Out of Time Julian Johnson,2015-02-27 What does music have to say about modernity How can this apparently unworldly art tell us anything about modern life In *Out of Time* author Julian Johnson begins from the idea that it can arguing that music renders an account of modernity from the inside a history not of events but of sensibility an archaeology of experience If music is better understood from this broad perspective our idea of modernity itself is also enriched by the specific insights of music The result is a rehearing of modernity and a rethinking of music an account that challenges ideas of linear progress and reconsiders the common concerns of music old and new If all music since 1600 is modern music the similarities between Monteverdi and Schoenberg Bach and Stravinsky or Beethoven and Boulez become far more significant than their obvious differences Johnson elaborates this idea in relation to three related areas of experience temporality history and memory space place and technology language the body and sound Criss crossing four centuries of Western culture he moves between close readings of diverse musical examples from the madrigal to electronic music and drawing on the history of science and technology literature art philosophy and geography Against the grain of chronology and the usual divisions of music history Johnson proposes profound connections between musical works from quite different times and places The multiple lines of the resulting map similar to those of the London Underground produce a bewildering network of plural connections joining Stockhausen to Galileo music printing to sound recording the industrial revolution to motivic development steam trains to waltzes A significant and groundbreaking work *Out of Time* is essential reading for anyone interested in the history of music and modernity

Images and Ideas in Modern French Piano Music Siglind Bruhn, 1997 In our visually oriented society music appears to stand apart from other arts Yet just as a poet can write a poem whose focus is a painting so musicians have composed scores based on poems paintings and other non musical art forms In instrumental music such reinterpretations are especially intriguing as the verbal or visual stimulus does not appear in performance but is rendered in musical form In this study Siglind Bruhn investigates how three French composers of the twentieth century Claude Debussy Maurice Ravel and Olivier Messiaen express extra musical subtexts in their piano works She shows how the relation between the subtexts and the musical works can be broadly categorized in terms of pictoriality and interiority In all cases Bruhn analyzes each musical piece and each source text in its entirety and in depth drawing on her broad background in both literary and musical interpretation of the twentieth century For pianists who seek to better understand an individual work for scholars in the growing field of musical hermeneutics and for lovers of music in general this volume explores and makes explicit connections between music and other arts
