Food Product Design Ruguo Hu, 2017-10-19 Statistical experimental design is currently used as a quality control technique to achieve product excellence at the lowest overall cost. It can also function as a powerful tool to optimize food products and/or processes to accelerate food development cycles, reduce research costs, facilitate the transition of products from research and development to manufacturing, and troubleshoot manufacturing problems. *Food Product Design: A Computer Aided Statistical Approach* familiarizes readers with the methodology of statistical experimental design and its application in food product design with the aid of commonly available modern commercial software. *Food Product Design* presents basic concepts of food product design, then focuses on the most effective statistical techniques and corresponding computer applications for trial design, modeling, and experimental data analysis. The book presents very few theories about mathematics and statistics. Instead, it contains detailed descriptions of how to use popular computer software to solve the real mathematical and statistical problems that occur in product design. Even those with very limited knowledge of statistics and mathematics will find this a useful and highly practical book. *Food Product Design: A Computer Aided Statistical Approach* will be a valuable tool for professional food engineers, technologists, scientists, and industrial personnel who want to update and expand their knowledge about computer-aided statistical methods in the field of food product design. Those involved in applied research at universities in food and agriculture, biological and chemical engineering, and statistics will also find it useful and informative.

Professional Identity in the Caring Professions Roger Ellis, Elaine Hogard, 2020-12-29 Professional identity is a central topic in all courses of professional training, and educators must decide what kind of identity they hope their students will develop, as well as think about how they can recruit for, facilitate, and assess this development. This unique book explores professional identity in a group of caring professions, looking at definition, assessment, and teaching and learning. *Professional Identity in the Caring Professions* includes overviews of professional identity in nursing, medicine, social work, teaching, and lecturing, along with a further chapter on identity in emergent professions in healthcare. Additional chapters look at innovative approaches to selection, competency development, professional values, leadership potential, and reflection as a key element in professional and interprofessional identity. The book ends with guidance for curriculum development in professional education and training and the assessment of professional identity. This international collection is essential reading for those who plan to deliver and evaluate programs of professional training, as well as scholars and advanced students researching identity in the caring professions, including medicine, nursing, allied health, social work, and teaching.

On-line Analytical Processing Systems for Business Robert J. Thierauf, 1997-09-30 On line analytical processing OLAP is clearly a new approach to information system technology offering a much needed way to make informed decisions better and faster One of its most important characteristics is multidimensional analysis analysis that goes beyond the conventional two dimensional analysis and provides users with rapid retrieval of data from organizational databases data warehouses or both Not only that but most importantly says Dr Thierauf it allows users to look at different dimensions of the same data thus enabling them to do analyses across departmental and even corporate boundaries How it works and OLAP's many benefits to aid users in the public and private sectors is spelled out here comprehensively yet concisely and with the author's customary well developed examples and clear prose His book will be important reading for people at all levels of management and in all types of organizations Another way of viewing OLAP is getting a typical company out of the custom report writing business and into the data cube server building business An OLAP data structure can be thought of as a Rubik's Cube of data that users can twist and twirl in different ways to work through what if and what happened scenarios to get at

the whys of the situation Within an OLAP environment the focus is on performing dictionary definition and maintenance as well as mapping flat files or relational columns to dimensions and measures Although this may sound like a lot of work managing one data cube is more efficient than writing a number of custom reports Currently some vendors provide administrative tools to get the data into the cubes in the first place in the proper form and on a regular basis Hence the job of managing data has been simplified for users
