**Energy Abstracts for Policy Analysis** ,1984-07      **Perspectives on Management Capacity Building** Beth W. Honadle, Arnold M. Howitt, 1986-01-15 Perspectives on Management Capacity Building provides a lively spectrum of views on the problems and prospects of improving the management and performance of municipal governments in the United States Leading specialists in public administration probe the management needs of local governments and explore ways in which they can improve their capacity to manage Today state and local governments are caught in the transition between the expansionism of the post World War II years and the retrenchment era of the late seventies and eighties Improved management capacity has emerged as the most effective way for local governments to ride out the economic and political pressures confronting them This book first investigates the meaning of the term management capacity It then considers how management needs have changed in the post war period and how these needs vary among large cities suburbs and rural communities Two of the contributions explore the organizational politics of management improvement while others look at the functional areas of computers and financial management The book also addresses human resource problems such as labor relations management development and training of municipal legislators and concludes with several viewpoints on federal efforts to improve local management capacity      *Energy* Joseph Russell Rudolph, 1995 A road map for the novice researcher contemplating the broad field affected by and concerned with energy      **Contemporary Issues in African Administration and Development Politics** ,1990      **ERS Staff Report** ,1994      **Regulatory Choices** Richard J.

Gilbert, 2023-11-15 Regulatory Choices offers the first comprehensive economic history of energy policy and its consequences for California where some of the most innovative and far ranging programs of regulatory reform have originated The authors of this volume have gathered together an impressive wealth of material about actual policy decisions and their repercussions and have subjected their findings to astute economic analysis This book will serve for years to come as an invaluable

reference on the costs and effects of various energy policies With its focus on bringing prices in alignment with the true cost of producing power and delivering it to the customer the first part of the book outlines the issue of setting utility rates and considers some of the proposals to provide regulated industries with incentives to respond to economic and environmental concerns The problems of energy supply occupy the second part of the book which includes a survey of the costs of alternative energy sources and estimates of their environmental impacts as well as a case study of the construction of the Diablo Canyon nuclear power plant The book concludes by documenting the results of subsidy programs that were designed to target the development of wind power and residential energy conservation Regulators we learn have a mixed record when it comes to managing the production of energy Some conservation programs have enjoyed considerable economic success particularly those that correct a lack of consumer information Others such as the renewable energy tax credits or programs designed to subsidize new technologies have cost much more than the value of the energy they have saved What emerges clearly from this study is that regulated industries are not immune from the forces of competition This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1991 *State & Local Government Review*, 1985 **Elgar Encyclopedia of Energy Economics** Angeliki

George Philander, 2012-06-13 The First Edition of the Encyclopedia of Global Warming and Climate Change provided a multi authored academic yet non technical resource for students and teachers to understand the importance of global warming to appreciate the effects of human activity and greenhouse gases around the world and to learn the history of climate change and the research enterprise examining it This edition was well received with notable reviews Since its publication the debate over the advent of global warming at least partially brought on by human enterprise has continued to ebb and flow depending literally on the weather politics and media coverage of climate summits and debates Advances in research also change the discourse as new data is collected and new scientific projects continue to explore and explain global warming and climate change Thus a new Second Edition updates more than half of the original entries and adds new perspectives and content to keep students and researchers up to date in a field that has proven provocatively lively **Energy Research Abstracts**, 1979 *Bulletin of the Atomic Scientists*, 1983-08 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by Manhattan Project Scientists the Bulletin's iconic

Williams,2012-12-06 Since the beginning of industrialization in the last century a steady increase in energy consumption can be observed At the same time energy generation switched from wood and coal to predominantly oil coal and natural gas Soon many countries became aware of the fact that the resources of fossil fuels especially of oil and natural gas are finite Diversification of energy sources became a requirement for the future Governments expressed their concern by setting up natural energy programmes while international organisations undertook assessments of the global energy resources and possible rates of supply and substitution When it comes to setting up energy policies the following factors must be taken into consideration population growth level and nature of socio economic activity the costs of energy the adequacy and reliability of supply the availability of technology and supporting infrastructure the success of energy conservation programmes and concern about the environment safety aspects of production and use of energy as well as educational efforts toward a rational use of energy When we express our most urgent concern the long term global energy provision experts offer four interrelated partial strategies the strategy of rational use and conservation of energy the strategy of using renewable energy sources the coal strategy including coal gasification and liquefaction the nuclear power strategy Any strategy however for securing future energy supply has from my point of view to be thoroughly examined as to its impact on the environment
