The Environment, Our Natural Resources, and Modern Technology Thomas R. DeGregori, 2008-06-02 Always controversial, Thomas DeGregori has released another classic volume that is sure to inform, confound, and present new perspectives on today's environmental issues. This time he is taking on the environmentalists, naturalists, green consumerists, and those that hail the natural lifestyle as the healthy, politically correct thing to do. DeGregori examines the economics of green consumerism, the reality of saving the environment, how historical cultures may have influenced environmental damage, and how being ecologically correct may have a more damaging effect on our environment. Not just a regurgitation of theories, DeGregori offers real time strategies and alternatives to enhance our natural resources and our environment in harmony with today's modern technology. This is the book everyone will be talking about for years to come.

Final Environmental Statement for the Geothermal Leasing Program: Leasing of geothermal resources in three California areas United States. Department of the Interior, 1973 The Environment Chris Park, 1997 The very survival of the planet is at risk: human misuse of natural resources and disturbance of natural environmental systems is pushing the Earth to the limits of its capacity. This is an introduction for environmental study explaining how the environment functions, how environmental systems relate, and the ways in which people and environment interact. Focusing particularly on the environmental impacts of human activities, the book explains the ways in which an understanding of basic physical principles can help us to use the environment and its resources. Three particular approaches are adopted throughout: a systems approach highlighting the interactions and interrelationships between the environment's diverse parts; an interdisciplinary perspective stepping back from individual subject focus to examine the complex breadth of the environment's diversity; and a global perspective incorporating stimulating examples drawn from around the world to illustrate broad global patterns and contrasts.
