Stochastic Modeling In Economics And Finance:

Stochastic Modeling in Economics and Finance Jitka Dupacova,J. Hurt,J. Stepan,2005-12-30 In Part I the fundamentals of financial thinking and elementary mathematical methods of finance are presented The method of presentation is simple enough to bridge the elements of financial arithmetic and complex models of financial math developed in the later parts It covers characteristics of cash flows yield curves and valuation of securities Part II is devoted to the allocation of funds and risk management classics Markowitz theory of portfolio capital asset pricing model arbitrage pricing theory asset liability management value at risk The method explanation takes into account the computational aspects Part III explains modeling aspects of multistage stochastic programming on a relatively accessible level It includes a survey of existing software links to parametric multiobjective and dynamic programming and to probability and statistics It focuses on scenario based problems with the problems of scenario generation and output analysis discussed in detail and illustrated within a case study

Stochastic Modeling in Economics and Finance Jitka Dupacova,J. Hurt,J. Stepan,2014-01-15 **Stochastic Modeling in Economics and Finance** Jitka Dupacova,J. Hurt,J. Stepan,2002-08-31 Unlike other books that focus only on selected specific subjects this book provides both a broad and rich cross section of contemporary approaches to stochastic modeling in finance and economics it is decision making oriented The material ranges from common tools to solutions of sophisticated system problems and applications In Part I the fundamentals of financial thinking and elementary mathematical methods of finance are presented The method of presentation is simple enough to bridge the elements of financial arithmetic and complex models of financial math developed in the later parts It covers characteristics of cash flows yield curves and valuation of securities Part II is devoted to the allocation of funds and risk management classics Markowitz theory of portfolio capital asset pricing model arbitrage pricing theory asset liability management value at risk The method explanation takes into account the computational aspects Part III explains modeling aspects of multistage stochastic programming on a relatively accessible level It includes a survey of existing software links to parametric multiobjective and dynamic programming and to probability and statistics It focuses on scenario based problems with the problems of scenario generation and output analysis discussed in detail and illustrated within a case study Selected examples of successful applications in finance production planning and management of technological processes and electricity generation are presented Throughout the emphasis is on the appropriate use of the techniques rather than on the underlying mathematical proofs and theories In Part IV the sections devoted to stochastic calculus cover also more advanced topics such as DDS Theorem or extremal martingale measures which make it possible to treat more delicate models in Mathematical Finance complete markets optimal control etc Audience Students and researchers in probability and statistics econometrics operations research and various fields of finance economics engineering and insurance *Applied Stochastic Models and Control for Finance and Insurance* Charles S. Tapiero,2012-12-06 *Applied Stochastic Models and Control for Finance and Insurance* presents at an introductory level

some essential stochastic models applied in economics finance and insurance Markov chains random walks stochastic differential equations and other stochastic processes are used throughout the book and systematically applied to economic and financial applications In addition a dynamic programming framework is used to deal with some basic optimization problems The book begins by introducing problems of economics finance and insurance which involve time uncertainty and risk A number of cases are treated in detail spanning risk management volatility memory the time structure of preferences interest rates and yields etc The second and third chapters provide an introduction to stochastic models and their application Stochastic differential equations and stochastic calculus are presented in an intuitive manner and numerous applications and exercises are used to facilitate their understanding and their use in Chapter 3 A number of other processes which are increasingly used in finance and insurance are introduced in Chapter 4 In the fifth chapter ARCH and GARCH models are presented and their application to modeling volatility is emphasized An outline of decision making procedures is presented in Chapter 6 Furthermore we also introduce the essentials of stochastic dynamic programming and control and provide first steps for the student who seeks to apply these techniques Finally in Chapter 7 numerical techniques and approximations to stochastic processes are examined This book can be used in business economics financial engineering and decision sciences schools for second year Master s students as well as in a number of courses widely given in departments of statistics systems and decision sciences

Optimization in Economics and Finance Bruce D. Craven, Sardar M. N. Islam, 2005 Extends the optimization techniques in a form that may be adopted for modeling social choice problems The models in this book provide possible models for a society s social choice for an allocation that maximizes welfare and utilization of resources A computer program SCOM is presented here for computing social choice models by optimal control

Special Issue on Stochastic Models in Economics and Finance, 2005

Agent-Based Methods in Economics and Finance Francesco

Luna, Alessandro Perrone, 2012-12-06 This second book on financial and economic simulations in Swarm marks the continued progress by a group of researchers to incorporate agent based computer models as an important tool within their discipline It is encouraging to see such a clear example of Swarm helping to foster a community of users who rely on the Swarm framework for their own analyses Swarm aims at legitimizing agent based computer models as a tool for the study of complex systems A further goal is that a common base framework will lead to the growth of user communities in specific areas of application By providing an organizing framework to guide the development of more problem specific structures and by dealing with a whole range of issues that affect their fundamental correctness and their ability to be developed and reused Swarm has sought to make the use of agent based models a legitimate tool of scientific investigation that also meets the practical needs of investigators within a community

Mathematical Modeling in Economics and Finance: Probability, Stochastic Processes, and Differential Equations Steven R. Dunbar, 2019-04-03 Mathematical Modeling in Economics and Finance is designed as a textbook for an upper division course on modeling in the economic sciences The emphasis

throughout is on the modeling process including post modeling analysis and criticism It is a textbook on modeling that happens to focus on financial instruments for the management of economic risk The book combines a study of mathematical modeling with exposure to the tools of probability theory difference and differential equations numerical simulation data analysis and mathematical analysis Students taking a course from Mathematical Modeling in Economics and Finance will come to understand some basic stochastic processes and the solutions to stochastic differential equations They will understand how to use those tools to model the management of financial risk They will gain a deep appreciation for the modeling process and learn methods of testing and evaluation driven by data The reader of this book will be successfully positioned for an entry level position in the financial services industry or for beginning graduate study in finance economics or actuarial science The exposition in Mathematical Modeling in Economics and Finance is crystal clear and very student friendly The many exercises are extremely well designed Steven Dunbar is Professor Emeritus of Mathematics at the University of Nebraska and he has won both university wide and MAA prizes for extraordinary teaching Dunbar served as Director of the MAA s American Mathematics Competitions from 2004 until 2015 His ability to communicate mathematics is on full display in this approachable innovative text

The Oxford Handbook of Computational Economics and Finance Shu-Heng Chen, Mak Kaboudan, Ye-Rong Du, 2018 The Oxford Handbook of Computational Economics and Finance provides a survey of both the foundations of and recent advances in the frontiers of analysis and action It is both historically and interdisciplinarily rich and also tightly connected to the rise of digital society It begins with the conventional view of computational economics including recent algorithmic development in computing rational expectations volatility and general equilibrium It then moves from traditional computing in economics and finance to recent developments in natural computing including applications of nature inspired intelligence genetic programming swarm intelligence and fuzzy logic Also examined are recent developments of network and agent based computing in economics How these approaches are applied is examined in chapters on such subjects as trading robots and automated markets The last part deals with the epistemology of simulation in its trinity form with the integration of simulation computation and dynamics Distinctive is the focus on natural computationalism and the examination of the implications of intelligent machines for the future of computational economics and finance Not merely individual robots but whole integrated systems are extending their immigration to the world of Homo sapiens or symbiogenesis
