The Evolutionary Process A Critical Study Of Evolutionary Theory

Christian G. Meyer

The Evolutionary Process A Critical Study Of Evolutionary Theory:

The Evolutionary Process Verne Grant,1991 **The Evolutionary Process** Verne Grant,1985-01-01 An examination of the processes that produce evolutionary change includes discussions of speciation natural selection and acquired characters **The Structure of Evolutionary Theory** Stephen Jay Gould,2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century **Evolutionism and Its Critics** Stephen K. Sanderson,2015-12-03 Evolutionism and Its Critics is a critical history of evolutionary theories in the social sciences and a defense of them against their many critics Sanderson deconstructs not only the wide array of social evolutionary theories but the criticisms of the antievolutionists Deconstructing evolutionary theories means laying bare their fundamental epistemological methodological conceptual and theoretical assumptions and principles Deconstructing antievolutionism means showing just where and how the critics have for the most part gone wrong But Evolutionism and Its Critics aims to reconstruct as well as deconstruct and does this by building on the shoulders of past giants of evolutionary theorizing a comprehensive evolutionary interpretation of human society based on abundant scientific and historical evidence

Ecological-Evolutionary Theory Gerhard Lenski,2015-11-17 For forty years in a variety of books and articles Gerhard Lenski has become the most influential proponent of ecological and evolutionary explanations of human societies their development and transformations from the Stone Age to the present In his newest book Lenski offers a succinct but comprehensive statement of the full body of his theory followed by demonstration of how it can be used to generate new and valuable insights when applied to a set of highly diverse issues These include debates concerning the origin of ancient Israel and its distinctive culture the rise of the West in the modern era the highly varied trajectories of development of Third World

nations in recent decades and the failure of Marxist efforts to transform society in the Soviet Union and elsewhere In the concluding chapter Lenski discusses a number of other issues and areas where ecological evolutionary theory may be fruitfully applied in the future *Literary Criticism for New Testament Critics* Norman R. Petersen,2008-09-25 Utilizing Mark and Luke Acts as case studies Norman Petersen moves beyond redaction criticism to show both the necessity and the possibility for literary criticism to be an integral part of the historical critical study of biblical writings **Evolutionary**

Biology: Contemporary and Historical Reflections Upon Core Theory Thomas E. Dickins,Benjamin J.A. Dickins,2023-03-08 This book is reflecting upon core theories in evolutionary biology in a historical as well as contemporary context It exposes the main areas of interest for discussion but more importantly draws together hypotheses and future research directions The Modern Synthesis MS sometimes referred to as Standard Evolutionary Theory SET in evolutionary biology has been well documented and discussed but was also critically scrutinized over the last decade Researchers from diverse disciplinary backgrounds have claimed that there is a need for an extension to that theory and have called for an Extended Evolutionary Synthesis EES The book starts with an introductory chapter that summarizes the main points of the EES claim and indicates where those points receive treatment later in the book This introduction to the subjects can either serve as an initiation for readers new to the debate or as a guide for those looking to pursue particular lines of enquiry The following chapters are organized around historical perspectives theoretical and philosophical approaches and the use of specific biological models to inspect core ideas Both empirical and theoretical contributions have been included The majority of chapters are addressing various aspects of the EES position and reflecting upon the MS Some of the chapters take historical perspectives analyzing various details of the MS and EES claims Others offer theoretical and philosophical analyses of the debate or take contemporary findings in biology and discuss those findings and their possible theoretical interpretations All of the chapters draw upon actual biology to make their points This book is written by practicing biologists and behavioral biologists historians and philosophers many of them working in interdisciplinary fields It is a valuable resource for historians and philosophers of biology as well as for biologists Chapters 8 20 22 and 33 are available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com) **Evolutionary Theory** Niles Eldredge,Telmo Pievani,Emanuele Serrelli,Ilya Tëmkin,2016-09-23 The natural world is infinitely complex and hierarchically structured with smaller units forming the components of progressively larger systems molecules make up cells cells comprise tissues and organs that are in turn parts of individual organisms which are united into populations and integrated into yet more encompassing ecosystems In the face of such awe inspiring complexity there is a need for a comprehensive non reductionist evolutionary theory Having emerged at the crossroads of paleobiology genetics and developmental biology the hierarchical approach to evolution provides a unifying perspective on the natural world and offers an operational framework for scientists seeking to understand the way complex biological systems work and evolve Coedited by one of the founders of

