The Enigmatic Photon Volume 5 O3 Electrodynamics:

The Enigmatic Photon M.W. Evans, Jean-Pierre Vigiér, 1994 The first part of this fifth volume of The Enigmatic Photon consists of three chapters which develop electrodynamics as a gauge field theory with internal $O(3)$ symmetry using a complex basis $1, 2, 3$. This is referred to for convenience as $O(3)$ electrodynamics. The field equations are intrinsically non linear and non Abelian and the classical potential is a physical quantity. The field equations are shown to be self consistent and a general mathematical basis for the development is given in terms of extended Lie algebra. The third chapter develops radiatively induced fermion resonance RFR. The opening three chapters are followed by a selection of previously unpublished scientific papers which trace the historical development of $O(3)$ electrodynamics through the physically observable $B(3)$ field. The editors are greatly indebted to Dr Laura J Evans for her painstaking preparation of Part I and Part II of this volume. This work included typesetting from original manuscripts and indexing. The production of the five volumes of this series would not have been possible without her steadfast and generous contributions. Discussions with many colleagues over internet sharpened the ideas behind this volume. Finally the organizational support of the Alpha Foundation founded by Milan Meszaros proved invaluable during the later preparatory stage.

The Enigmatic Photon M.W. Evans, J.P. Vigiér, 1994-08-31 This book is the first of two volumes devoted to the photon. Volume 1 presents the first systematic development of the fundamental magnetizing field of electromagnetic radiation the field $I(3)$. The book has 12 chapters which collectively describe the properties of $I(3)$ in a vacuum and in the interaction of light with matter. Volume 2 deals with the development of non Abelian or $O(3)$ electrodynamics in which $I(3)$ is incorporated systematically. For researchers and graduate students interested in the theory of electromagnetic radiation. **Mathematical Reviews**, 1999 **The Enigmatic Photon**, 1994 *The Enigmatic Photon* M.W. Enigmatic Photon Volume 1 The Field IX 3 SUP EM Kluwer Academic Publishers 1994 which presented the first systematic development of the fundamental magnetizing field of electromagnetic radiation the field Ii 3 Its 12 chapters collectively describe the properties of Ii 3 in a vacuum and in the interaction of light with matter The present volume deals with the development of the theory of the Evans Vigier field Ii 3 It opens with the derivation of the novel field Ii 3 from the Dirac equation of relativistic quantum field theory The existence of Ii 3 in the vacuum means that the gauge group of electromagnetism becomes 0 3 the group of rotations This is non Abelian and so requires a self consistent development of the vacuum Maxwell equations themselves The role of Ii 3 is discussed in unified field theory and quantum electrodynamics The classical vacuum field Ii 3 is a novel fundamentally important feature of electrodynamics which indicates that the particulate photon carries mass thus settling a longstanding debate in favour of protagonists of photon mass For researchers and graduate students interested in the theory of electromagnetic radiation

Volume 3 of The Enigmatic Photon develops the theory and practical applications of the B 3 field The opening chapters are based on the Dirac equation of a single fermion in a circularly polarized electromagnetic field an equation which defines the way in which B 3 interacts with matter These chapters predict the theoretical possibility of nuclear magnetic resonance at infrared and visible frequencies The third chapter considers the optical Aharonov Bohm effect due to B 3 and suggests a mechanism for action at a distance in electrodynamics Subsequent chapters discuss the radiation theory of B 3 and relate it to the theory of fine photon mass The final two chapters treat the theory of B 3 in cosmology and summarize future experimental developments This book is a sequel to Volume 1 The Field B 3 which presents the first systematic description of the fundamental magnetizing field of electromagnetic radiation and Volume 2 Non Abelian Electrodynamics which deals with the development of the theory of the Evans Vigier field B 3 Audience This book will be useful to researchers whose work involves nuclear magnetic resonance *Who's who in America*, 2003 The Enigmatic Photon, 1996-01-01 Volume 3 of The Enigmatic Photon develops the theory and practical applications of the B 3 field The opening chapters are based on the Dirac equation of a single fermion in a circularly polarized electromagnetic field an equation which defines the way in which B 3 interacts with matter These chapters predict the theoretical possibility of nuclear magnetic resonance at infrared and visible frequencies The third chapter considers the optical Aharonov Bohm effect due to B 3 and suggests a mechanism for action at a distance in electrodynamics Subsequent chapters discuss the radiation theory of B 3 and relate it to the theory of fine photon mass The final two chapters treat the theory of B 3 in cosmology and summarize future experimental developments This book is a sequel to Volume 1 The Field B 3 which presents the first systematic description of the fundamental magnetizing field of electromagnetic radiation and Volume 2 Non Abelian Electrodynamics which deals with the
