent among these is the role of ancient remains in the creation institutionalization contestation and negotiation of social identities and memories as well as their relationship with political economy in early historic European societies [The Oxford Handbook of the Bronze Age Aegean](#) Eric H. Cline, 2010-07 The Oxford Handbook of the Bronze Age Aegean provides a comprehensive overview of

our current understanding of the Bronze Age Aegean ca 3000 1000 BC and describes the most important debates and discussions within the discipline Presented in four separate sections within the Handbook the sixty six commissioned articles cover topics ranging from chronological and geographical to thematic to site specific The volume will be indispensable for scholars and advanced students alike **Encyclopedia of Greece and the Hellenic Tradition** Graham Speake, 2021-01-31 Hellenism is the living culture of the Greek speaking peoples and has a continuing history of more than 3 500 years The Encyclopedia of Greece and the Hellenic Tradition contains approximately 900 entries devoted to people places periods events and themes examining every aspect of that culture from the Bronze Age to the present day The focus throughout is on the Greeks themselves and the continuities within their own cultural tradition Language and religion are perhaps the most obvious vehicles of continuity but there have been many others law taxation gardens music magic education shipping and countless other elements have all played their part in maintaining this unique culture Today Greek arts have blossomed again Greece has taken its place in the European Union Greeks control a substantial proportion of the world's merchant marine and Greek communities in the United States Australia and South Africa have carried the Hellenic tradition throughout the world This is the first reference work to embrace all aspects of that tradition in every period of its existence [The Dams and Water Management Systems of Minoan Pseira](#) Philip P. Betancourt, 2012-12-31 Excavations at the Bronze Age seaport on Pseira Island uncovered the remains of sophisticated water retention systems that included the addition of retaining walls to

prevent erosion massive dams with associated reservoirs and small check dams to ravines that reached over one hundred meters in length in order to control water runoff and make it available for human use Agriculture was one of the cornerstones of the Bronze Age Cretan economy and it is no surprise that the ancient inhabitants of the island went to great lengths to control water runoff and make it available for human use Despite the application of traditional archaeological survey methods the full extent of the water management systems was not understood fully as the island's rugged topography prevented intensive and thorough survey of many places The use of a differential Global Positioning System dGPS unit provided the opportunity to take a fresh look at the evidence for water management on the island The results of this study contribute substantial amounts of new information on the little known subject of Minoan water conservation and control