hierarchy theory and featuring a diverse and renowned group of contributors this volume provides an integrated comprehensive cutting edge introduction to the hierarchy theory of evolution From sweeping historical reviews to philosophical pieces theoretical essays and strictly empirical chapters it reveals hierarchy theory as a vibrant field of scientific enterprise that holds promise for unification across the life sciences and offers new venues of empirical and theoretical research Stretching from molecules to the biosphere hierarchy theory aims to provide an all encompassing understanding of evolution and with this first collection devoted entirely to the concept will help make transparent the fundamental patterns that propel living systems

Environmental Sciences K J Gregory,Ian Simmons,Anthony Brazel,John W Day,Edward A Keller,Alejandro Yanez-Arancibia,Arthur G Sylvester,2008-11-18 Unique in the reference literature this Companion provides students with an introduction to all the major concepts and contemporary issues in the environmental sciences The text is divided into six sections Environmental Sciences Environments Paradigms and Concepts Processes and Dynamic Scales and Techniques Environmental Issues with over 200 entries alphabetically organized and authored by key names in the environmental science disciplines Entries are concise informative richly visual and fully referenced and cross referenced They introduce key concepts and processes that are included in the index cite relevant websites and reflect the latest thinking

Information and Meaning in Evolutionary Processes William F. Harms,2004-04-26 This book is intended to help transform epistemology the traditional study of knowledge into a rigorous discipline by removing conceptual roadblocks and developing formal tools required for a fully naturalized epistemology The evolutionary approach which Harms favours begins with the common observation that if our senses and reasoning were not reliable then natural selection would have eliminated them long ago The challenge for some time has been how to transform these informal musings about evolutionary epistemology into a rigorous theoretical discipline capable of complementing current scientific studies of the evolution of cognition with a philosophically defensible account of meaning and justification

Competition, Diversity and Economic Performance C. A. Tisdell,2013-02-01 Ecological and economic systems share some fundamental characteristics that Clem Tisdell has beautifully illuminated He has given us a much better handle on the roles of competition diversity evolution and sustainability in complex interdependent ecological and economic systems Our ability to build a sustainable and desirable future fundamentally depends on this integrated understanding Robert Costanza Portland State University US This thought provoking book explores the influences of market competition and diverse behaviours of economic agents on economic performance particularly dynamic economic performance Clem Tisdell illustrates within evolutionary dynamic and static contexts how diversity can improve or impede economic performance He addresses the fact the role of diversity in improving economic performance has been neglected by economic theorists by making economic diversity a focal point of economic analysis In particular special attention is given to the value of economic diversity and economic imperfections in improving the performance of economic processes in particular identified situations Limitations of using market like mechanisms for

managing public bodies and business firms are discussed and the value of business cooperation economic mutualism as a means for improving economic performance is examined It is also observed that as economies develop different forms of economic competition and business cooperation evolve Challenging yet accessible this book will prove a stimulating read for academics and students in the fields of economics industrial organization and business and management **From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms** Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection Paradoxically Darwins theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher s Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics

The ^AOrigin and Evolution of Cultures Robert Boyd, Peter J. Richerson, 2005-01-20 Oxford presents in one convenient and coherently organized volume 20 influential but until now relatively inaccessible articles that form the backbone of Boyd and Richerson's path breaking work on evolution and culture Their interdisciplinary research is based on two notions First that culture is crucial for understanding human behavior unlike other organisms socially transmitted beliefs attitudes and values heavily influence our behavior Secondly culture is part of biology the capacity to acquire and transmit culture is a derived component of human psychology and the contents of culture are deeply intertwined with our biology Culture then is a pool of information stored in the brains of the population that gets transmitted from one brain to another by

social learning processes Therefore culture can account for both our outstanding ecological success as well as the maladaptations that characterize much of human behavior The interest in this collection will span anthropology psychology economics philosophy and political science
